

Building Games for the Next Consumer Mega Trend: Wearable Technology

Shawn Hardin

Co-founder & CEO, Mind Pirate

Unni Narayanan

Co-founder & VP, Game Prod/Ops, Mind Pirate

The logo for GDC 13 NEXT. It features the letters 'GDC' in a large, bold, sans-serif font. The number '13' is enclosed within the circular part of the 'O'. Below 'GDC' is the word 'NEXT' in a similar bold, sans-serif font. The background of the slide is a vibrant blue and cyan abstract design with glowing lines and shapes, including a stylized eye icon and a 'F2P' label.

Mobile, Pervasive & Laden With Sensors

Form Factors in Wearable Technology

MindPirate

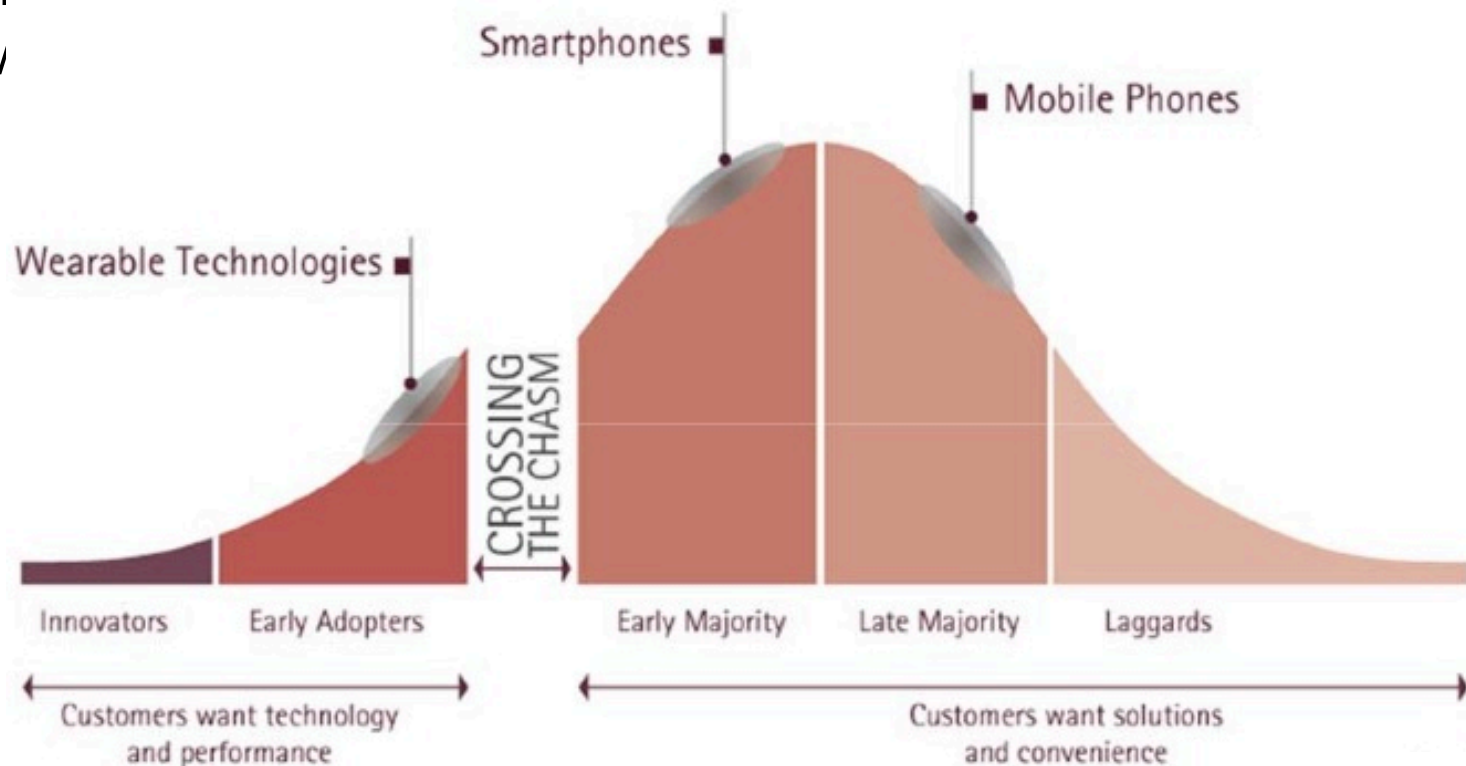

The Wearable Market Is Growing Fast....

- ü **\$19B Market by 2018** (up from only \$1.4 billion this year*)
- ü **Compounded annual growth of 50%+** for the foreseeable future**
- ü **64 million units in worldwide shipments** of wearable devices in 2017 (3.1M in 2011, 8.3M in 2012)**
- ü **Entertainment/Games/Multimedia applications to capture over 50% of \$5.2 billion dollar AR market by 2017***

Source: *Juniper Research & ** Berg Insight

Poised To Cross The Chasm To Mass

- 30 million devices sold in 2012
- Innovative companies are fast creating new gadgets and solutions
- Many industries, especially healthcare, fitness and games/entertainment are primed to grow dramatically over the next tv

Smart Glass & Smart Watch Market

Rich Platforms For Games

- **80M smart watches by 2016***
 - *15M units expected to ship next year*
 - *Up from 5 million this year*
- **10M smart glasses by 2016****

6.6M units expected to ship in 'one

Sensor-Enabled Wearable Attributes

New Technology For A New Market

CALLISTO is a moon of Jupiter (and Mind Pirate's Tech/Game Platform)

- Callisto is the first and only tightly integrated client-side and server side game-focused platform that supports leading mobile and wearable devices
- Enables developers to create engaging experiences that merge the virtual and physical worlds
- Takes full advantage of the native capabilities of the underlying hardware

Key Market Drivers

Cloud Computing

Micro Engagement

Multi-Platform

Rule #1 – Design for the Cloud

- User Generated Content will explode on Wearable Devices
- Cross Platform Push
- Shared Game Space

#2 – Design for Micro-Engagement

- Wearable Apps Always On (but, not player!)
 - Battery life on wearable is limited
- Design Solutions:
 - Notif based engagement
 - Rich 1–2 minute experiences

#3 – Design for Cross Platform

- Write Code Once!
- Wearable apps might be Distributed

Use the Rules for the Tools

Features	Unity	<u>Cocos</u>	Havoc	Parse	AWS	GAE
Cross Platform						
<i>Script</i>	✓		✓			
<i>Distributed</i>						
Micro-Engagement						
<u><i>Notif Based</i></u>						
Cloud						
<i>UCG</i>				✓	✓	✓
<i>Push</i>				✓	✓	
<i>Shared Game Space</i>				✓		

Case Study: Callisto Architecture

Client Side

LUA Scripting (Device Independent)

C++

JAVA

OBJ C

Server Side

Cross Platform Push

Shared Game Space

Analytics and Services

Hypothetical Case Study – Game Description

- Multiplayer Ballistics Game
 - MMO
 - Smartphone, Smartglass, and Smartwatch
 - Turn Based
 - Users use catapults to fling rocks at one another

Back End / Server Side

- Players need to initiate notifs
- Universal leaderboards

So, how do you create a shared game space

Back End/Server Side – Solution

- Robust Server Infrastructure:

- Support cross OS push (Android APNs and iOS push notifs)
- Lobbys and administration for MMO
- Streaming of sensor data for wearables

**Principle #1:
DESIGN FOR the
Cloud!**

Core Interactions

- Smart Glass
 - People are grounded in a physical space and will have limited time to stare at a small screen
 - Glass has limited battery life

So, how do you keep the user engaged

Core Interactions – Solution

- Make the game “notif” based
- Initiate Game at Intermediate Points with State

Principle #2:
DESIGN FOR Micro-Engagemen

Client Side & U/X

- Smart Glass
 - Touch pad replaces touch screen
 - Different Gyroscope Behavior
 - Limited Screen Size
- Smart Watch
 - Touchscreen
 - Tether to smartphone?

**So, how do you pilot the
Damn Rock
and write code just once?**

Client Side & U/X – Solution

- Create a “Virtual Joystick Controller”
- In Glass, the head is the joystick
- In Smartwatch, the entire watch is the joystick
- Both Glass and SmartWatch have a symbiotic relationship with SmartPhones

Principle #3
DESIGN FOR CROSS PLATFORM

Key Takeaways

- Wearable Computing implies a complex device ecosystem
- Game Creation on both the Design and Programming side has to anticipate these challenges
 - Cross Platform
 - Micro Engagements
 - Shared Game Spaces
- Exciting new tools to simplify implementation on the horizon

- ü The first-ever program focused on developing games and consumer apps for the emerging wearable consumer market
- ü Participants will use Mind Pirate's Callisto technology
- ü Created by the Canadian CFC Media Lab and Silicon Valley-based Mind Pirate
- ü A three month boot camp for developers and companies that want to navigate the incredible potential of games on the next consumer mega trend of wearable technology

Finalists Announced For Wearables Workshop

Developers from around the world applied to join the IdeaBOOST/Mind Pirate Production Lab and the following outstanding companies are all finalists for the Lab:

- Normative
- Imaginary
- XMG Studio Inc.
- Little Guy Games
- Race

Yourself (glassfitgames.com)

- NeoBird GmbH & Co
- Social Game Universe
- Smokebomb Entertainment
- Hammerspace
- Wero Creative

Cross-Platform Game Development
