Always Be Prototyping

Observation:

VR is not a Medium

InTouch

Hiroshi Ishii

1998

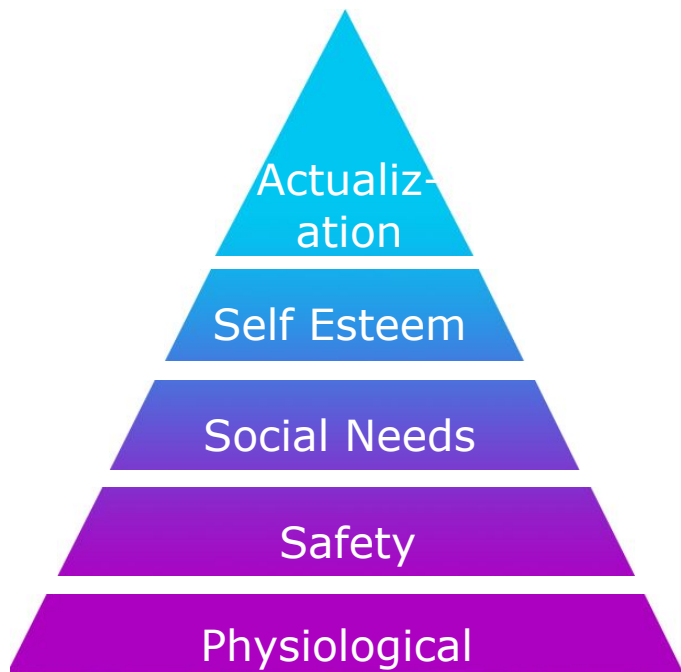

Observation:

VR Could Use *a* Maslow's Hierarchy

Maslow's VR Benchmark

Observation:

Our Body Has an LOD

Here, Near, Far

- Our body is hella granular.
- Periphery granular by proxy.
- Things within our reach and obstacles are cached closer to our CPU.

The Design and Construction of
Facilities for Handling Cattle

Focus Handoff

Same Trick as in Magick and VFX.

1. Form a path for recovery
2. Create Distraction
3. Do the Thing™
4. Continue like nothing happened.

Focus Handoff

- **Smoke Covers User:**
Visual field gone,
Orientation remains
- **Rumbling Floor:**
Orientation lost
momentarily
- **Wind (Machine)
Changes Direction:**
User Accepts new
orientation

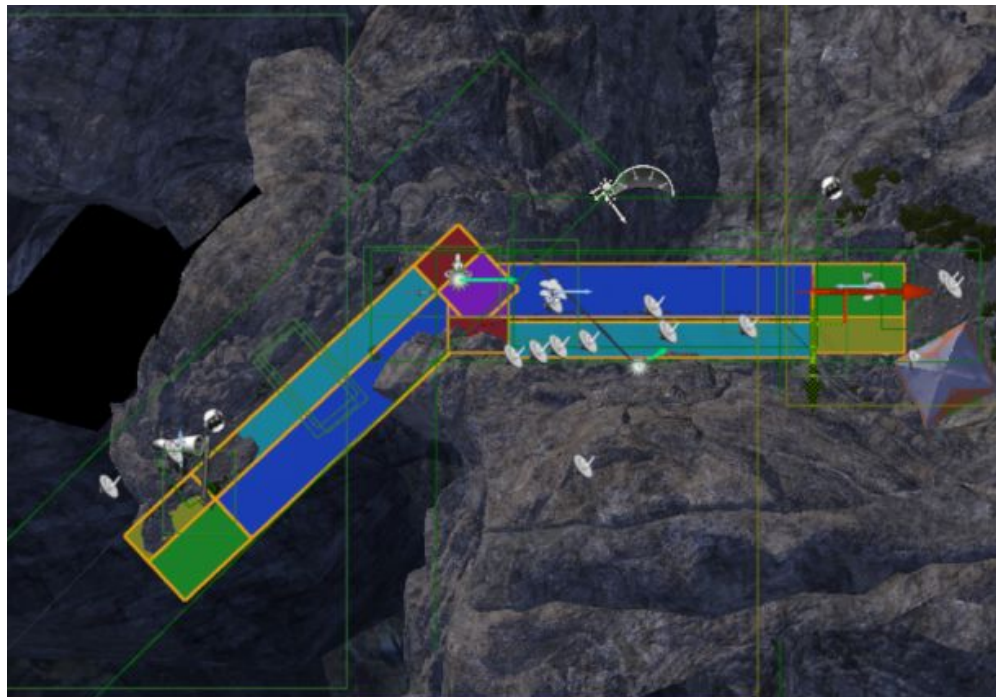

1-Step Redirected Walking

VR turn: 50°

R turn: 180°

Focus Handoff 🤞

NVIDIA VR Funhouse

- Started as a physics experiment
- Discovery: Physics alone is an interesting VR interaction
- Effort spent on adapting playground to human body

Freedom is too Free

- Realistic + Expressive = Potential distraction.
- Had to come up with a constraint
- **Metric:** Time spent on intended purpose vs time spent exploring.

Observation:
**The Only Thing to
Figure Out in VR is
What People Want to
do in VR.**

-Greg Borenstein

Expressivity Ratio

Let α be an action we can perform IRL and in VR.

$$\text{Expressivity } E(\alpha) = \frac{\text{Time to complete } \alpha \text{ IRL}^1}{\text{Time to complete } \alpha \text{ in VR}}$$

¹ with the best tool in this context.

“The Leatherman Problem”

Let A be your entire set of actions.

Minimize $|A|^1$ While maximizing $E(a)$ for each action in the *Near* context.

1 The amount of actions in A

Observation:

**“What Does it Feel
Like?” Is a Question
You Can’t Answer**

The Role of Prototypes

- Solving Parallel Problems in Sync
 - Reality checks
 - Creative blocks
- Cheap, Fast, Flexible
 - Starts Earlier than you think
 - Promise First, Implement later

Storyboarding

- Resolves Placement and Pacing
- Simple enough to iterate on the spot

Martin Scorsese's Storyboards for
"Taxi Driver"

Spherical Storyboarding

Carol: Dearest...

Studio: **Fake Love**

Client: New York Times

Brand: Weinstein Company

Paper Prototyping

- Debugging game logic without writing code
- Moving buildings that don't exist
- **Discovering a player's emotional gamut**

Dead Reckoning

- **Designer is blindfolded**, points at POIs
- Helpers have **post-it notes**, tag POIs
- POIs replaced by objects
- **Only the Designer speaks.**
- Helpers sketch the design **as 3rd person.**

Mattress platform

Kitten

Dead Reckoning

- **First timers can design VR with precision**
- Experts can detect problems
- Iteration time: 15-20mins
- Execs don't get weirded out by it

Observation:

**A Nonlinear Experience
is Piecewise-Linear.**

Piecewise-Linear: Villa Savoye

Emotional spaces connected by paths.

Piecewise-Linear: Yad Vashem

Piecewise-Linear: Assembly

The image is a screenshot of a WikiHow article page. At the top, there is a green header with the 'wikiHow' logo and the tagline 'to do anything...'. To the right of the header is a search bar with a magnifying glass icon and an 'EDIT' button with a pencil icon. Below the header, there is a navigation bar with links for 'Article', 'Edit', and 'Discuss'. On the right side of this bar are links for 'Home', 'Categories', and 'Sport'. The main content area has a title 'wikiHow to Load a Shotgun' with an 'Edit Article' link to its right. Below the title, there is a section titled 'Two Methods:' followed by two links: 'Loading a Pump-Action Shotgun' and 'Loading a Break-Action Shotgun', and a link for 'Community Q&A'. The first paragraph of the article text reads: 'Shotguns are popular around the world for hunting, shooting sports and home defense. They fire shells of metal shot that are usually loaded one at a time, instead of in a clip. While shotgun technology has advanced over the years, loading most shotguns is still a simple task.'

Summary

Prototyping Golden Rules

- Simpler == Faster == Better.
- Don't emulate reality - it's already there
- Work with the least stimulation.
- Shift focus between linear objects.
- Plan the emotional graph.
- Build unshippable demos.

Experience Metrics

- Is it **Coherent**? (Here, Near, Far)
- Does it satisfy **Maslow's Hierarchy**?
- Is **expressivity** balanced w/ **interest**?
- Is *anything* in the way of **Proprioception**?

One More Thing:
**People will always tell
you that a medium is
finally stable.**

VRDC
