- Evolution of Verse
- The Neymar Jr Effect.
- SyFy : The Expanse – The Canterbury
- SyFy : The Expanse – Tycho Station & The Nauvoo
- VS Media : Li Yu Chun – Open Up Music Video
- SyFy : Incorporated – Welcome to the Quiet Room

And many monoscopic 360 live action projects, streaming and on demand.

Latest project is the NBA VR app for Google Daydream platform, streaming high fidelity stereoscopic interviews with NBA Legends every week.

Lots of upcoming interactive narrative VR experiences this year.

A photograph of Neymar Jr. in a yellow Brazil national team jersey, dribbling a soccer ball on a green field. The image is slightly blurred to convey motion. In the background, a stadium crowd and a banner with the text "EXPERIENCE BY NIK" are visible.

The Neymar Effect

for Nike

Presented as 360° .mp4 VR on Nike app and Youtube

Technical Details:

- One ARRI Alexa (3K) as main camera
- Two Codex ActionCams (HD) as stereo witness cameras
- Three RED Dragons (4K) as set witness cameras
- Two 360° GoPro camera arrays (5.5K) as motion control rig witness camera
- One 360° GoPro camera array (5.5K) as unicorn (head mounted camera)

Recorded at 90 fps (89.91 actual). GoPros and ActionCams at 60fps (59.94 actual)

Two greenscreen stages.

Three day shoot, 80 terabytes of data.

Four month post schedule for 90 seconds of final VR piece.

FROM EXECUTIVE PRODUCERS
BEN AFFLECK AND MATT DAMON

INCORPORATED

SERIES PREMIERE
DECEMBER 1

Syfy

SyFy: Incorporated

“Welcome to the Quiet Room”

First Delivery for SyFy at San Diego Comic-Con on the HTC Vive

Second Delivery for Facebook 360 and YouTube 360

Challenges:

- Creative
- Real-time positional tracking combined with live action, on set capture
- Resources
- Time (one month, production shoot to activation)

The Quiet Room

- Two RED Dragons (6K) as main camera
- One Sony A7s2 (4K) as set witness
- Velodyne HDL-32E laser scanner

Recording at 29.97fps

One day shoot

Final length of content: Three minutes

The Quiet Room

Assets built using our VR / VFX Pipeline

- Substance
- Maya
- Track (internal Digital Domain software)
- Nuke (custom toolsets)
- Agisoft
- RealityCapture

Runtime

- Unreal

Main Camera Setup

RED Dragon 6K
3ality stereo rig
8mm fisheye lenses
Custom Ubangi mount to tripod
Timecode synced @ 29.97 fps

Witness Setup

Velodyne HDL-32E

Spinning at 1200rpm, capturing 700,000 points / second

Synced to A7s2 recording 4K @ 29.97 fps with a
Custom LTC to GPS timecode hardware package

Appropriately covered in green.

Overlaying photogrammetry and geometry from LIDAR

A single WMV contained

- RGB (bottom)
- Alpha (left)
- Depth (right)
- 2048x2048
- 29.97fps
- Single channel audio
- Three minutes long

Times two (secondary character!)

Rotomation

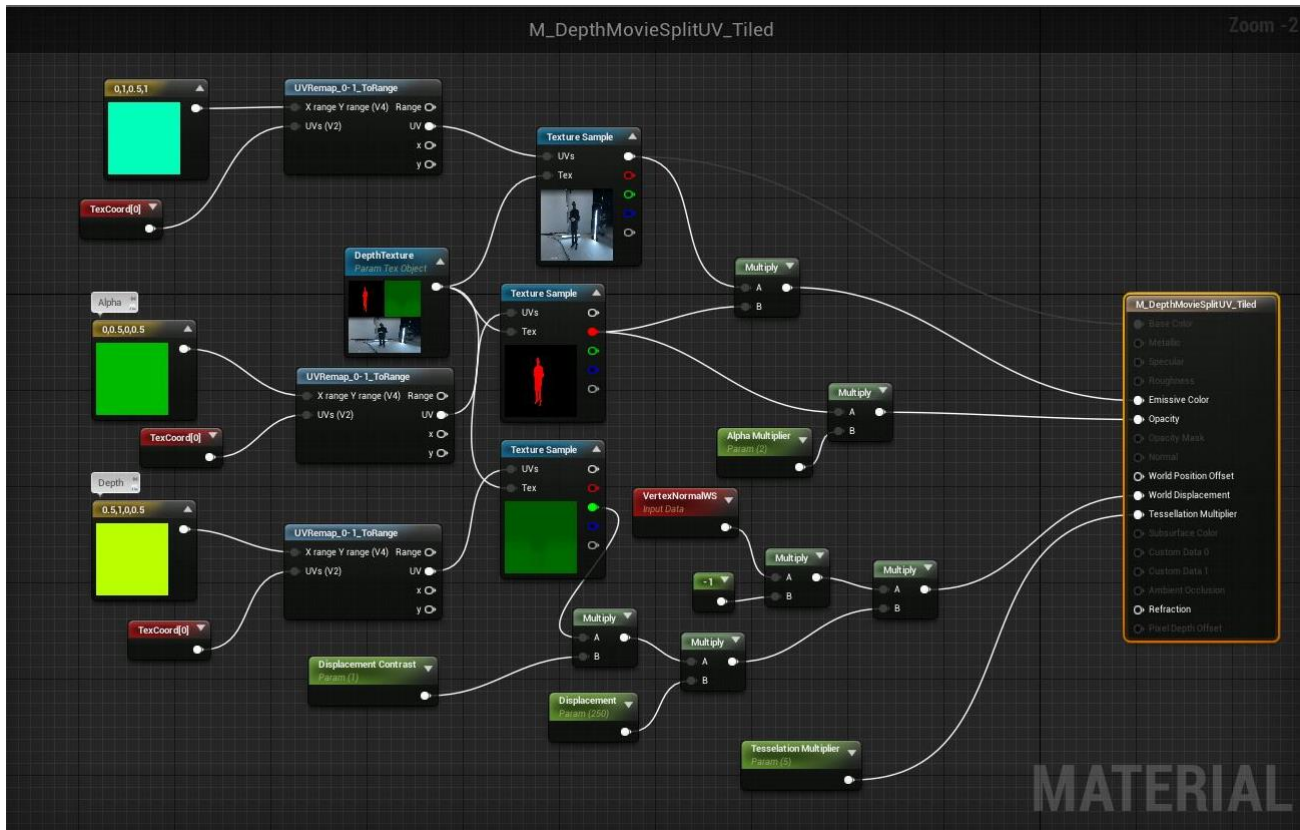

Animated in Maya using point cloud data and stereo as a guide
Simple rigged persons of both main actor (Dennis Haysbert) and secondary character (shown here)

Using both depth from two cameras and this rotomation, we were able to pinpoint exactly where actors were in the live action set

From there, just plug into Unreal, and just run in real-time!

If we had more time

- Create physical model of actor (on-set Photobooth)
- Matchmove (rotomate) it to the physical performance
- Use live action head for photo-real quality, instead of full body
 - This would allow a real performance, with an animated stereoscopic body
- Vive Trackers on feet and hands would increase immersion
 - We were going down this path and had an effective solution with the HTC Wands, but removed the functionality in the final build

Digital Crew

- **Executive Producer:** Andrew McGovern
- **Live Action Set Producer:** Somyung Richmond
- **Digital Producer:** Peter Nelson
- **CG Supervisor:** Ron Herbst
- **Unreal Lead Programmer:** Julia Lou
- **Assets (Unreal, Maya, Substance):** Joseph Caddell, Ferdinand Vasquez
- **Compositing:** Jason Selfe, Lenz Kol
- **Tracking:** Jon Aghassian
- **Animation:** Kevin Culhane
