GAME DEVELOPERS CONFERENCE<sup>®</sup> | FEB 27-MAR 3, 2017 | EXPO: MAR 1-3, 2017 #GDC17

#### **Top 3 Firestarters**

Because It's There

Beware The Goalie Playing Out

Too Many Heroes

#### Because It's There

#### **Common Reasons**

- Why reinvent the wheel?
- We don't have time to build a new AI
- A new AI would be risky

# Cognitive Bias

- Anchoring Bias
- Loss Aversion
- Sunk Cost Fallacy
- Well Travelled Road

### Medal of Honor<sup>™</sup> Heroes 2

predictable
spatial triggers
quick reaction
performance

## Medal of Honor<sup>™</sup> Heroes 2

#### ARTIFICIAL INTELLIGENCE SUMMIT

## Medal of Honor<sup>™</sup> Heroes 2

• performance

design

#### fuzzy FSM

- •unpredictable
- no support for spatial triggers
- quick reaction
- performance

#### • predictable

- spatial triggers
- variable
- moderate performance

scripted system

## The Signs of Fire

ATTITUDE It's not the problem that's the problem. Your attitude about the problem is the problem. Savy?

- Hacks to the system: 'new functionality'
- Bypassing advantage of the system
- Lots of interrupts
- Constant tuning

#### ARTIFICIAL INTELLIGENCE

								Runtime		
					How it Scales	How it Scales		Performance		
			Emergence /	Opportunistic	with World State	with Number	Easy to Create	with Large	Easy for Anyone to	
Al System 🔽	Reactive Speed 🖵	Stateful 🗾	Unpredictable 💌	Behavior 🔹	Complexity 🔽	of Agents 💌	Variants 🔹	Data 💌	Author Data 🛛 🔽	Planning 🔽
Decision Tree	high	no	none	low	high	moderately	no	low	yes	no
Utility Function	high	variable	variable	high	high	yes	yes	high	moderately	no
Fuzzy System	high	yes	moderate	low	moderate	yes	yes	high	hard	no
Neural Network	high	no	high	high	moderate	not well	no	high	hard	no
Production Rules	high	no	high	high	moderate	moderately	yes	high	moderately	variable
GOAP	low	yes	high	high	moderate	not well	no	low	hard	yes
Behavior Tree	medium	yes	low	high	moderate	not well	yes	medium	moderately	no
FSM / hFSM	medium	yes	none	low	low	yes	no	high	yes	no
Partial Order										
Planner	medium	no	high	high	moderate	moderately	no	high	hard	yes
HTN Planner	medium	yes	high	high	moderate	moderately	no	medium	hard	yes
Script System	variable	variable	none	low	low	not well	variable	low	yes	no

# Overcoming the Bias

• **Consciously** compare your system to the requirements

- Quantitatively assess the cost of fighting the current system and quantitatively assess the cost of developing a new system
- Remove subjectivity from the comparison

#### Beware The Goalie Playing Out

#### Beware The Goalie Playing Out

## **Common Reasons**

- I know what I'm doing
- I understand the problem space
- The AI needs to act the same way as before

# Cognitive Bias

- Blind Spot Bias
- Attentional Bias
- Confirmation Bias

## Third person action

### Targeting in a behavior tree

- Added looping to behavior tree
- Interrupted the whole tree to force update
- Only used selector nodes and was very long

## Behavior != Decision

- Only use selector nodes
- Interrupt to get the tree to rerun
- End nodes are decisions; not states (behaviors)
- Tree always succeeds or fails; never in progress
- Overuse of services (UE)

# The Signs of Fire

- Hacks and interrupts
- Data looks the same as before
- Sense of familiarity it shouldn't be
- Performance issues sudden spikes
- Inability to get results

## Overcoming the Bias

- Take a small problem, author the data both in the old way and in the new: it should be different.
- Take a new problem, author the data with the new system – try to think in its terms
- Consult an expert in the new system. Have them review your data.

#### **Too Many Heroes**

![](_page_30_Picture_2.jpeg)

![](_page_31_Picture_0.jpeg)

### **Common Reasons**

- This is an AI feature
- This is how we do it in Animation
- Production assigned this task to me
- I don't know anything about the Animation system

![](_page_31_Picture_6.jpeg)

![](_page_32_Picture_0.jpeg)

# Cognitive Bias

- System justification
- Pro-Innovation Bias

![](_page_32_Picture_4.jpeg)

 Law of the Instrument – "I have a hammer, that must be a nail"

![](_page_33_Picture_0.jpeg)

#### Narrative game

![](_page_33_Figure_2.jpeg)

![](_page_34_Picture_0.jpeg)

#### Without a map...

![](_page_34_Picture_2.jpeg)

![](_page_34_Picture_3.jpeg)

![](_page_35_Picture_0.jpeg)

# The Signs of Fire

- Duplicated structure, enums, functionality
- Indirect breaking of data encapsulation
- Modules need to stay "in synch"
- AI programmer(s) that don't know the animation system and vice versa

![](_page_36_Picture_0.jpeg)

## Overcoming the Bias

- Multiple discipline scrums
- Learn how the other systems work: AI, audio, input
- Consider making the AI classification of the world state shared / common
- Have an architectural diagram: UML 4 the WIN

![](_page_37_Picture_0.jpeg)

## **Overcoming the Recency Bias**

- Don't silo yourself or your code: Too Many Heroes. Know your architecture.
- Rewire your brain and don't fight your AI: Beware The Goalie Playing Out
- Choose your AI system based on requirements: Because It's There

![](_page_38_Picture_0.jpeg)

![](_page_38_Picture_1.jpeg)

#### ARTIFICIAL INTELLIGENCE

# Know the signs

- Hacks & a lot of interrupts
- Bypassing advantage of the system
- Constant tuning
- It's a new system and the data looks laid out incorrectly
- Performance issues sudden spikes
- Inability to get results
- Duplicated structure, enums, functionality
- Modules need to stay "in synch"
- AI programmer(s) that don't know the animation system and vice versa
