Technical Support

Development - Overview

Technical Support

- Email or forums

- Outline what you've tried already and the outcomes
- Imagine any question that could come up

Development - Unity

Development Overview

- Slow iteration cycle
- Existing Cert coverage vs. manual implementation
- Metadata configuration

Development - Unity

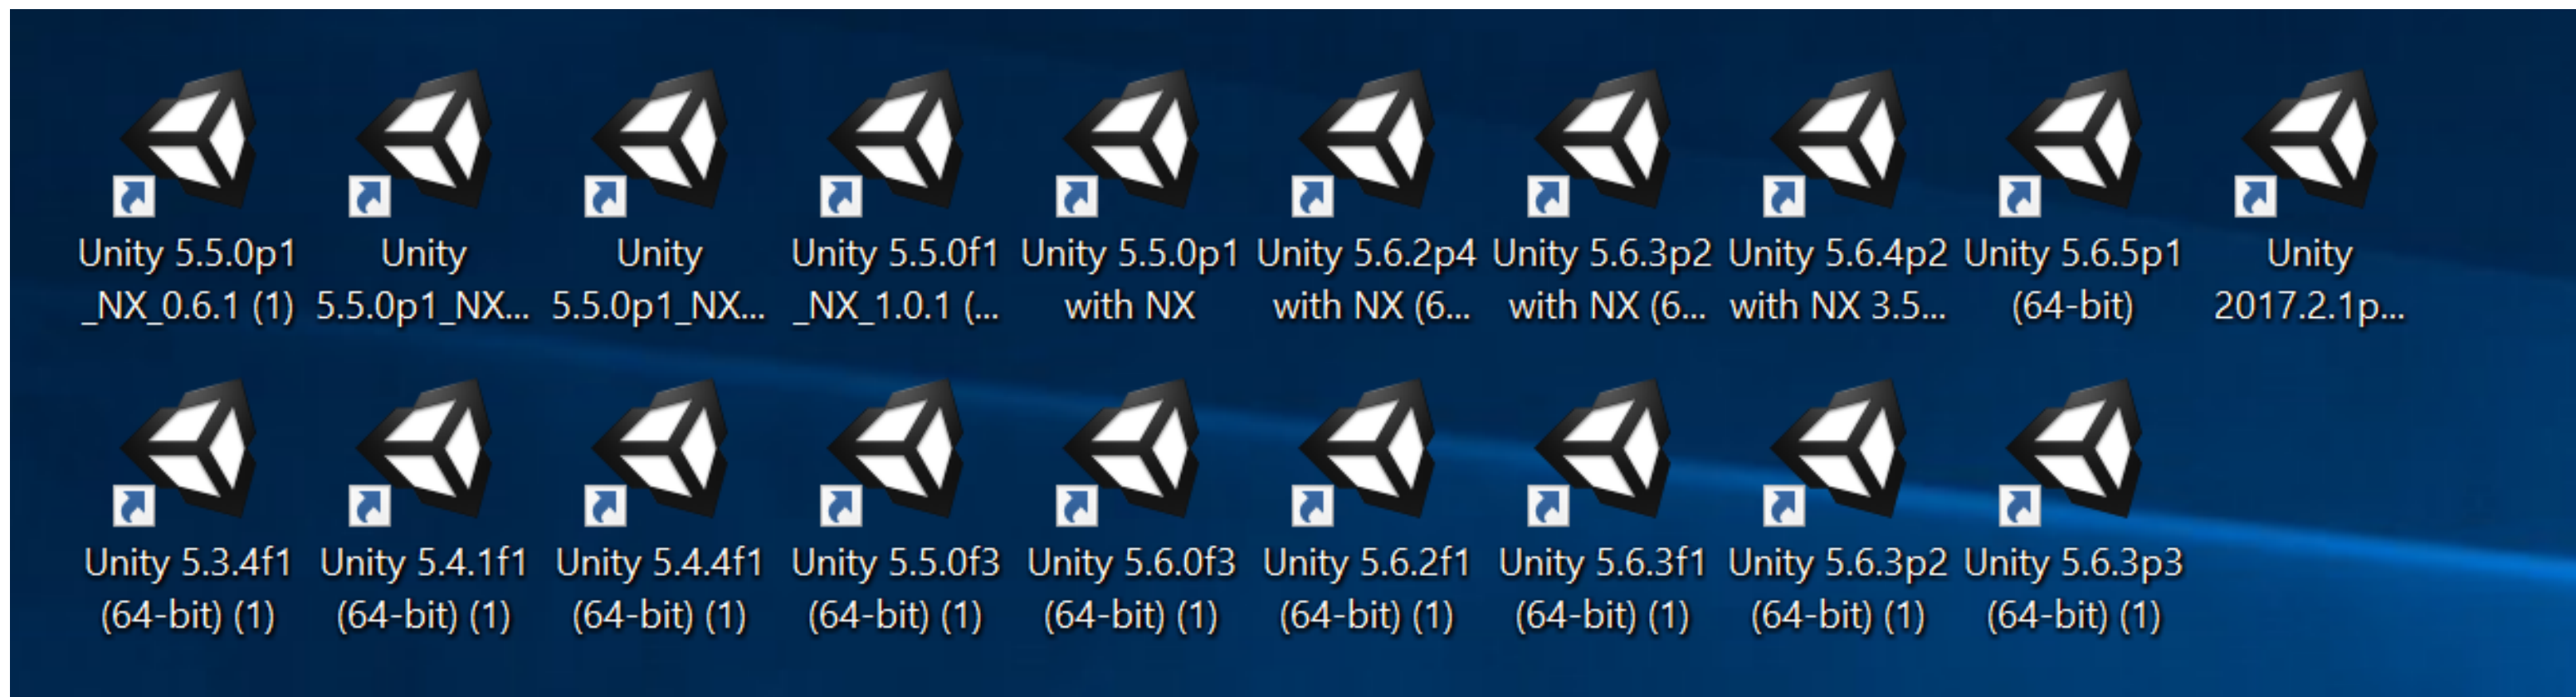

Version management

- Unity versions tied to SDK versions
- Issues with parity
- Upgrade/downgrade issues
- Manage multiple Unity installations

Development - Unity

Development - Unity

Asset Bundles

- Included with the game (not served online)
- Reduces read/write calls to file system
- Deterministic
- Reduces build time
- Reduces final rom size
- Highly recommended for file-based binary diff patches

Development - Unity

Player Prefs

- Common for indies on PC. Easy saving/loading of game data
- Not supported on all platforms
- Prefer a solution with a clear separation between:
 - Game data serialization (to string or memory buffer)
 - File system read/write operations

Development - Unity

Development - Unity

Debugging Strategies

- Script debugging while running in the Editor on PC
- Debug.Log statements *everywhere*
- Debugging the IL2CPP generated project
- UI debugging features

Development - Unity

Performance Optimizations

- Find lower Quality levels you're still happy with
- Common CPU performance issues

Development - Unity

Third Party Plugins

- Can make platform abstraction easier
- Can make Unity version management more difficult
- Bugs can popup on specific platforms and/or specific Unity versions
- Do they already support the platform? How good is their support?

Submission & Certification
