

# Rocket League: Scaling for Free to Play

Matthew Sanders  
Lead Online Services Engineer / Psyonix

# The Team & The Problem

- What does the Online Services team do?
- What is Free to Play (F2P) for Rocket League?
  - \$20 → \$0
  - Lower barrier to entry

***FREE TO PLAY  
SUMMER 2020***

# The Journey

- Part 1: Planning and Preparation
  - Partnerships
  - Analysis
  - Load testing
- Part 2: Scaling Improvements
- Part 3: Launch Learnings
  - F2P launch experience
  - The new normal

# Part 1: Planning and Preparation

“We have top men working on it right now.”  
-Major Eaton

# Planning and Preparation - Overview

- Analysis
  - Load projections
  - Architecture evaluation
- Partnerships
  - Support contracts
  - Outside advice
- Leveling up load testing

# Analysis - Load projections

- How many new players will come?
  - It's not divination
  - Find a comparable game release
- Let's go with "3x to 5x"
- 5x became our load testing target

# Analysis - Architecture Evaluation

- How does each component work?
  - Is the design scalable?
  - Backlog any identified risks
- Create a template
- Check your work
  - Peer review
  - Source control audit

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Partnerships - Support Contracts

- Expert specialists
  - Cost comparison: Support versus Downtime?
- Google
  - Google Cloud Platform (GCP)
  - Customer Reliability Engineering (CRE)
  - Game Title Launch Assist (GTLA)

redislabs  
HOME OF REDIS

# Partnerships - Outside Advice

- Google's CRE and GTLA
  - Premortem exercise
  - Resource planning and quotas
- Redis Labs
  - Extensive technical Q&A
  - Migration support

# Load Testing

- Most important
- Most underestimated
  - Unique
  - Expensive
  - Hard to get right
    - Request patterns
    - Request volumes

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Load Testing - Leveling Up!

- Our framework of choice:
  - Web sockets
  - Kubernetes
  - 1 locust = 1 client
- Developing a new codebase
  - Locust coordination
  - Bad inputs = bad simulation

"Python... Very dangerous.  
You go first!"  
-Sallah

# Load Testing - Leveling Up!

- Time consuming, especially at full scale
  - Linear scale up time
  - Run time
  - Iteration count

# Load Testing - Gathering Results

- Data to gather:
  - HTTP response codes
  - Service logs
  - Resource usage
- Is it accurate?
- Led to dozens of sequential fixes

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Load Testing - In Perpetuity

- Keep testing until the release
  - It is better to know, even if last minute
  - Mitigate instead!
- SDLC integration

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Part 2: Scaling Improvements

“I had bugs for lunch.”  
-Willie Scott

# Scaling Improvements - Overview

- Core Services to Kubernetes
- Matchmaking overhaul
- Redis Enterprise migration
- MySQL improvements
- Rate Limiting
- Development Postmortem

# Core Services to Kubernetes

- Live migration from Google AppEngine (GAE) to Google Kubernetes Engine (GKE)
  - Control over the runtime and scaling
  - Consistency and cloud-agnostic
- Separate GCP projects
  - Clarity, simplicity, security
- Load testing: indispensable!

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Matchmaking Overhaul

- Known performance problems
- Our Matchmaking service:
  - Single-threaded .NET application
  - Already “maxed out”
  - Mostly spaghetti by volume

# Matchmaking Overhaul

- MapReduce seems like a good fit
- We found OpenMatch:
  - Designed for scaling
  - Orchestrated set of containers
  - Cutting edge (pre-1.0)
- Load testing... again
  - Tune it in GKE
  - Learn the dynamics

open match

# Redis Enterprise Migration

- Fully automated re-sharding
  - We absolutely used this!
  - Beware its performance cost

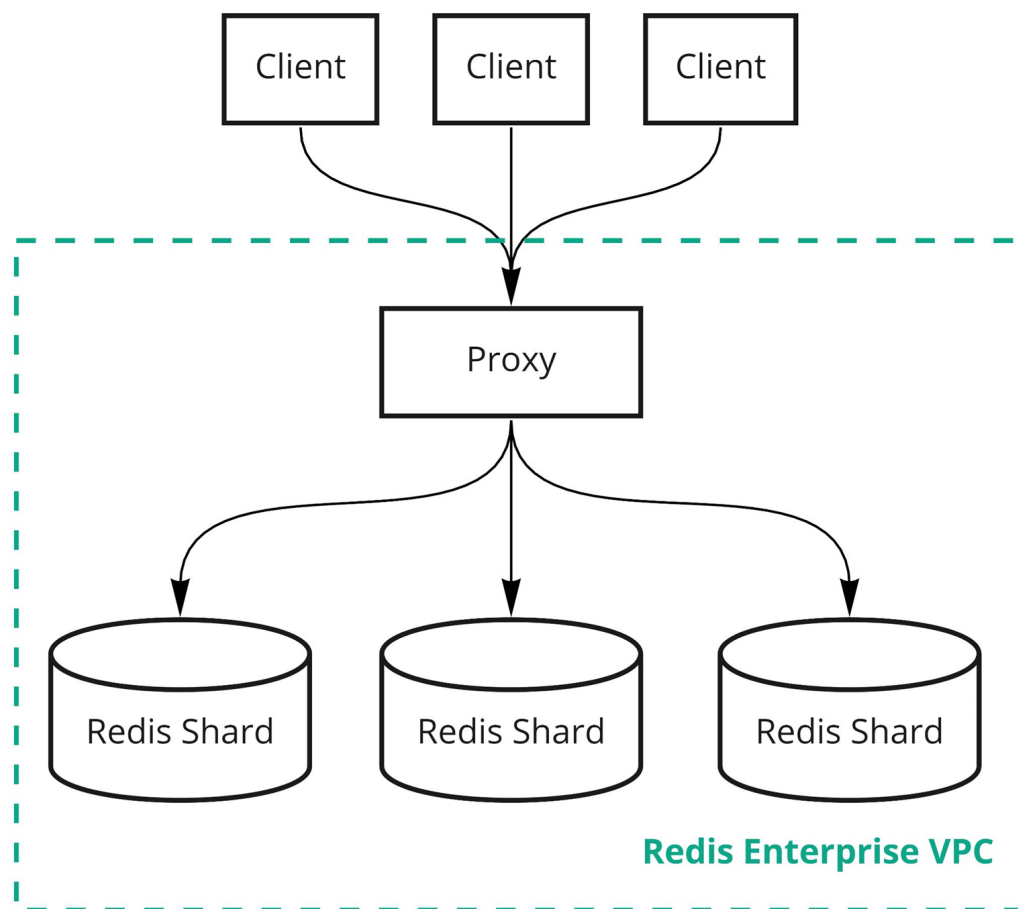

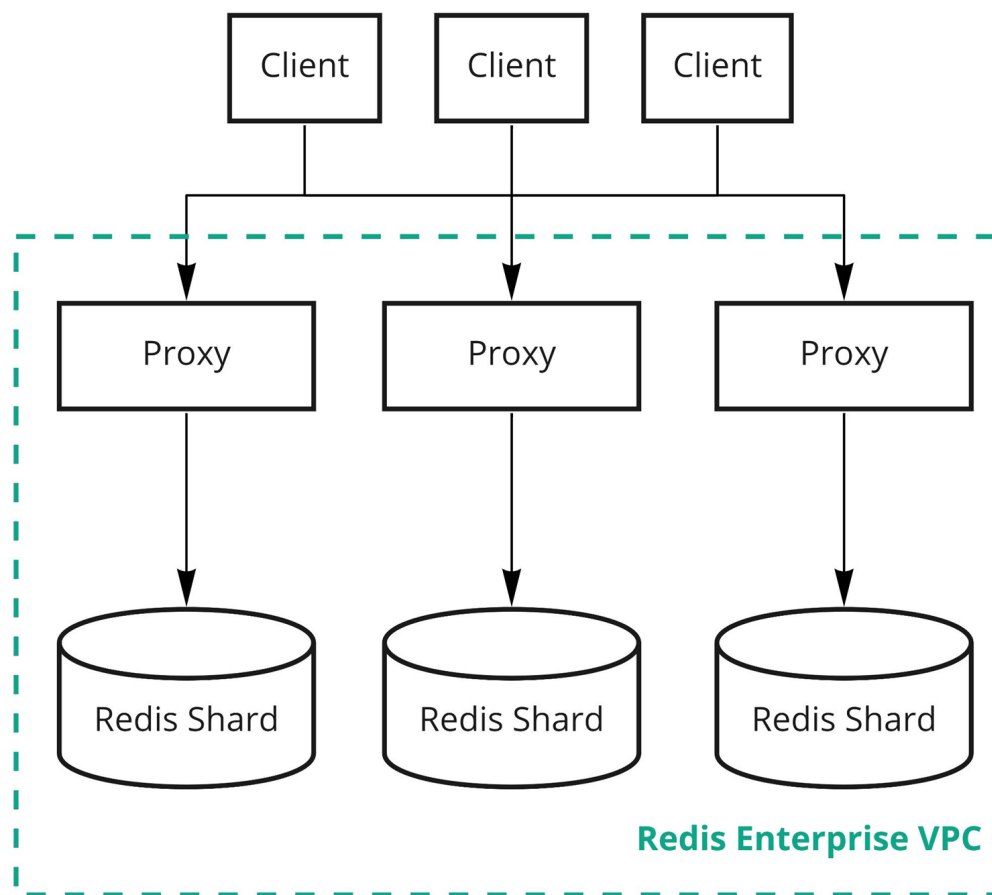

# Redis Enterprise Migration

- Proxy configurations:

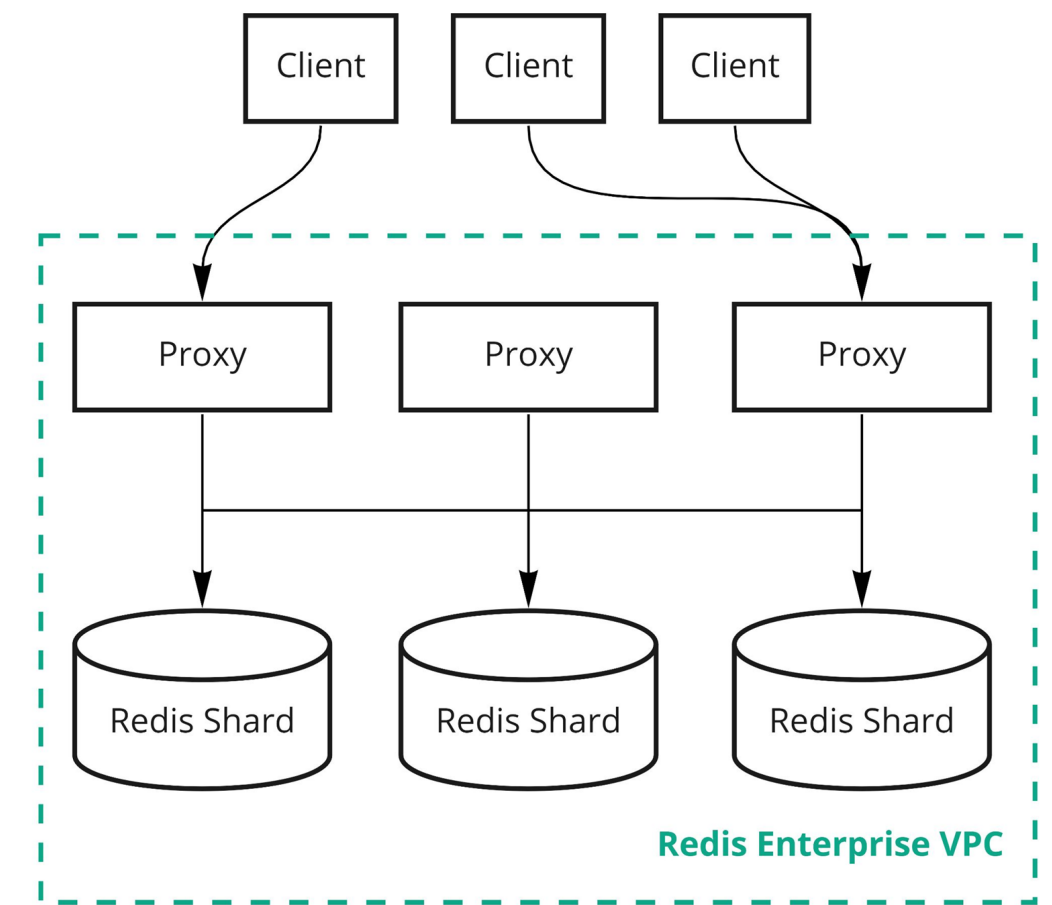

**Single Proxy**

**OSS Cluster Mode**

**DNS Load Balancer**

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Redis Enterprise Migration

- Adjustments
  - Observability of commands
  - Monitoring and dashboards
- Other improvements
  - Pub/Sub optimizations
  - Temporary replicas
  - No vendor lock-in

# MySQL Improvements

- Vertical scaling only, with replicas
- “Feature shards”
  - Sets of tables on different servers
  - Effort: Easy, usually
  - Does not solve vertical scaling problem
- Insufficient time to migrate horizontal scaling
  -  itess was attractive, but not exactly drop-in
  - However, we reached our load test targets!

# MySQL Improvements

- ProxySQL
  - Scale out as many as we need
  - Offloads connection churn
  - Instant failovers
- Pros
  - Speaks MySQL
  - Dynamic query routing
- Cons
  - Some bugs
  - Learning curve

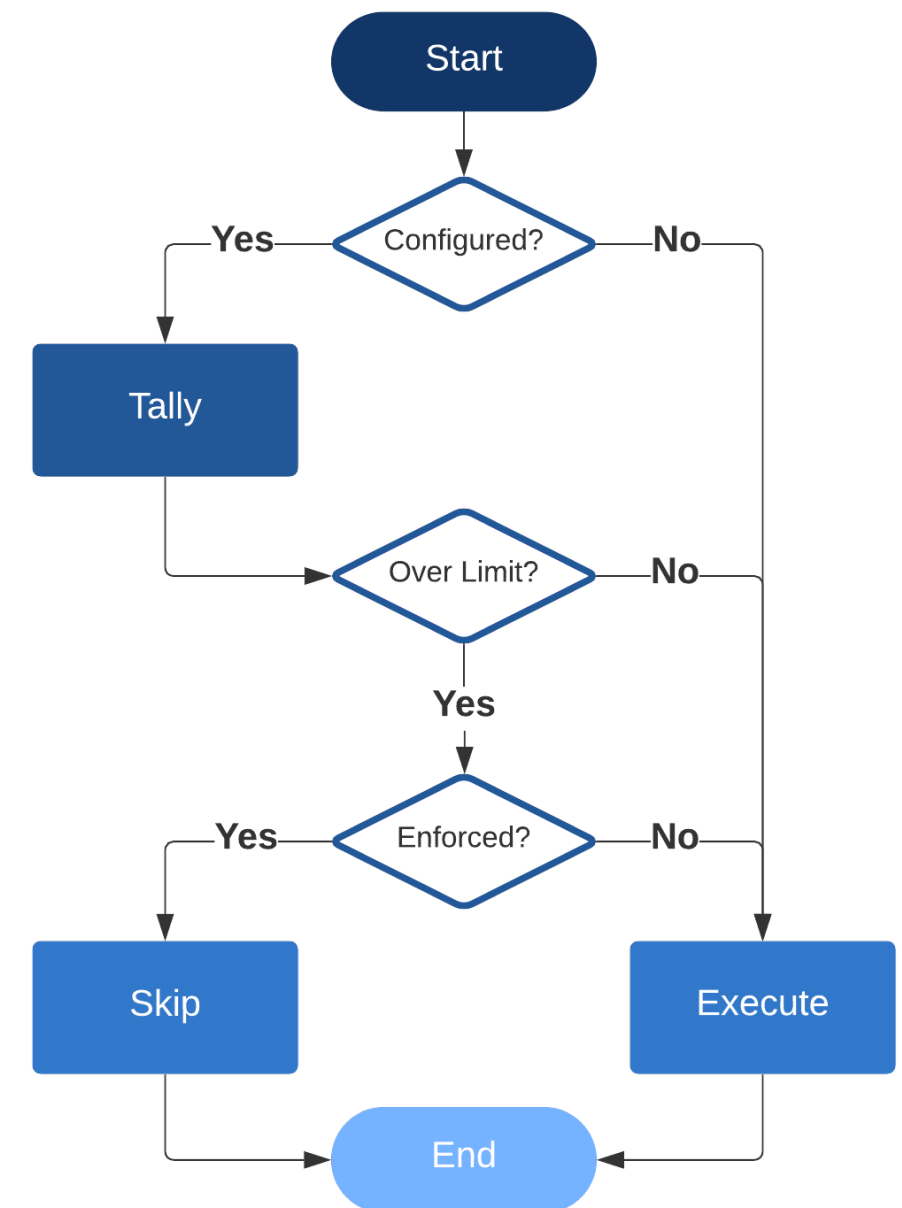

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Rate Limiting

- Started life as a Login Queue
- Rate limit session creation instead
- Custom implementation
  - Simple logic
  - Integrates with our infrastructure
- More versatile in the end
  - Limit any set of services
  - Global or per-player limits

# Development Postmortem

- Where did the months go?
- Work-from-home transition
- High effort for major features!
- Don't over-analyze
- Intermediate deadlines
  - Define
  - Respect
  - Coordinate

# Part 3: Launch Learnings

“Let my armies be the ***engineers***, and the ***code***,  
and the ***services in the cloud...***”  
-Charlemagne

# Launch Schedule

## September 2020

SUN	MON	TUE	WED	THU	FRI	SAT
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16 Game Update	17	18	19
20	21	22 Hotfix	23 F2P Launch	24	25	26
27	28	29	30			

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Launch Boost!

- Look at that population!
- Sunday peak was over projected 5x increase but lower than our highest successful load test
- Wednesday launch was ideal

GDC<sup>®</sup>

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

# Launch Outages and Issues

1. Wednesday: Epic Accounts sign-in
2. Thursday: Redis Enterprise re-sharding
3. Friday: ProxySQL misconfiguration
4. No outages over the weekend!

# Launch Feelings

- Tension and confidence
- New all-time peak every day
  - Accurate 5x projection!
- Zoom war room
  - Kept busy fixing smaller issues

# The New Normal

- The population increase is still 3x
- Higher population makes services sensitive
  - Code AND configuration
  - Continue load testing!
- Renew best practices
  - Design of live migrations
  - Pushing out changes
  - Always have a rollback plan

# Takeaways

“An army which carries the ***Load Tests*** before it...  
is invincible.”  
-Marcus Brody

# Takeaways

- Stay organized early on
  - Do seek support and advice
  - Don't over-plan
- Load testing is hard and super important
- Coordinate big features
  - Stick to intermediate deadlines
- Implement versatile controls like rate limiting

The GDC logo is positioned at the top center of the slide. It consists of the letters 'GDC' in a bold, white, sans-serif font. The background of the slide is a dark blue space-themed illustration featuring various celestial bodies, including a large purple planet with a blue ring system on the left, a pink and purple ringed planet on the right, and several smaller brown planets with rings. Thin white lines representing orbits or constellations are scattered across the dark background.

GDC

Thank you for attending!
