

# LIVING IN PROCEDURAL WORLDS: CREATURE MOVEMENT AND SPAWNING IN NIGHTINGALE

GDC

PRESENTATION BY: ARTA SEIFY & NATHAN STURTEVANT

# INFLEXION GAMES

March 20-24, 2023 | San Francisco, CA #GDC23

GDC

# OVERVIEW

- Introduce Nightingale
- Navigation technology
  - Abstract Graph
- Making the realms feel alive
  - Using K-means clustering

# TAKEAWAYS

- Adding an Abstract graph on top of Recast enables:
  - Longer distance pathfinding with terrain preferences
  - More efficient custom queries
    - Find closest unit
    - Connectivity Graph (Connected Components)
- Use K-means clustering to evenly distribute creature population in 3D space

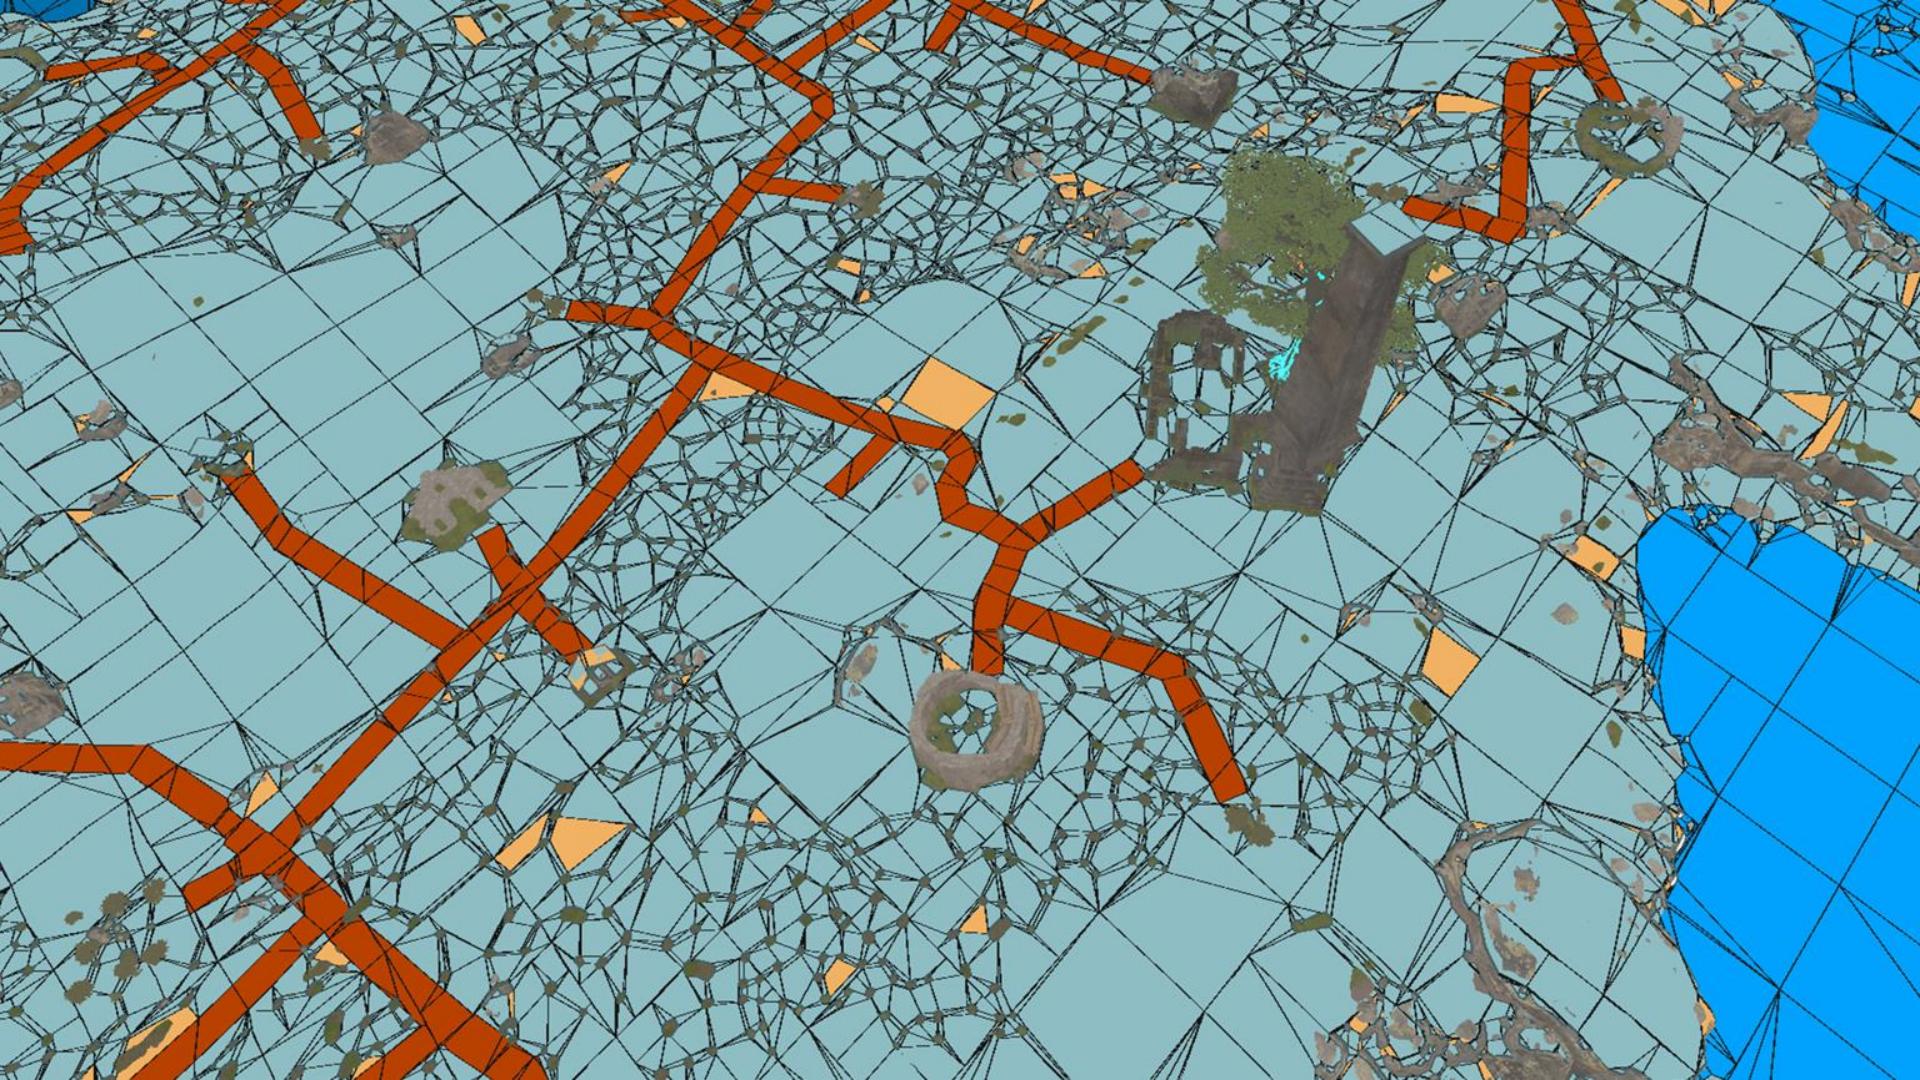

# **NAVIGATION SYSTEM**

An efficient navigation technology will enable fun gameplay opportunities

# NIGHTINGALE NAVIGATION OVERVIEW

- Unreal's Recast
  - Supports all of our requirements
  - Not efficient for many of our use cases
- Custom Tech: Abstract Graph
  - Built directly on top of Recast
  - Supports various gameplay needs
- Some of the work published in AIIDE 2019 conference:  
“Pathfinding and Abstraction With Dynamic Terrain Costs”
  - Authored by Nathan Sturtevant in collaboration with the Inflexion team

# BENEFIT: TERRAIN PREFERENCES

# BENEFIT: CUSTOM PATH QUERIES

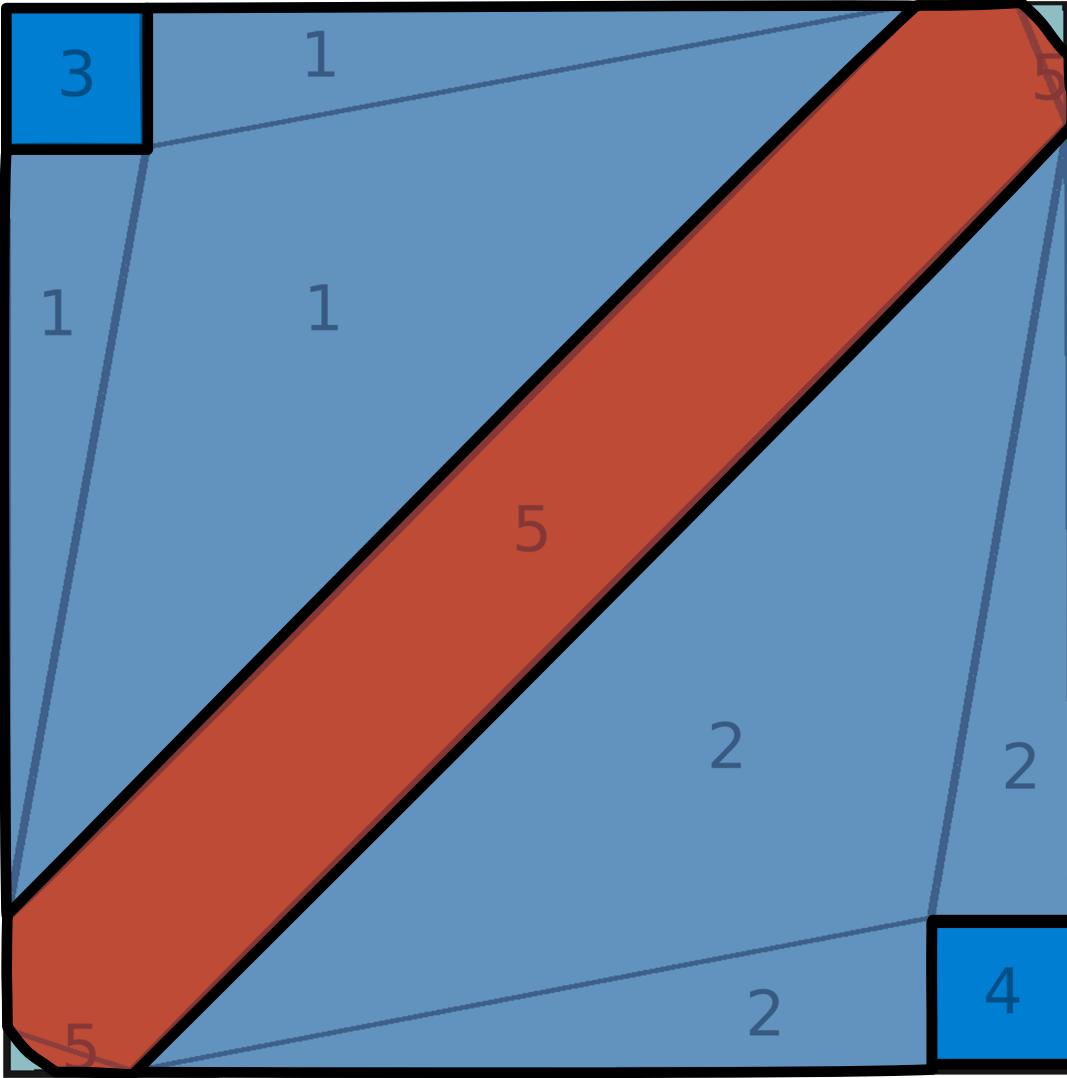

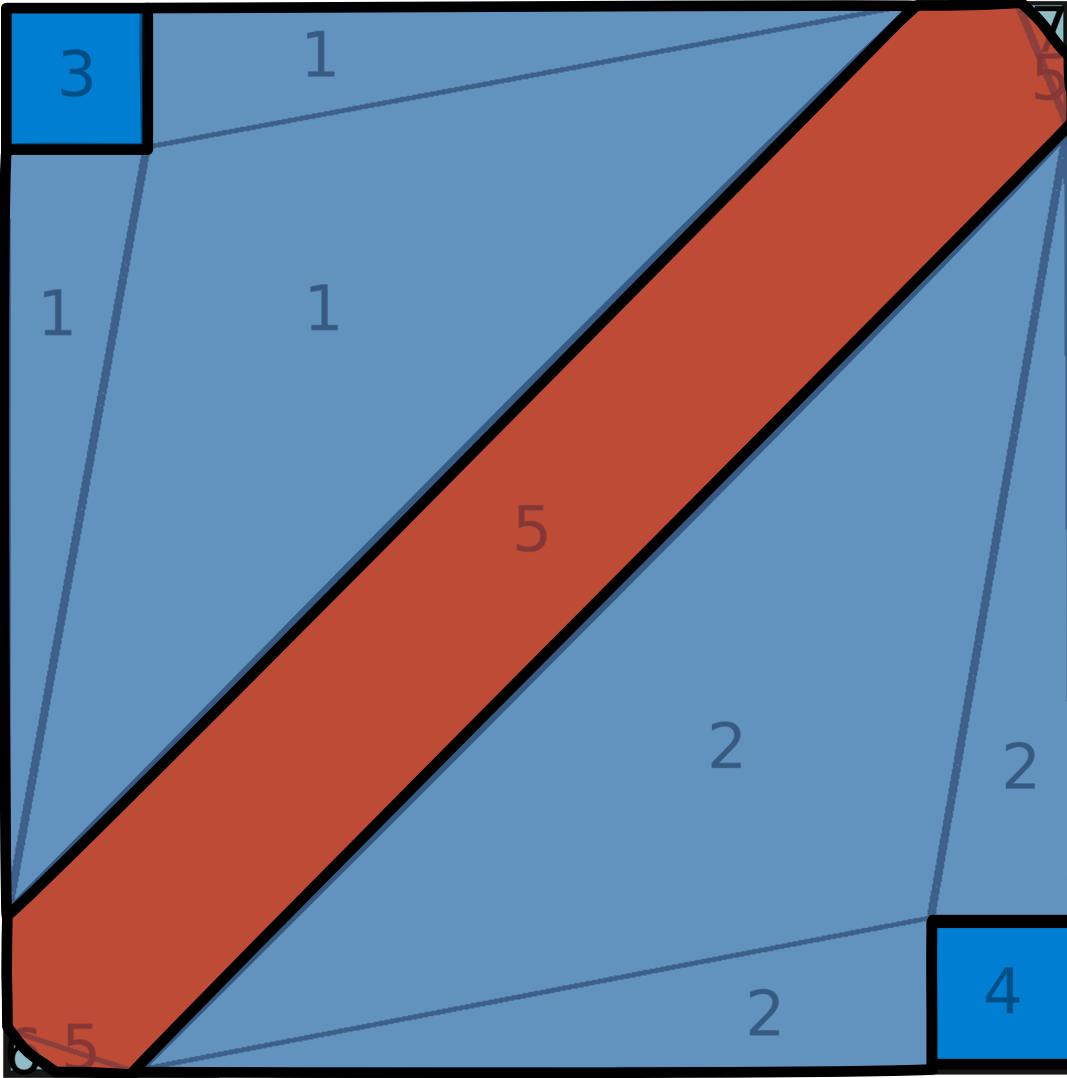

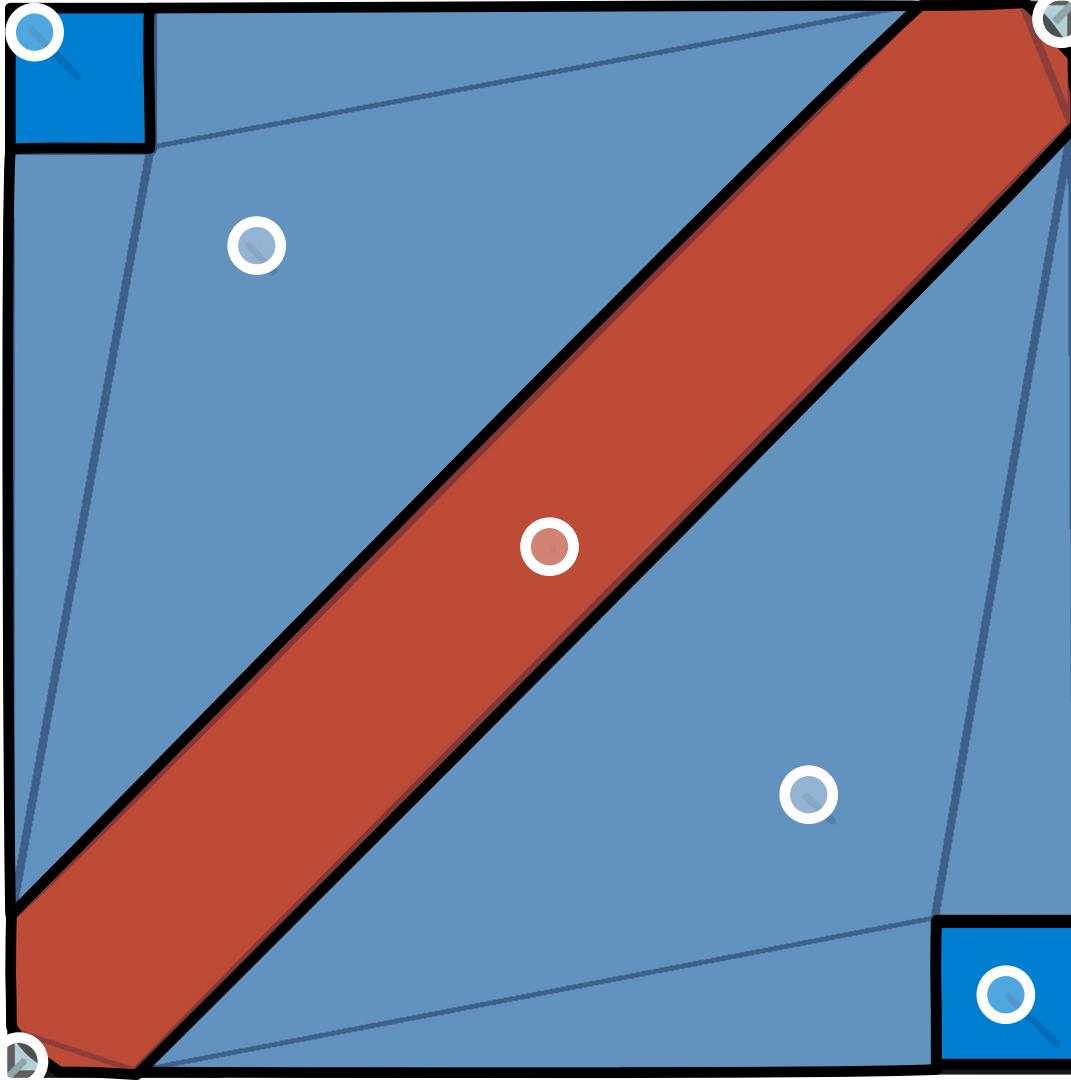

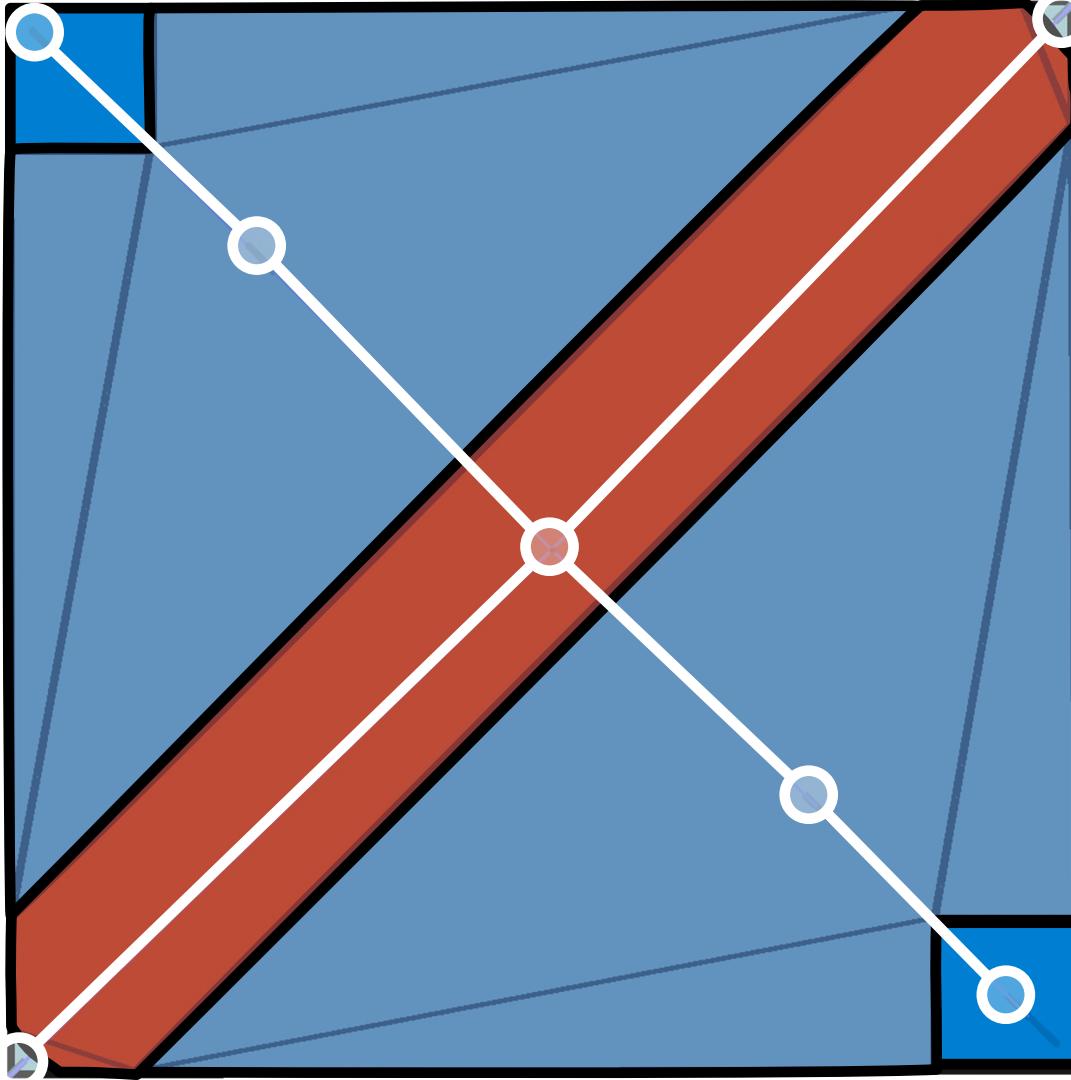

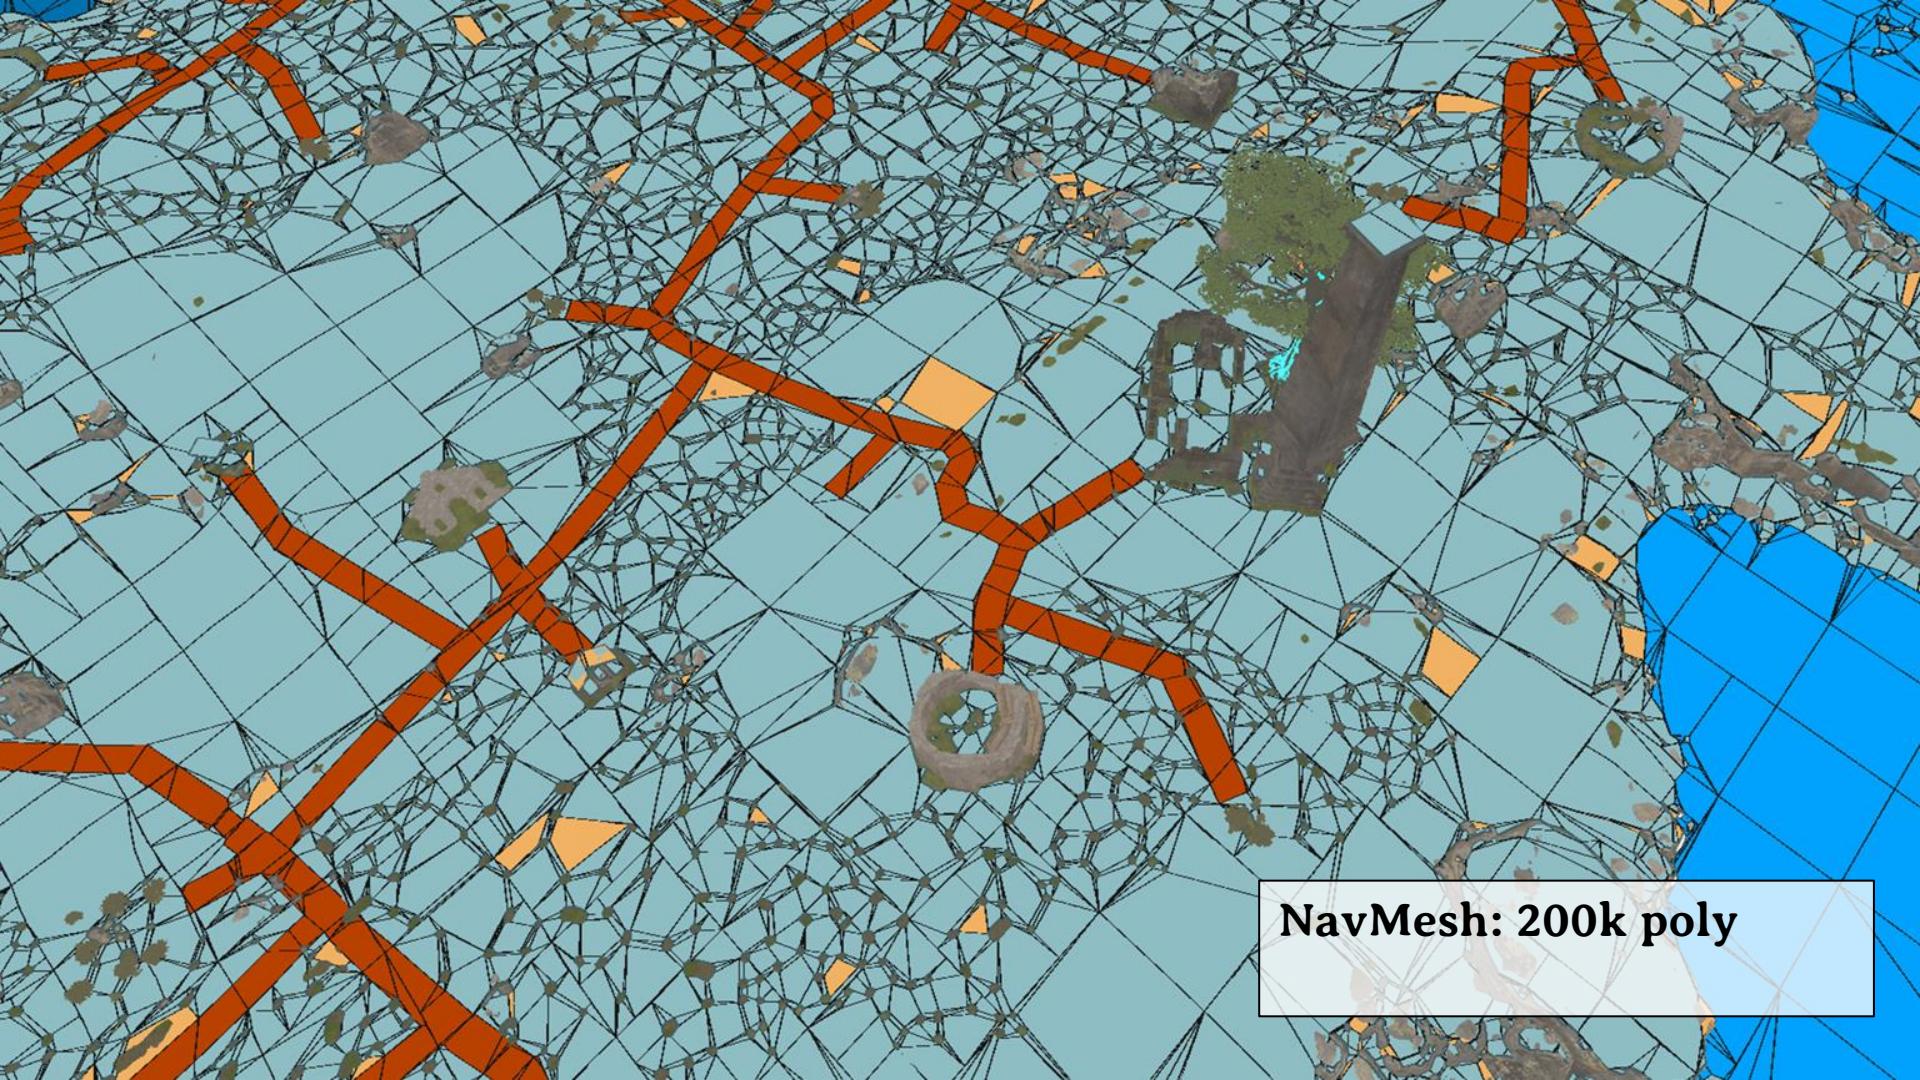

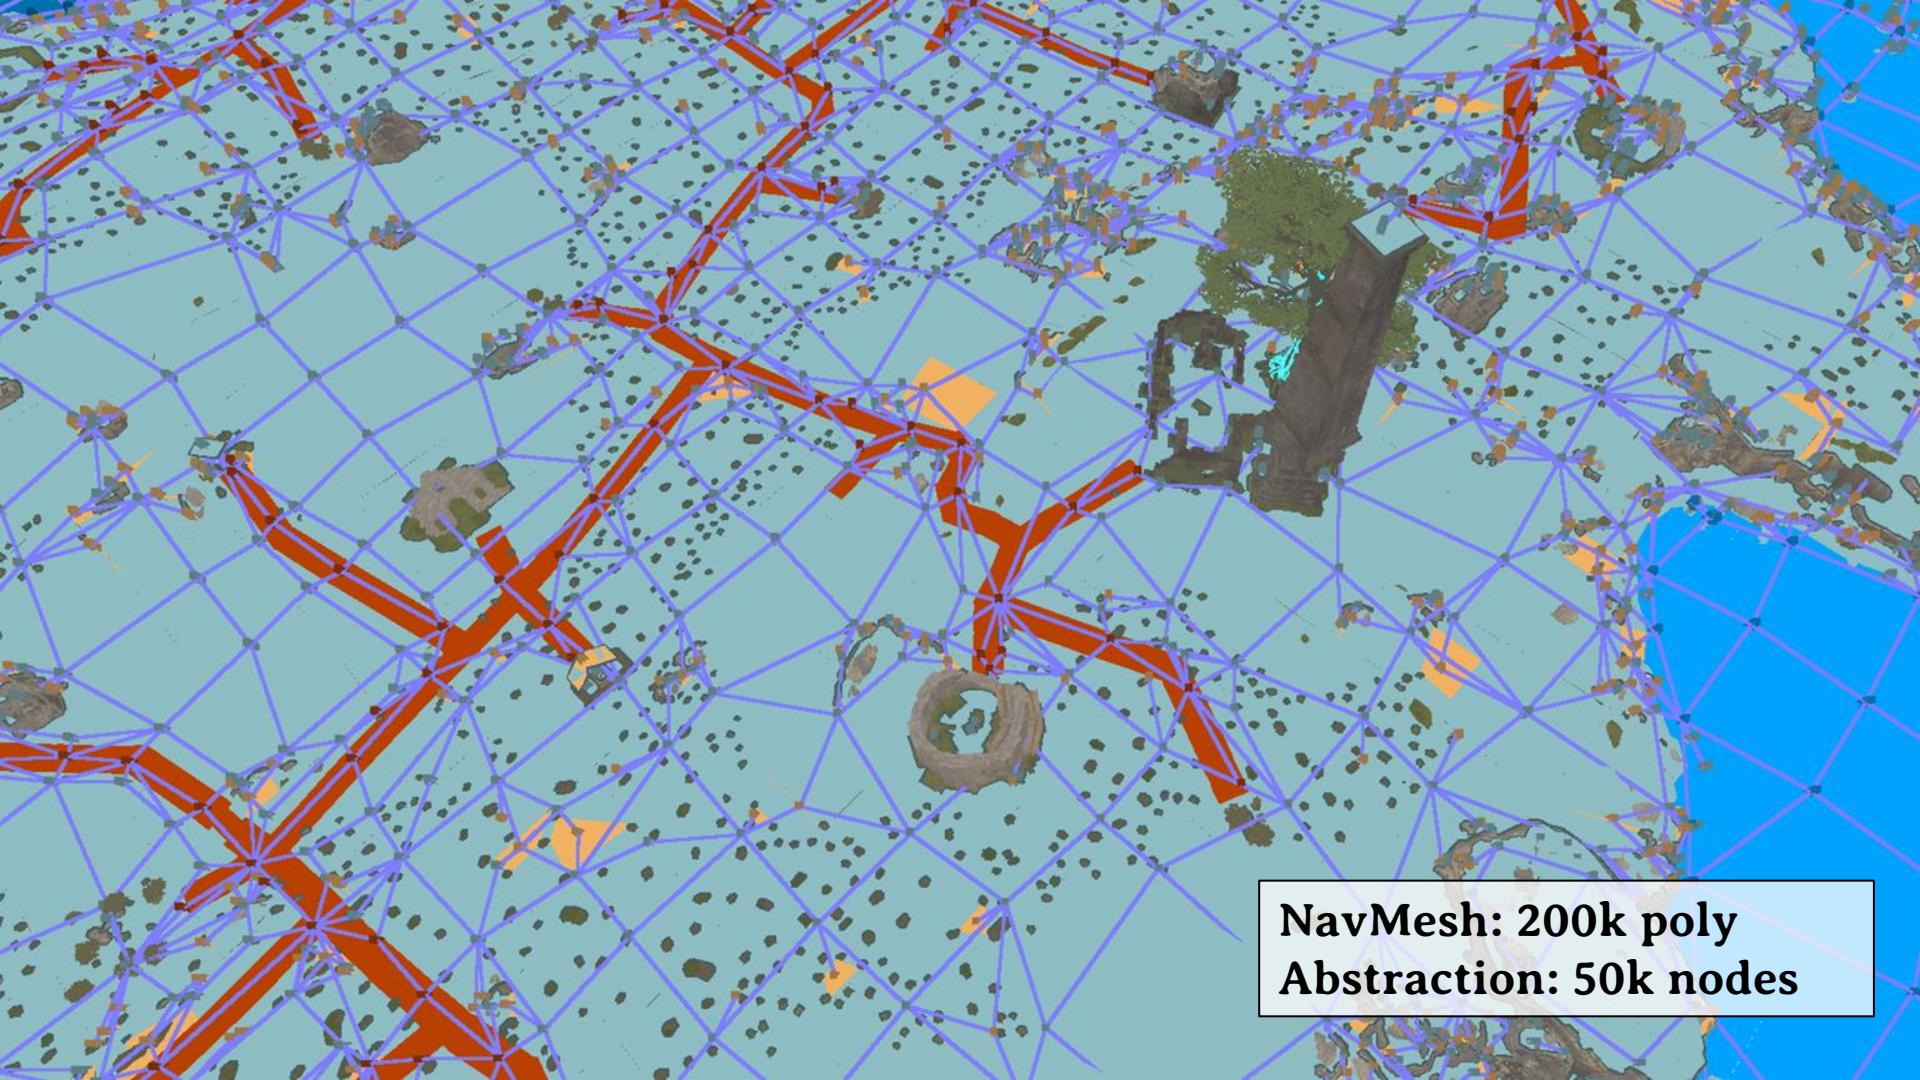

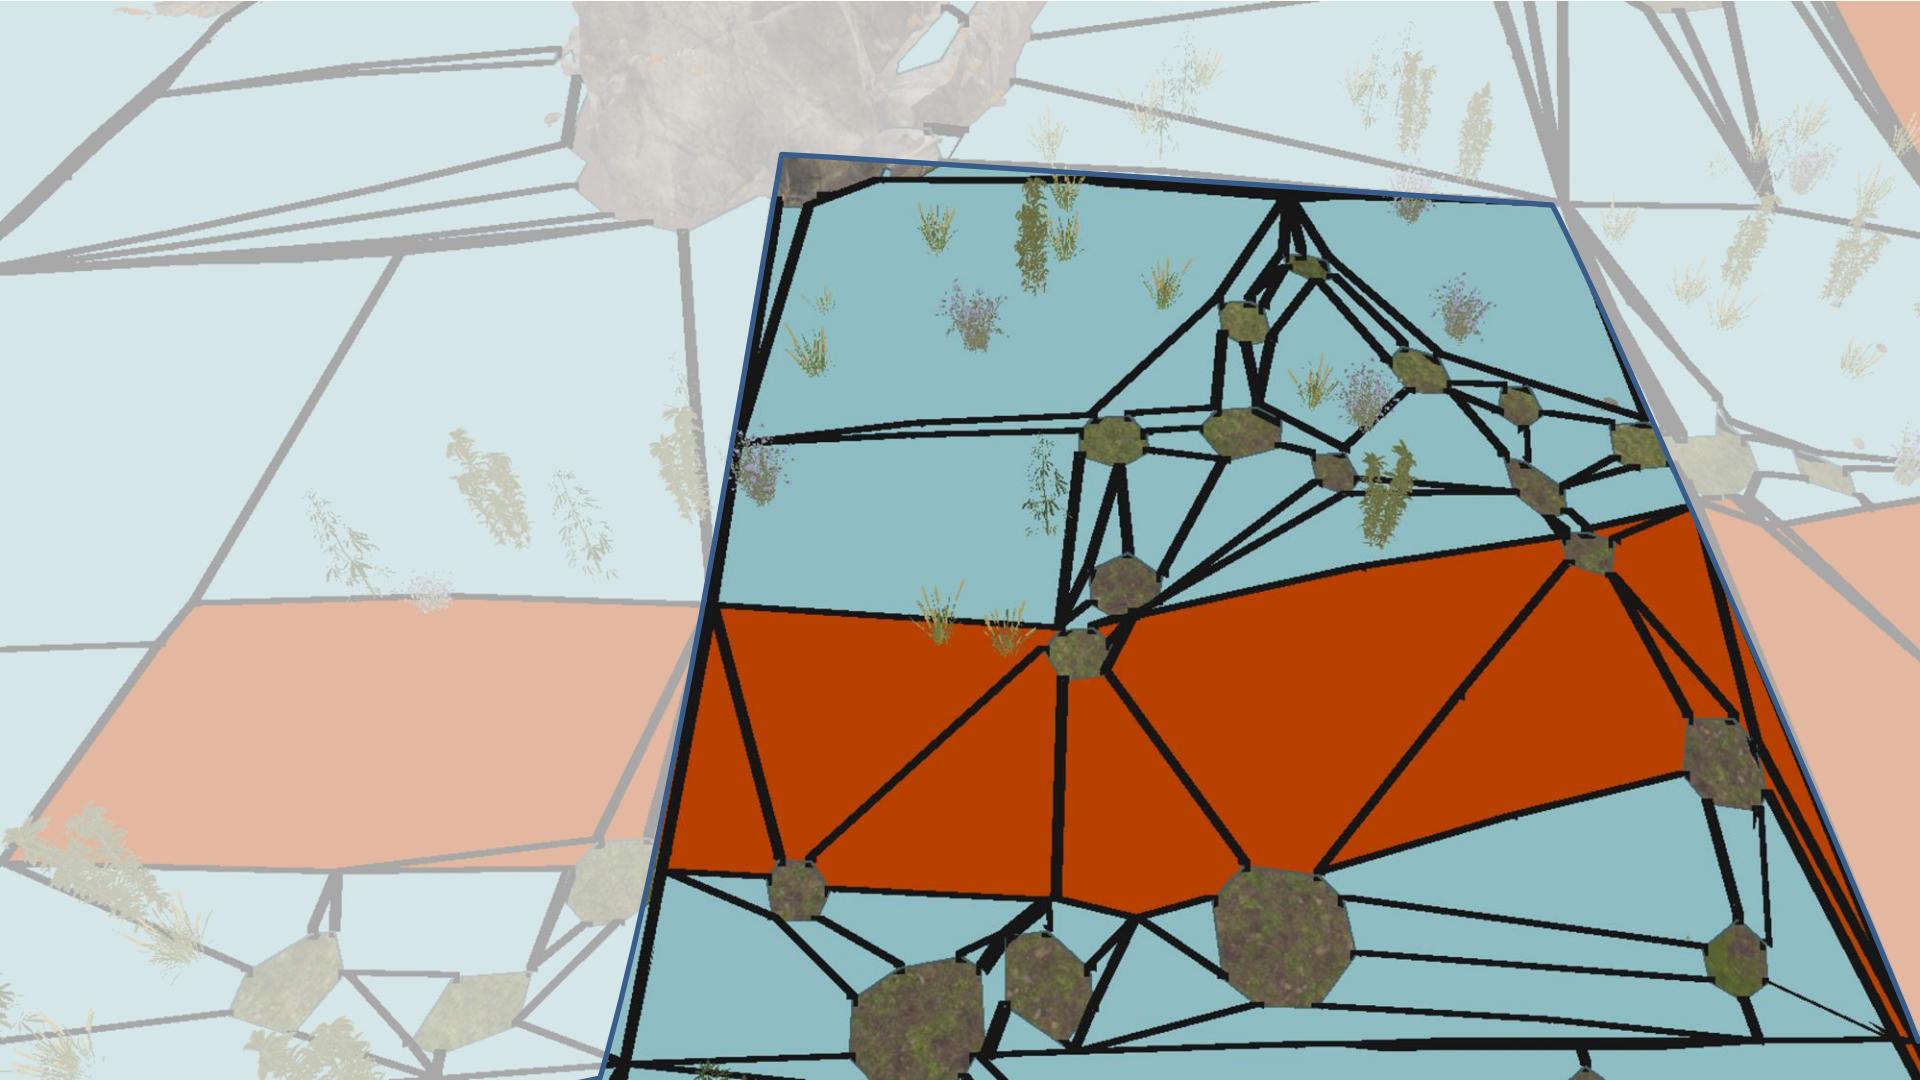

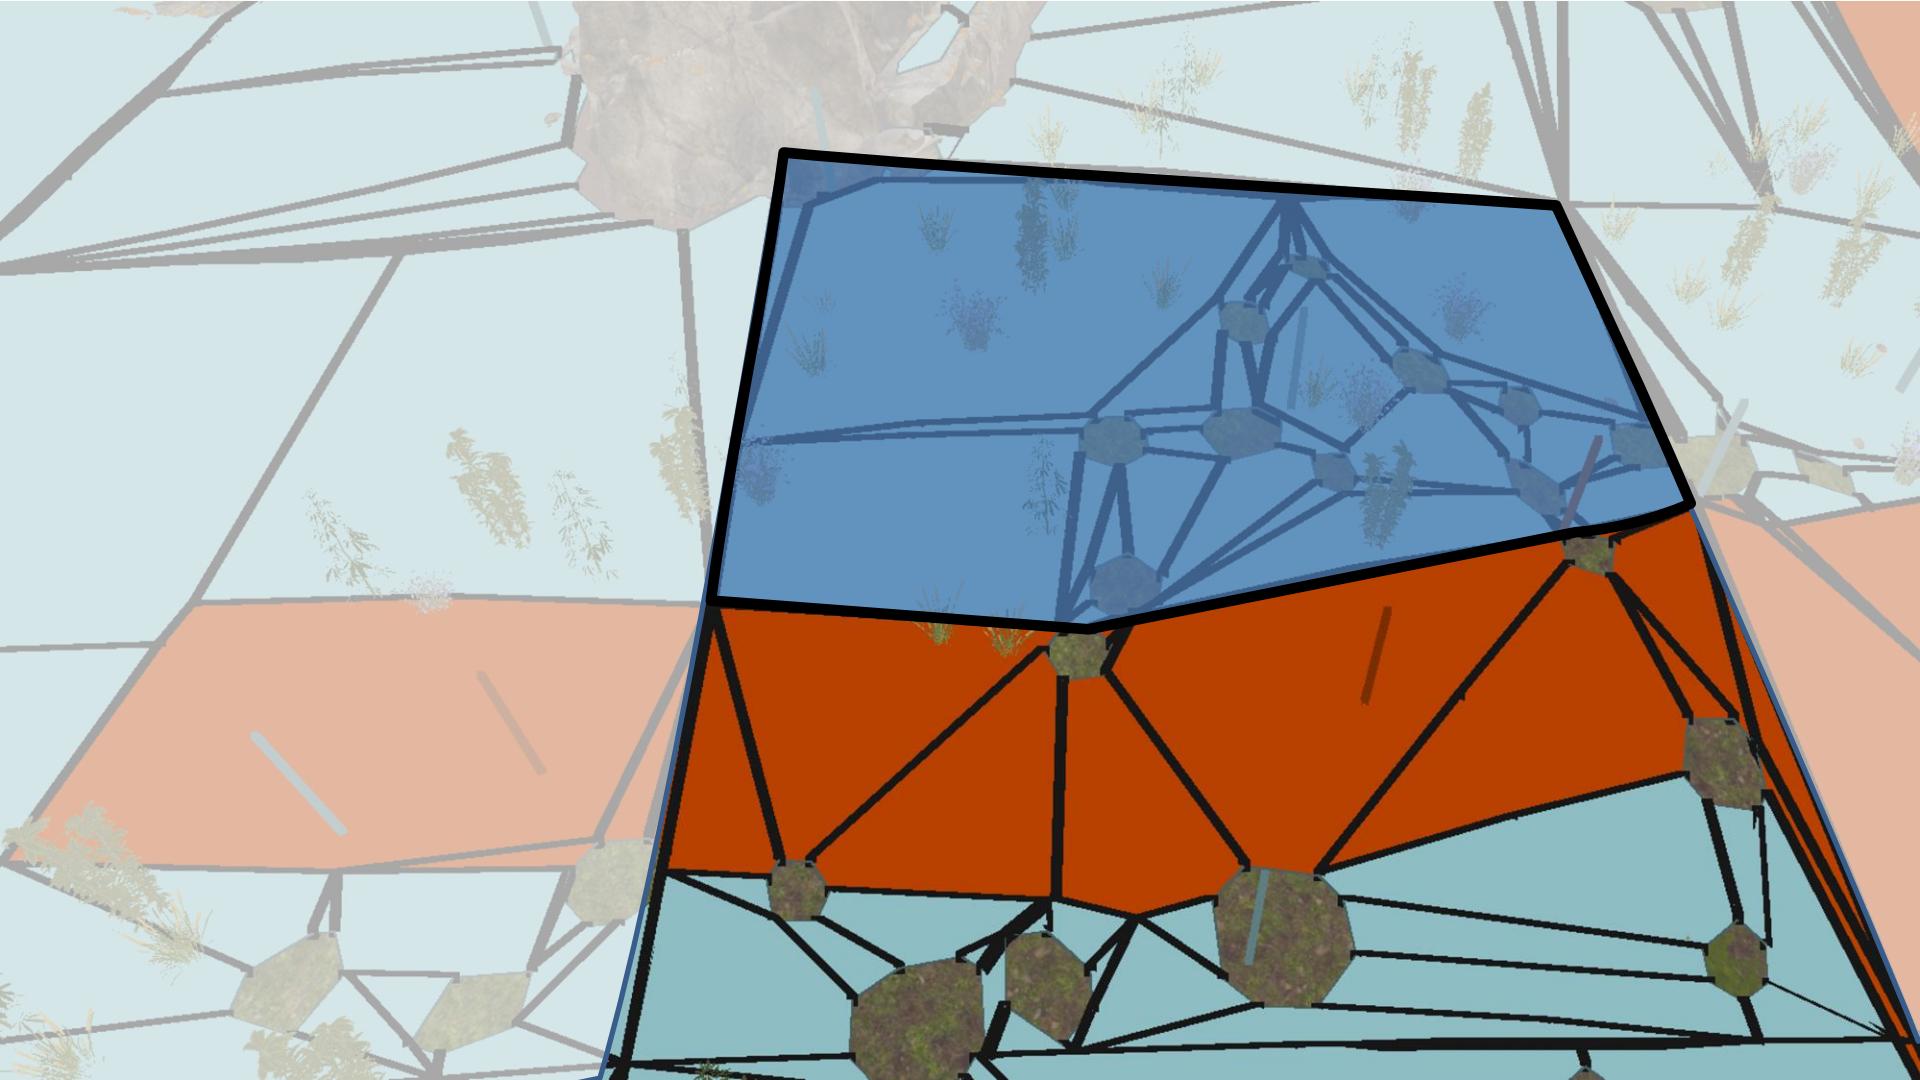

**NavMesh: 200k poly**

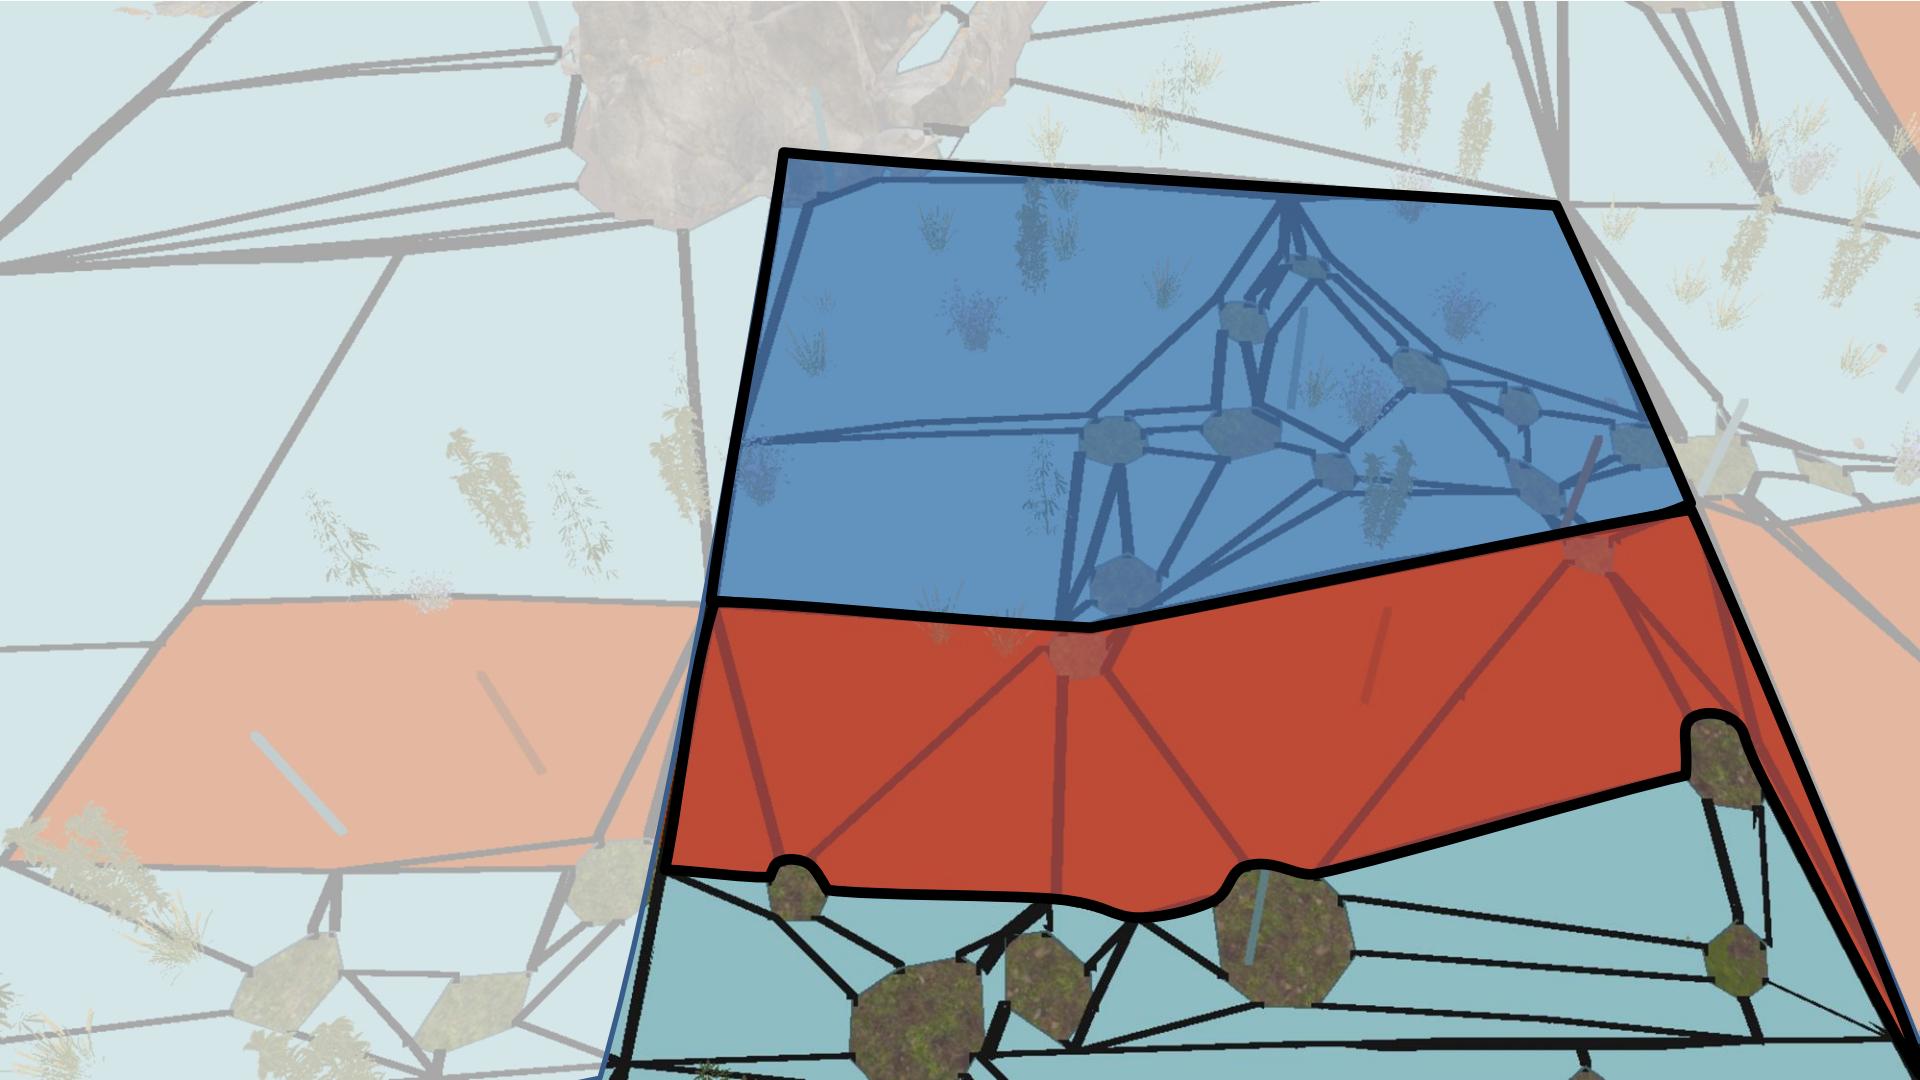

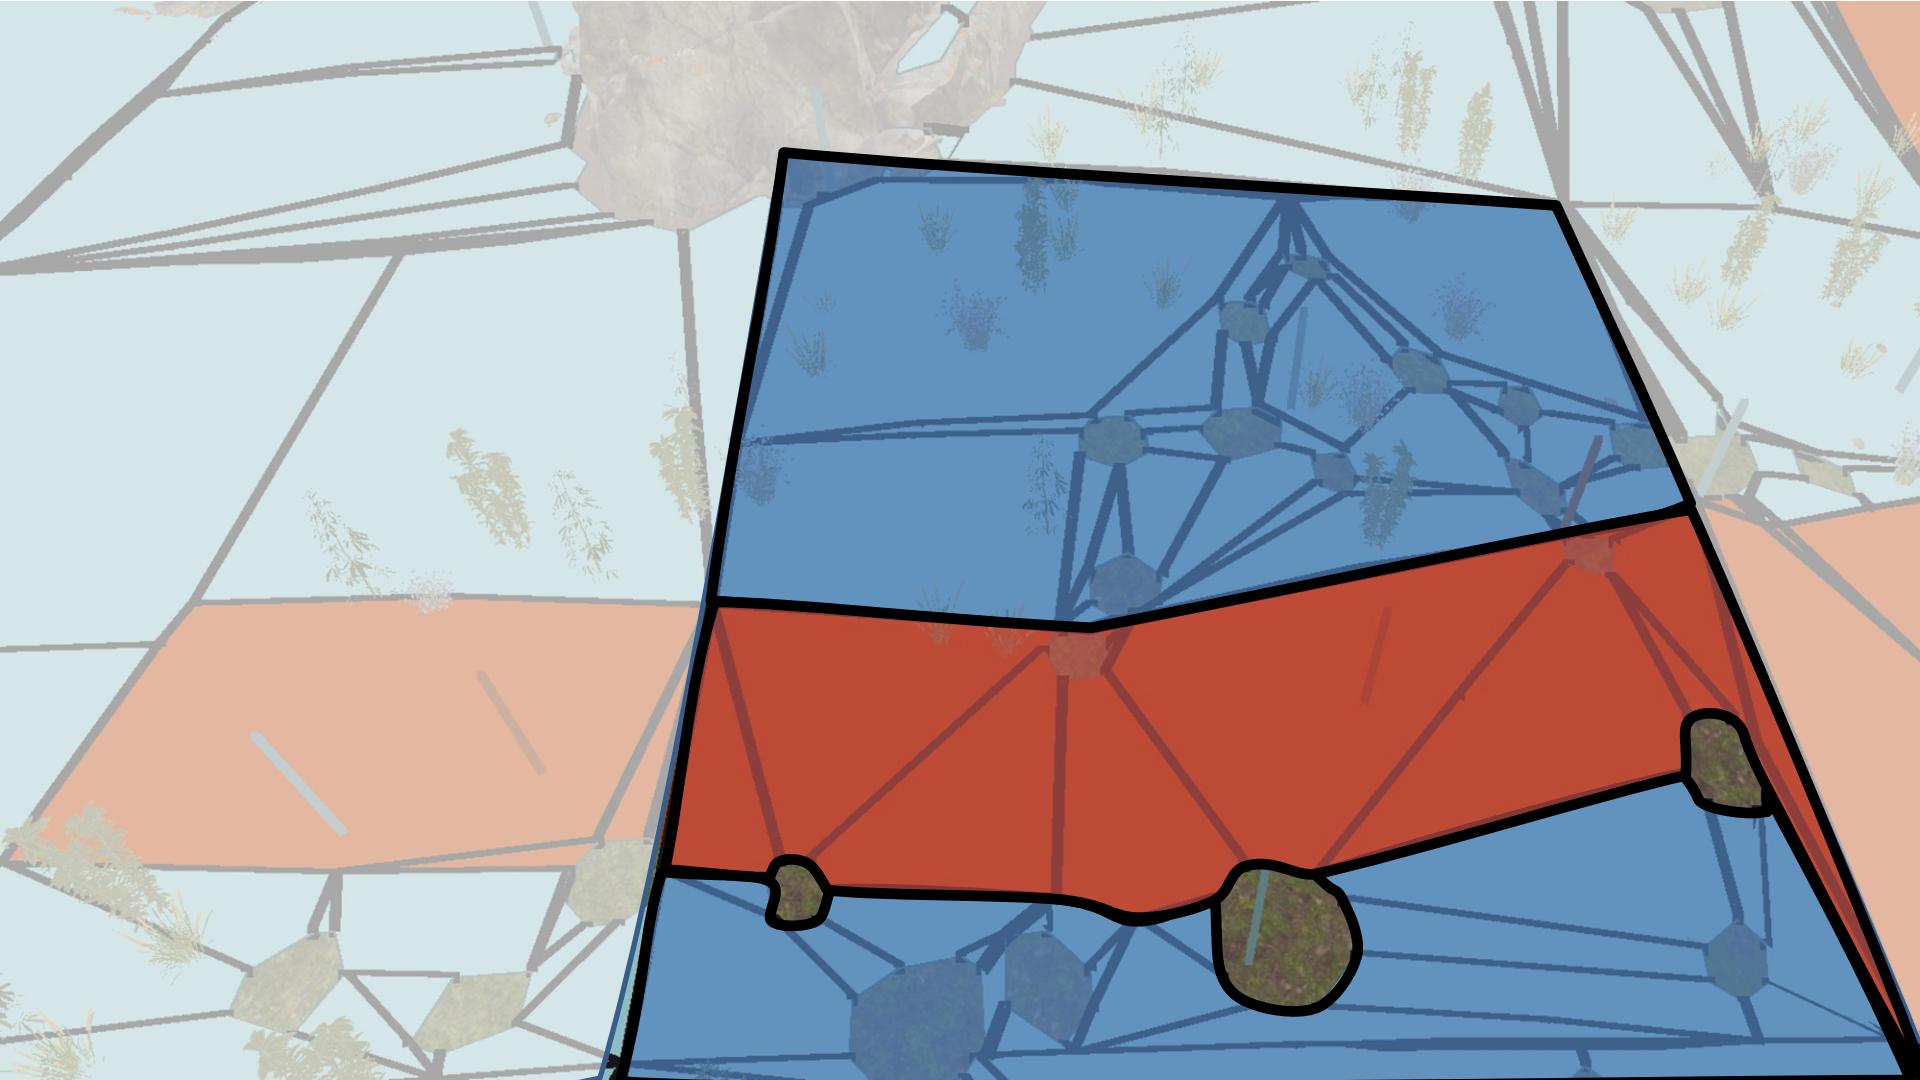

**NavMesh: 200k poly  
Abstraction: 50k nodes**

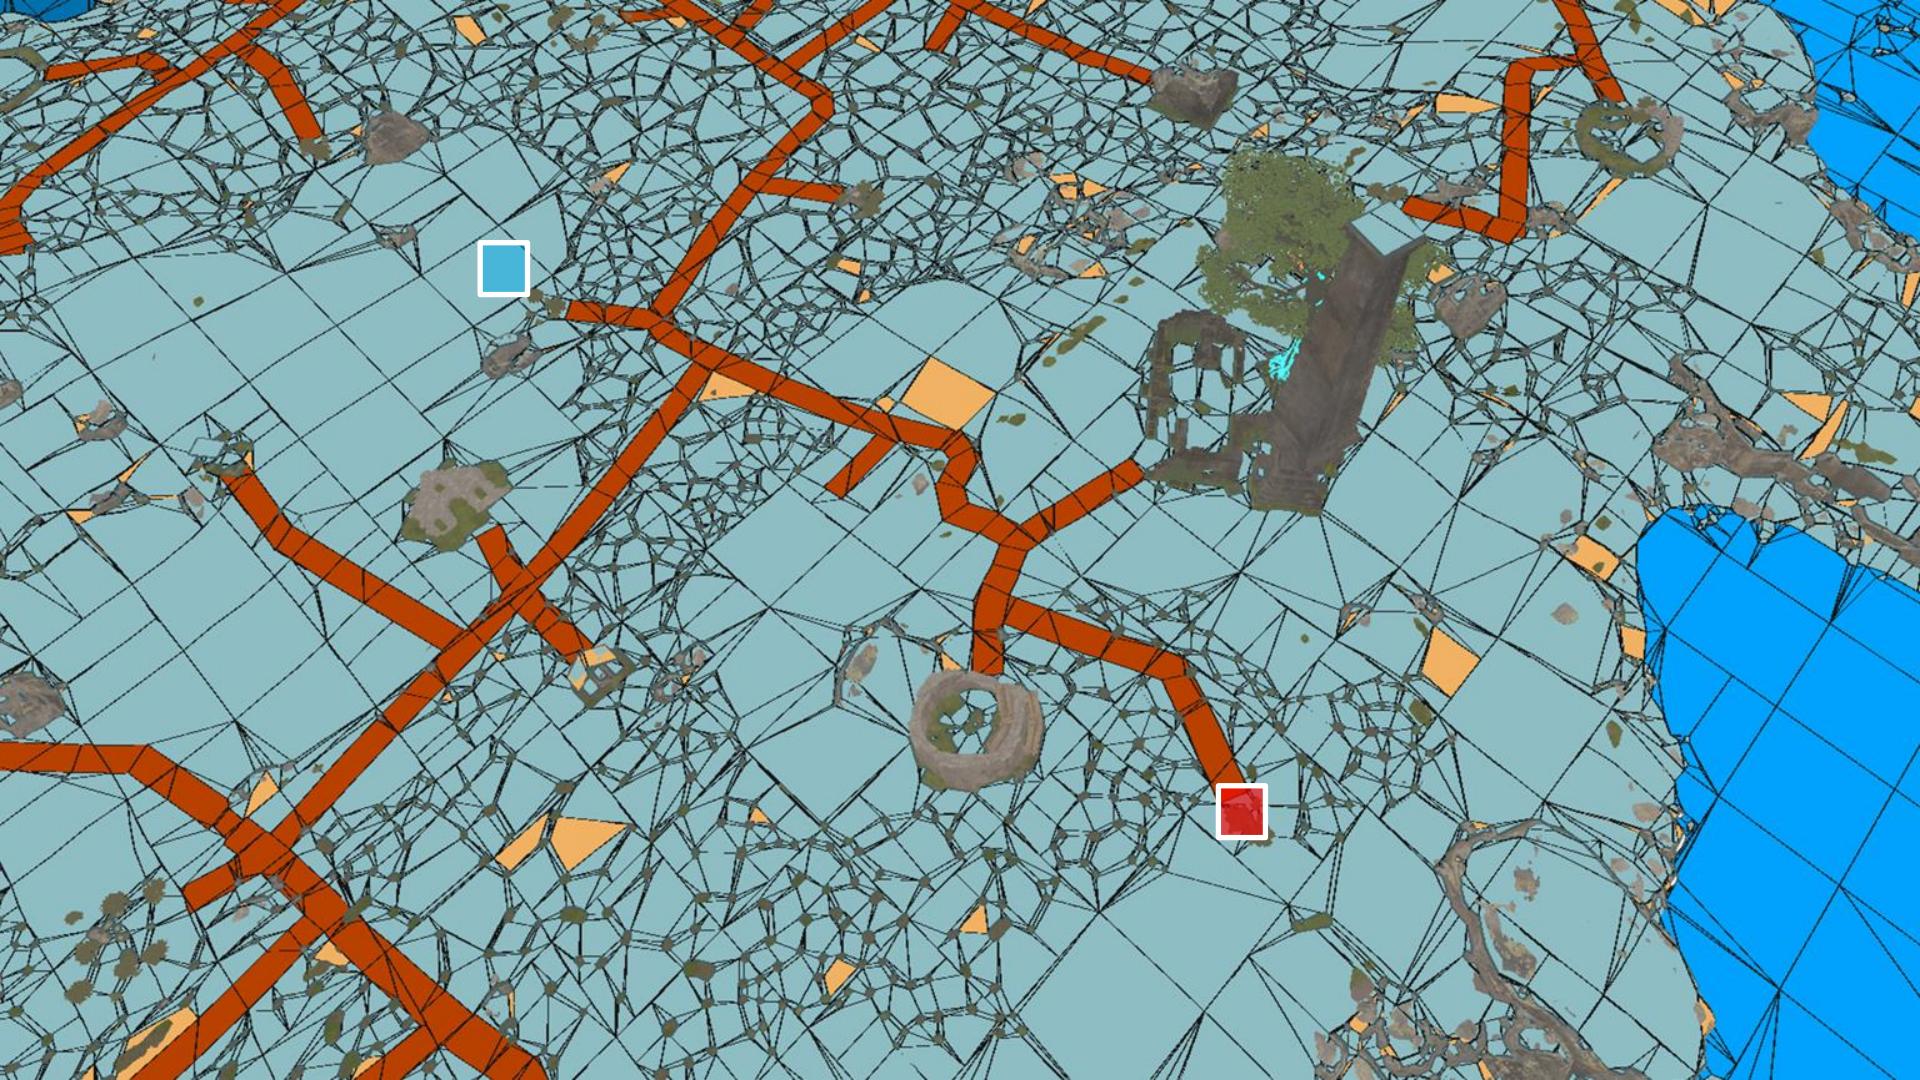

# CONNECTIVITY GRAPH

Labeling connected components

4x Speed

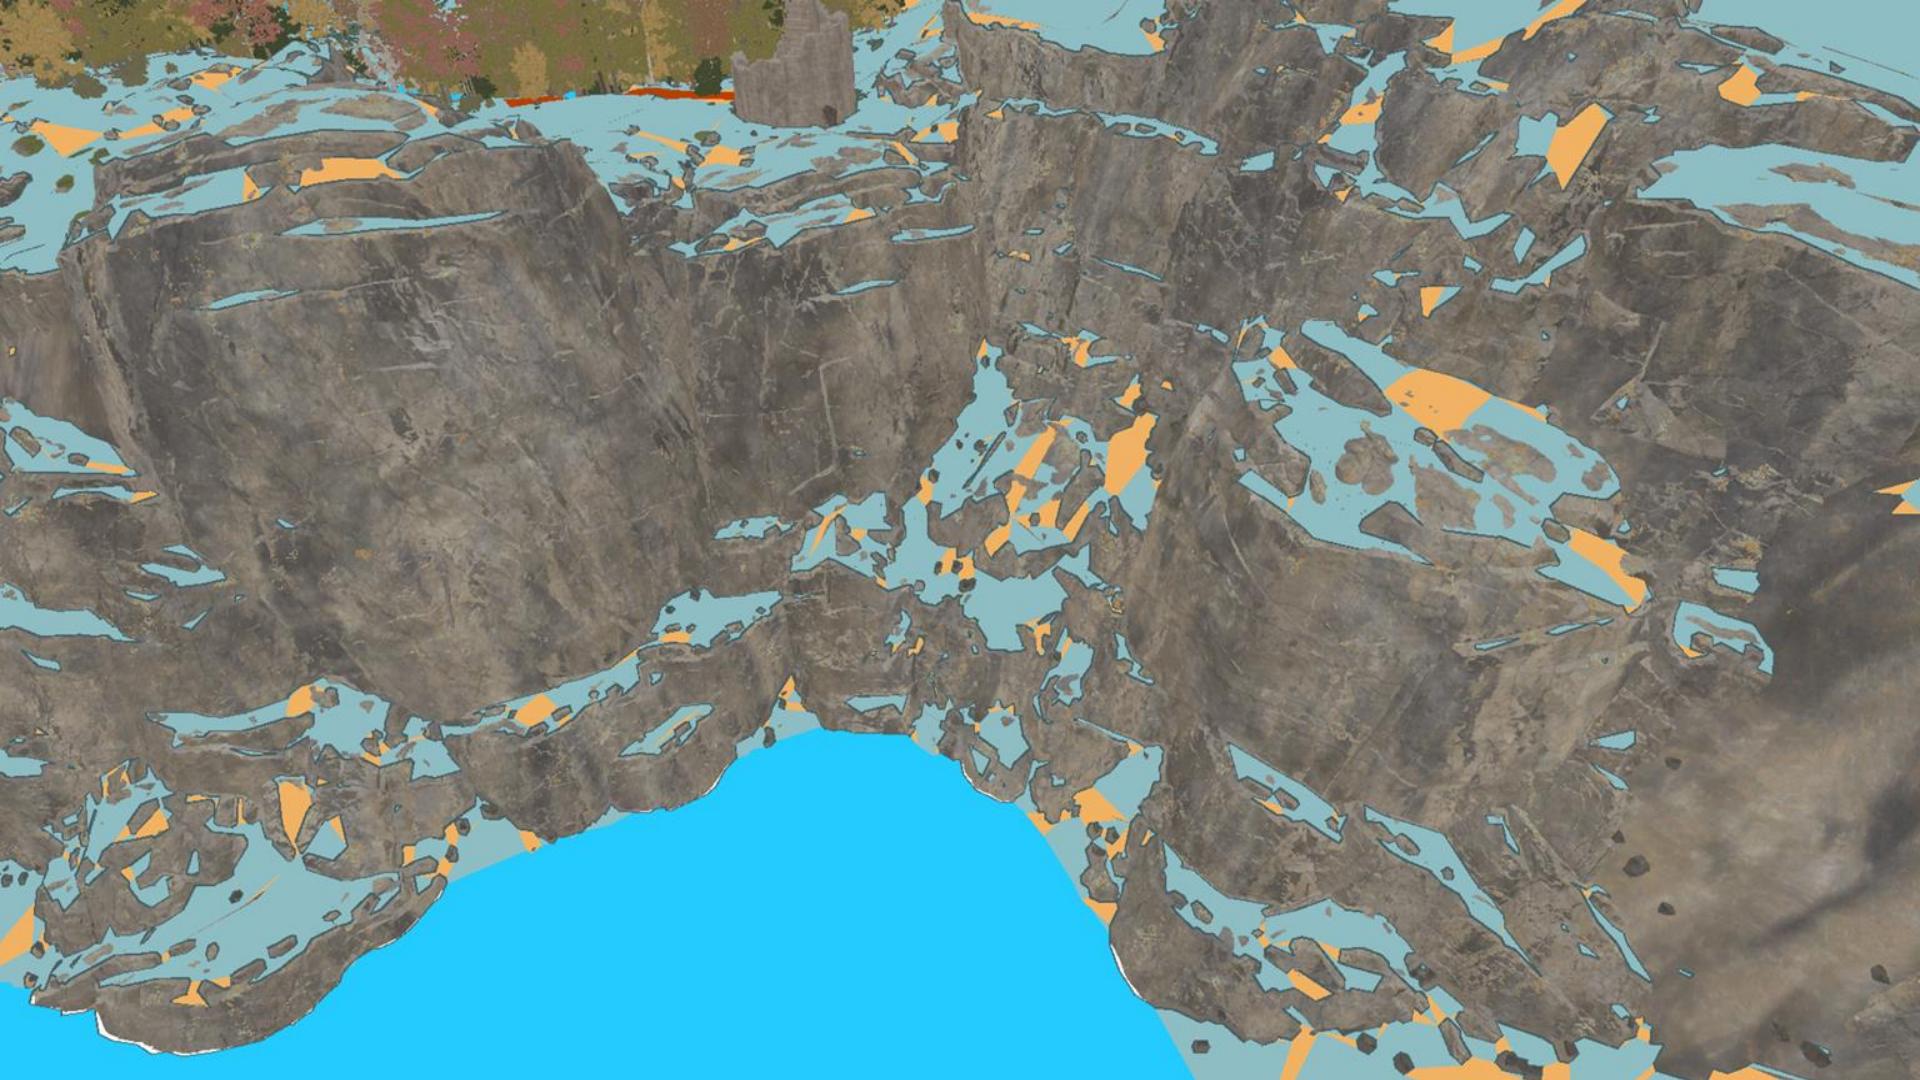

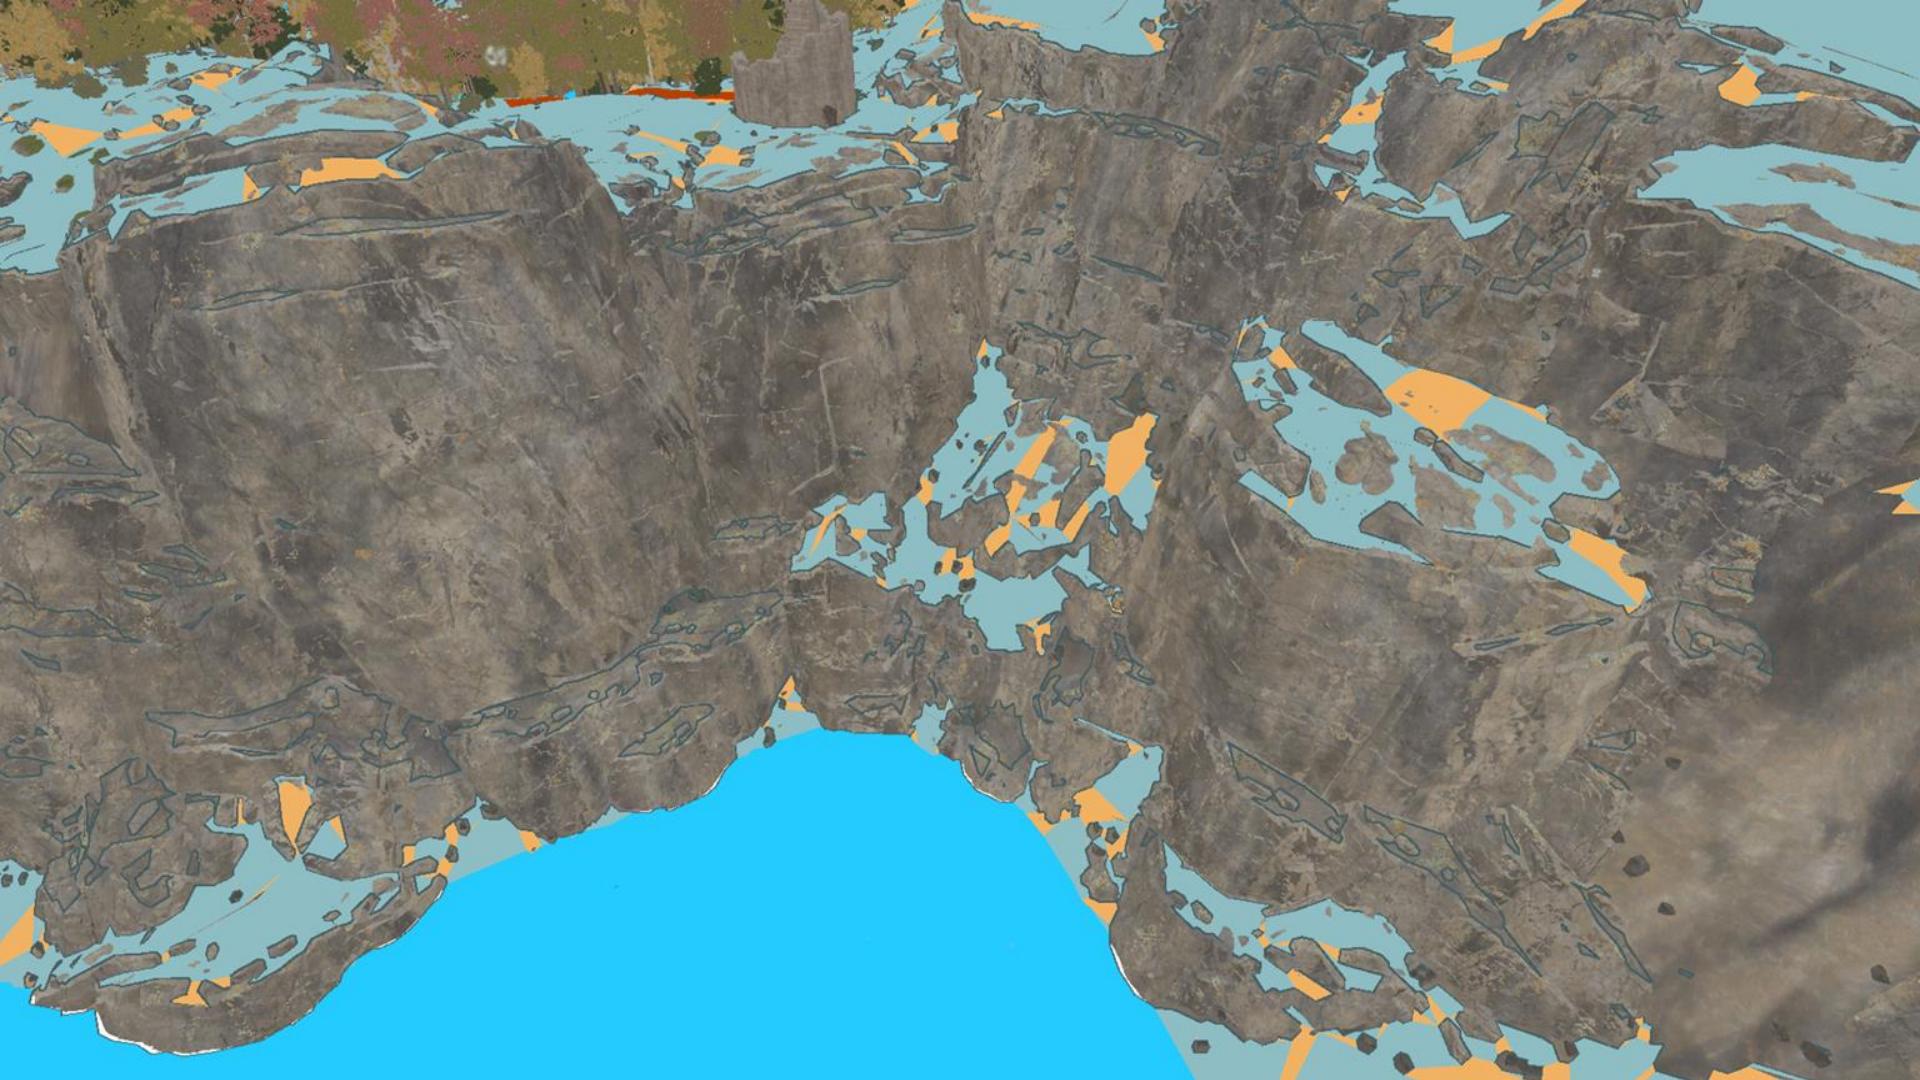

Charles  
*The Company*

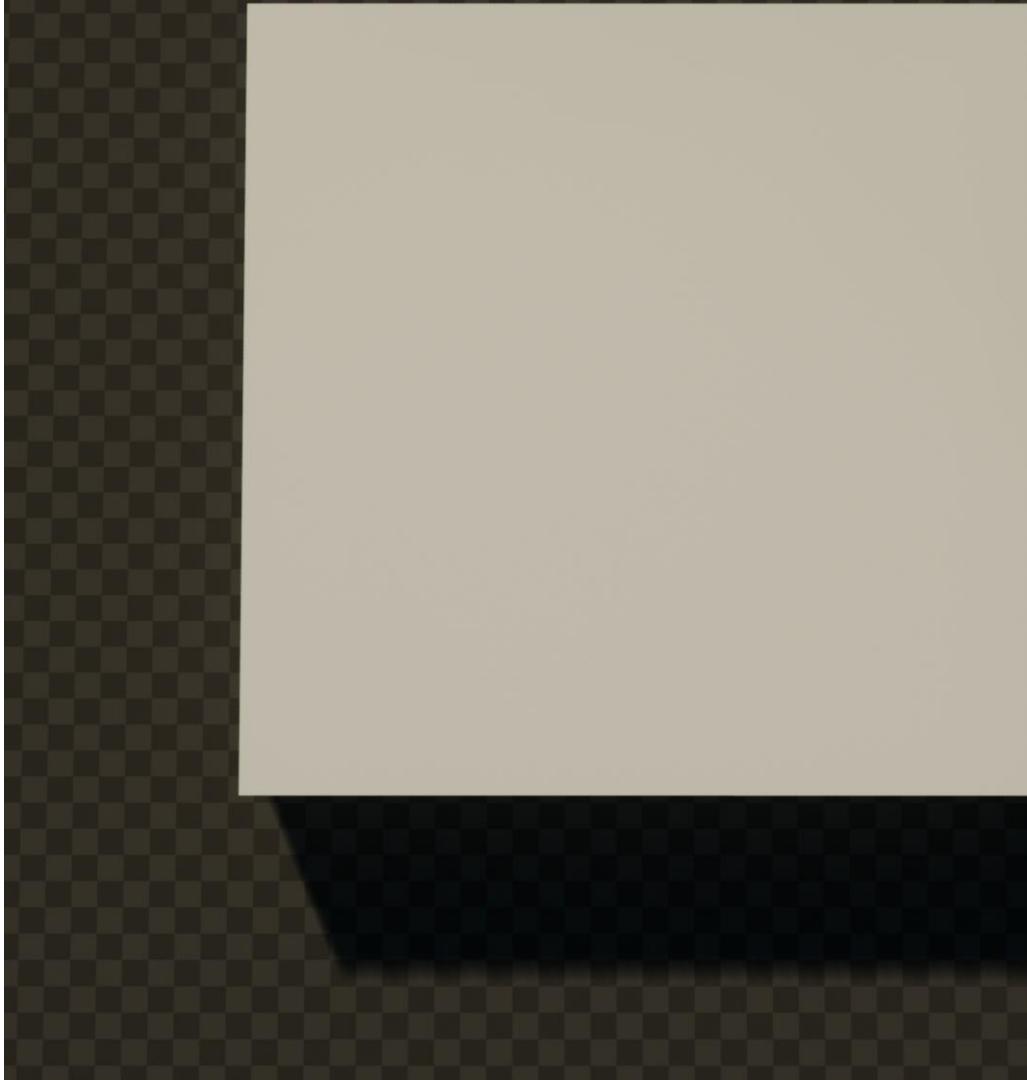

# HOW TO GENERATE - STATIC NAV

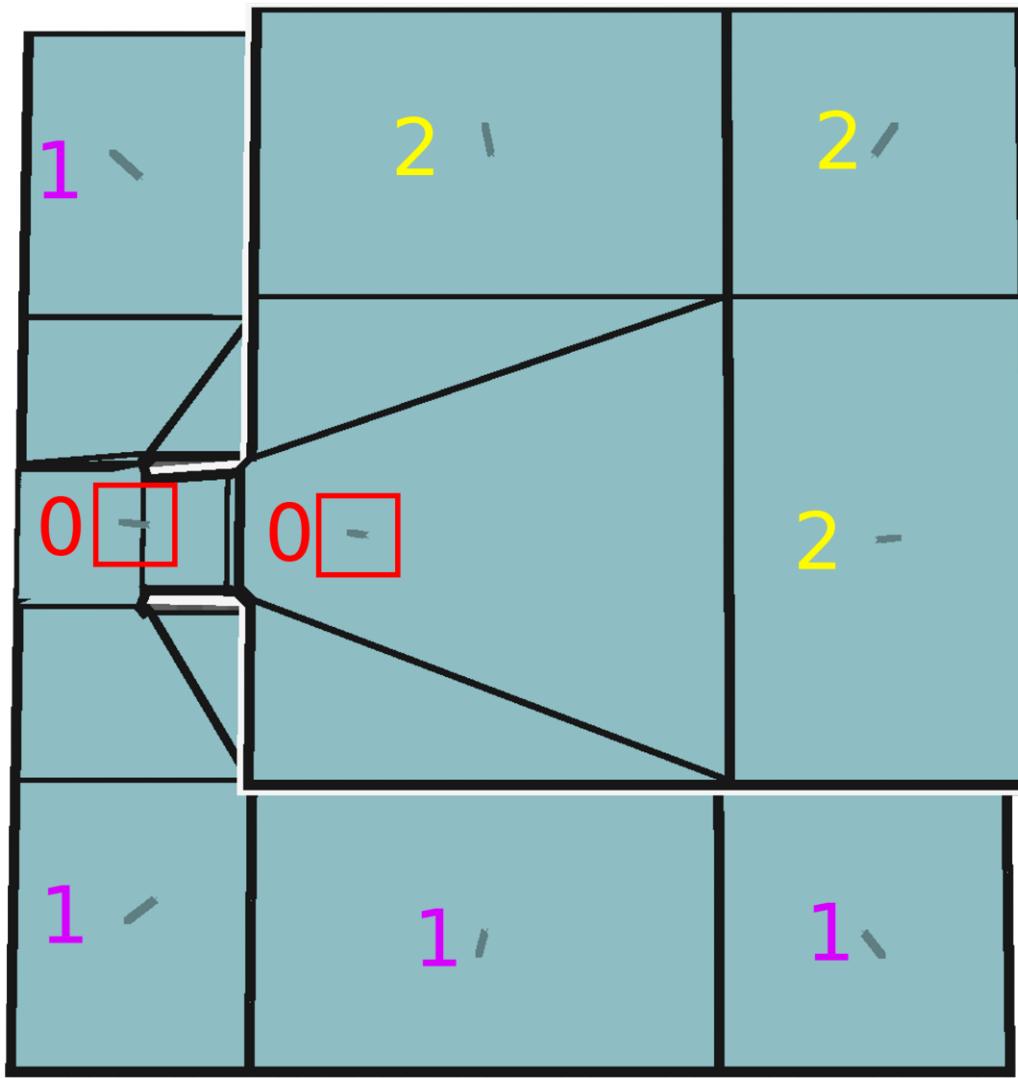

- Flood-fill using Breadth-First Search

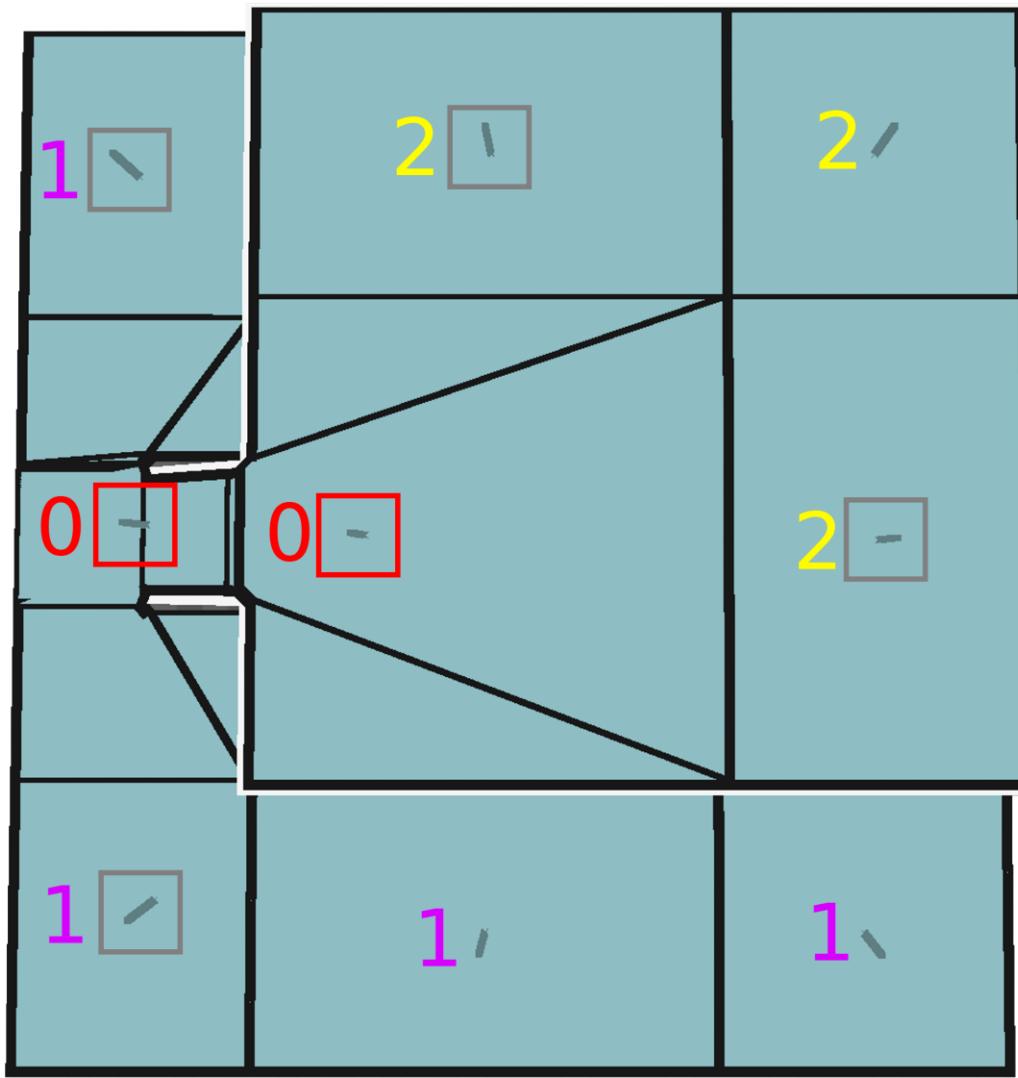

# HOW TO GENERATE - DYNAMIC NAV

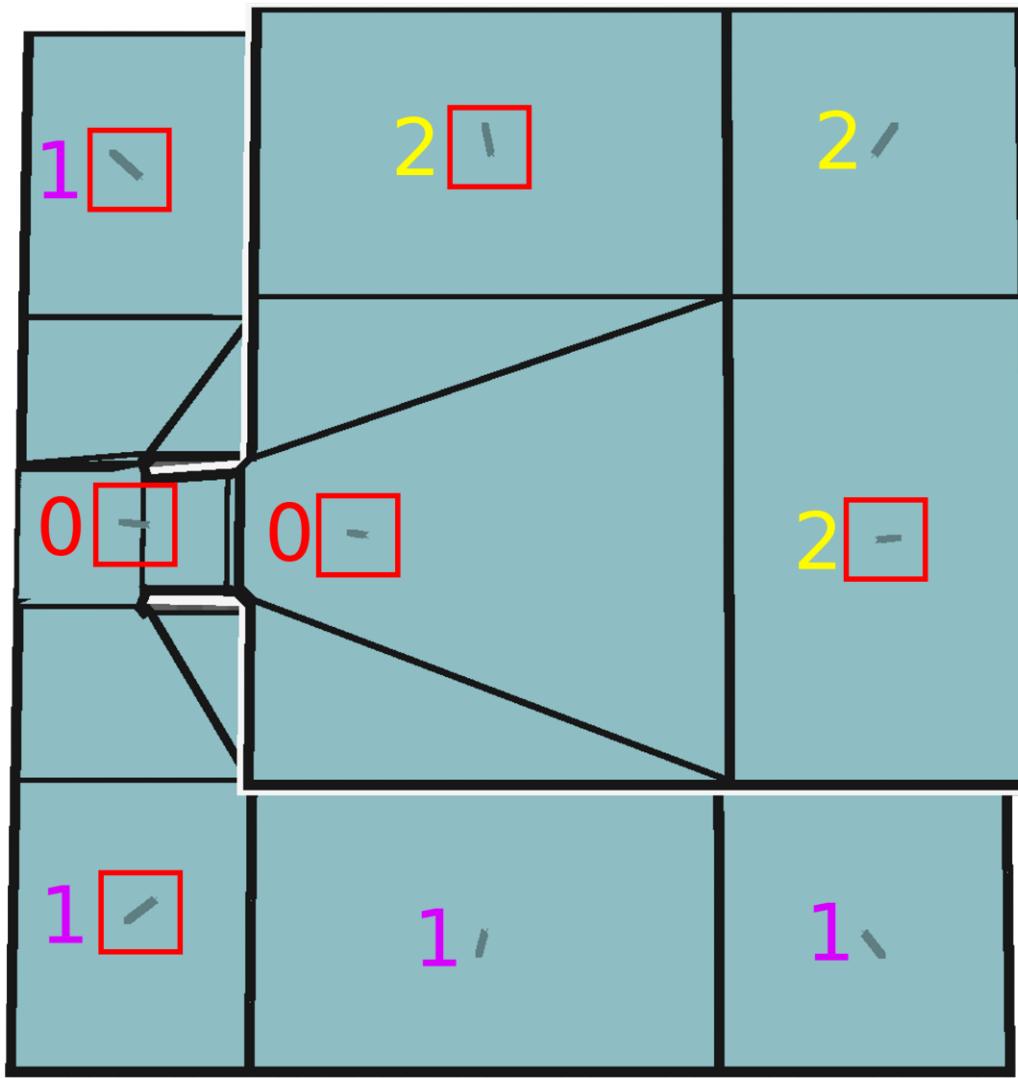

- Calculate initial labels using flood-fill
- Locally repair when tiles are repaired

# SUMMARY

- Adding an Abstract graph on top of Recast enables:
  - Longer distance pathfinding with terrain preferences
  - More efficient custom queries
    - Find closest unit
    - Connectivity Graph (Connected Components)
- Use K-means clustering to evenly distribute creature population in 3D space
