

**SECURITY AND PCI**

**TIM RAY**

**DEPARTMENT OF  
INFORMATION  
RESOURCES, STATE OF  
TEXAS**

# Bio

- ▣ Security Analyst for the Network/Security Operations Center (NSOC) Department of Information Resources, State of Texas
- ▣ IT full time since 1996
- ▣ Origin Systems 1990-1992
- ▣ Wing Commander III, Strike Commander, etc.
- ▣ MCSE, CISSP (2008), IAM/IEM, CAN

# Disclaimer

The views expressed here are my own, and not necessarily held by the State of Texas nor the Department of Information Resources.

# Three Things for Today:

- ▣ Current Threat Landscape (for background)
- ▣ PCI History and Issues
- ▣ PCI DSS Specifics Pertaining to Online Games

# Threats 2010

## ▣ What I see:

- At the state level, I see attacks from overseas.
- They are targeted at financial assets and political rivals
- There is much spear phishing
- Botnets delivered by drive-by or e-mail are an every day thing
- Many old attack signatures are present, just blocked.
- Many new attacks don't have signatures yet.
- SQL injection remains the most common single form of attack from the outside.

# Stuxnet

- ▣ Malware directed against Siemens software and controls
- ▣ Such controls are found in Iranian nuclear facilities
- ▣ Spreads on infected USB drives
- ▣ No less than four unpublished exploits
- ▣ Weird 'Myrtus' reference in code, reported 10/1/10.
- ▣ Called the first cyberweapon in DoD circles.

# Reading the Entrails

- ▣ Stuxnet copycats
- ▣ Low hanging fruit will be plucked
- ▣ Bad guys will go for volume targets
- ▣ Cloud computing applications will have to be secured better
- ▣ Graphics card malware will experience a large increase.

# Industry Information

- ❑ No good source of information on breaches in the game industry exists.
- ❑ We rely on anecdotal accounts, hearsay and rumor.
- ❑ However, we know who plays games, and they are a juicy target for criminals.
- ❑ The ESA report on gamer demographics, for 2010:

[http://www.theesa.com/facts/pdfs/ESA\\_Essential\\_Facts\\_2010.PDF](http://www.theesa.com/facts/pdfs/ESA_Essential_Facts_2010.PDF)

# Follow the Money

- ▣ Criminals go where the money is.
- ▣ Over 26% of gamers are 50 years old or older.
- ▣ The average age of a game buyer is 40.
- ▣ 67% of American households have a console for games, or use a dedicated PC for games.
- ▣ These groups are also the most targeted in bank fraud.
- ▣ Your customers are giving you their data for subscriptions and micro-transactions.
- ▣ Much of that data falls under the PCI umbrella.

# Overview of PCI

- ▣ Payment Card Industry Data Security Standard
- ▣ PCI DSS is a financial industry regulatory standard, NOT a law.
- ▣ PCI DSS is an example of industry self-regulation
- ▣ PCI DSS is reviewed and changed every two years.
- ▣ PCI compliance does not come in a box!
- ▣ PCI DSS is hotly debated at all levels of IT security

# PCI Definition Wall of Text!

- ▣ PCI: Payment Card Industry
- ▣ DSS: Data Security Standard
- ▣ QSA: Qualified Security Advisor
- ▣ ASV: Approved Scanning Vendor
- ▣ SAQ: Self-Assessment Questionnaire
- ▣ 'Merchant': Any entity that accepts payment cards from the five PCI founders (more on that below)
- ▣ 'Service Provider': Any entity that stores, processes or transmits cardholder data.
- ▣ 'Cardholder Data': Any personally identifiable data associated with a cardholder. Name, address, etc.

# Penalties, We Haz Dem!

- ▣ The Big Five (in a sec, I promise) don't penalize you.
- ▣ They charge your bank if you're found non-compliant, and the *bank* charges you.
- ▣ Check your merchant agreement.
- ▣ Typical amounts are \$5,000-\$100,000 per **month** of non-compliance.

# PCI History and Issues

- ❑ Officially adopted December 15<sup>th</sup>, 2004.
- ❑ Developed by the big five:

# History Cont.

- ❑ PCI DSS was developed so that the industry could self-regulate rather than face Congressional regulation because...

# Yet More History!

- ▣ It was developed as a minimum standard.
- ▣ Immediately after it was introduced, complaints started and no one adopted it.
- ▣ It was only a matter of time...

# Throwing the Book

- ▣ In 2005, CardSystems Solutions, Inc. revealed that they had been hacked for 40 million records.
- ▣ They were contractually obligated to delete cardholder data. They did not.
- ▣ They were storing it unencrypted.
- ▣ They were not PCI compliant.
- ▣ The Big Five cut them off. Forever.
- ▣ CardSystems Solutions was bought, then scuttled.
- ▣ Even so, PCI adoption was slow.

# But it was just the beginning...

- ▣ 2007 – TJX revealed 100 million records compromised.
- ▣ Also not PCI compliant.
- ▣ This was the impetus for widespread acceptance of PCI regulations.

# One More Time!

- ▣ In 2009,  reveals they were hacked.
- ▣ We'll never know how many records were compromised.
- ▣ Likely over 130 million.
- ▣ They were PCI compliant, **the day before** they announced the breach.
- ▣ It cost Heartland \$12.5 million and six months to regain compliance, on top of the lost business revenue.

# The Debate

- ❑ PCI is Security Theater. It makes money for the Big Five and is fundamentally a protection racket.

# On the Other Hand

- ❑ PCI is the beginning of a good security posture, and is meant to address the lowest fraction of the non-compliant while being relatively easy for the rest of the business world to follow.

Apologies and credit to Joshua Corman

# But Does It Work?

- ▣ The Verizon PCI report is an interesting read.
- ▣ [http://www.verizonbusiness.com/resources/reports/rp\\_2010-payment-card-industry-compliance-report\\_en\\_xg.pdf](http://www.verizonbusiness.com/resources/reports/rp_2010-payment-card-industry-compliance-report_en_xg.pdf)
- ▣ One of the only reports that has a large enough statistical sample to matter.
- ▣ Biased, because Verizon is a QSA
- ▣ The data indicates that compliant firms are much less likely to suffer a breach.

# At Last, Substance!

- ▣ So what does PCI DSS actually say?
- ▣ <https://www.pcisecuritystandards.org/index.shtml>

- ▣ And a cool license plate

# TL;DR!

- ▣ 12 areas of security you must cover if you want to take credit cards.
- ▣ You can transfer your PCI responsibilities to a service provider.
- ▣ You still have to fill out the SAQ and a few other documents.
- ▣ Hire a consultant to help you through this!

# Twelve Areas

- ▣ **Build and Maintain a Secure Network**
- ▣ *Requirement 1:* Install and maintain a firewall configuration to protect cardholder data
- ▣ *Requirement 2:* Do not use vendor-supplied defaults for system passwords and other security parameters
- ▣ **Protect Cardholder Data**
- ▣ *Requirement 3:* Protect stored cardholder data
- ▣ *Requirement 4:* Encrypt transmission of cardholder data across open, public networks
- ▣ **Maintain a Vulnerability Management Program**
- ▣ *Requirement 5:* Use and regularly update anti-virus software
- ▣ *Requirement 6:* Develop and maintain secure systems and applications
- ▣ **Implement Strong Access Control Measures**
- ▣ *Requirement 7:* Restrict access to cardholder data by business need-to-know
- ▣ *Requirement 8:* Assign a unique ID to each person with computer access
- ▣ *Requirement 9:* Restrict physical access to cardholder data
- ▣ **Regularly Monitor and Test Networks**
- ▣ *Requirement 10:* Track and monitor all access to network resources and cardholder data
- ▣ *Requirement 11:* Regularly test security systems and processes
- ▣ **Maintain an Information Security Policy**
- ▣ *Requirement 12:* Maintain a policy that addresses information security

# Twelve Areas, Cont.

- ▣ Each of the requirements above is exhaustively covered in the PCI standard.
- ▣ Remember it's a minimum standard and a starting place.
- ▣ Compliance is checked by a QSA and ASV of your choice!

# So How Do We Do It?

- ▣ The simple answer is to use a third party provider.
- ▣ The system benefits companies that can make the commitment to handle large numbers of transactions securely.
- ▣ It's to your benefit to distance your firm from potential breach liability.
- ▣ There are several third party providers that would be ideal for the games industry.

# Best-Case for a Game Company

SAQ Validation Type 1 in the *PCI DSS Self-Assessment Questionnaire Instructions and Guidelines*, do not store cardholder data in electronic format and do not process or transmit any cardholder data on their premises. Such merchants must validate compliance by completing SAQ A and the associated Attestation of Compliance, confirming that:

- ▣ Your company handles only card-not-present (e-commerce or mail/telephone-order) transactions;
- ▣ Your company does not store, process, or transmit any cardholder data on your premises, but relies entirely on third party service provider(s) to handle these functions;
- ▣ Your company has confirmed that the third party service provider(s) handling storage, processing, and/or transmission of cardholder data is PCI DSS compliant;
- ▣ Your company retains only paper reports or receipts with cardholder data, and these documents are not received electronically; **and**
- ▣ Your company does not store any cardholder data in electronic format.

# Last Example

- ▣ The closest example to a game company I could find was:

- ▣ They suffered a data breach in 2004.
- ▣ They rolled their own card reader software
- ▣ It stored mag track data (violating PCI)
- ▣ Total cost to sort out the breach: \$5.5 million.
