“Biometrics...is essentially adding more communication bandwidth between the game & the person playing it, especially in ways the player isn't necessarily conscious of.

Biometrics gives us more visibility. Also, gaze tracking. We think gaze tracking is going to turn out to be super important.”

<http://www.theverge.com/2013/1/8/3852144/gabe-newell-interview-steam-box-future-of-gaming>

# Biometrics look cool & sciency

(But how useful are they?)

# Advantages

- Definite
  - Objective, always on, countable, novelty, it looks impressive, and can be collected automatically
- Debatable
  - Covert, and produces consistent repeatable results.
  - Unconscious emotions?

# Disadvantages

- Definite
  - Expensive, intrusive, difficult and time consuming to analyse and setup
- Debatable
  - Redundant

# Some GUR Industry Impressions

“We don’t use it...because the costs (both in equipment and time) has always seemed to outweigh the benefits. Often we are better served doing "standard" usability/playtests as we can do them quicker, faster, and cheaper. ”

“...we also don't use many of the biometrics due to the potentially invasive nature of some of the measuring instruments. We strive to provide a neutral, low stress environment for our tests”

“...we can imagine the benefits of using biometrics and such in some cases, the imperatives of production usually mean that we wouldn't have time to use them in an efficient manner”

# Measurement

Trends or Right now?

Artifact? Or Real?

# METHODS

# EEG

# EEG

- **Alpha** 8-14 Hz (calm, mental work)
- **Beta** 14-30 Hz (focused, engaged mental work)
- Delta 1-4 Hz (trance, sleep, fatigue)
- Theta 4-8 Hz (emotions, sensations)
- Gamma 30-50 Hz (Information processing, not often measured)

Mostly arousal/workload

# The Muscle Issue

# Electromyography (EMG)

# Measuring Muscles

# Back to EEG

- Possibilities an input (especially in combination with EMG)

	Measure		Interpret	Player Use		Best For
EEG	MED	HIGH	HIGH	MED	HIGH	Arousal
EMG	HIGH		MED	HIGH		Valence

# Facial Recognition

# The GAMEFACE Issue

Marketing

Reality

# Technologically Aided Observation

- Computer vision, tricky but advancing every day
- Kids faces, they change

	Measure		Interpret	Player Use	Best For
Facial Recognition	LOW	MED	MED	LOW	Valence

# Cardiovascular

— THE DARK DESCENT —

Biometrics (Skin conductance)

Gortag (Windranger) just purchased Observer Ward!

Minimap and hero portrait area. The minimap shows a green field with a large green aura. The hero portrait shows Gortag (Windranger) with a green scarf and a green aura. The portrait is labeled with a level of 8 and a health/mana bar showing 775/1200.

Hero status and abilities area. The hero's name is GORTAG (WINDRANGER). The health/mana bar shows 404/815. The abilities are listed as Q (110), W (120), E (100), and R (100). The hero's stats are shown as 71+9, 32+3, 26+3, and 40+3. The hero's level is 8.

Shop area. The shop shows 102 gold and a SHOP button. The shop items are listed as 4, 1, 2, and 1. The shop also shows a mouse icon and a 2x2 grid of items. The shop items are labeled with their names: MOUSE, and others. The shop also shows a 102 gold value and a SHOP button.

# Biometric Methods Summary

	Measure		Interpret	Player Use		Best For
Eye tracking	LOW		MED	LOW		Gaze
Cardiovascular	LOW		MED	LOW	MED	Arousal/MW
Skin Conductance	MED		MED	MED		Arousal
Facial Recognition	LOW	MED	MED	LOW		Valence
EEG	MED	HIGH	HIGH	MED	HIGH	Arousal
EMG	HIGH		MED	HIGH		Valence

# Biometric Games

# Input and Adaptation

- How to deal with False alarms and Misses?

Confirmation  
(Not as cool)

# Input and Adaptation

- Keep it relatively simple

## THE KILLER REVEALED

**TOBII EYEX BENEFIT: IMPROVED ARTIFICIAL INTELLIGENCE OF THE GAME**

# Input and Adaptation

- Is there an easier and better way?

# Input and Adaptation

- Cheating
- Challenge is fun, control is important

# Problem Statement

Collection/Measurement of  
biometrics increasingly easy BUT  
interpretation is HARD

# Solution? Presentation

People live to  
interpret, and  
interpret to  
live

**“[adding biometric readings for  
players to see was] the most  
enjoyable thing we have done”  
- Valve**

# Disagree?

Make something awesome, that would be great

# QUESTIONS?
