// Prologue
AddStoryEvent  Story  Prologue
AddEffect      Message You have never heard Grace that panicked before. She is usually so
                  calm and collected. As your car barrels down the dirt road, you wonder what could have
                  spooked her enough to call you out to her isolated estate in the country.
AddEffect      Message As you approach the turn for the property, the road is pitch black in
                  front of you. Suddenly, your headlights go out and something strikes the side of your car
                  with a sickening crunch. The vehicle veers off the road and crashes into the ditch.
AddEffect      Message Unable to get the car started again, you head out on foot and make
                  your way through the woods toward Grace's home. The darkness presses in around you, and you
                  keep thinking you sense something moving through the forest.
AddEffect      Message You emerge from the forest in front of the massive estate and rap on
                  the oak double doors. Grace answers almost immediately, a look of relief washing over her
                  face. "Thank god you are here. It's getting worse by the minute. We've got to get out of
                  here! Where is your car?"
AddEffect      Message As you break the news to her, Grace's expression changes to despair.
                  "No! What are we going to do now? My entire family is here and that ... creature is hunting
                  us! Please, help!"
AddEffect      Message Investigators begin the story with the Wither Spell and the .18
                  Derringer, %i, %i, and %i Common Items. Each investigator begins with 1 Clue.

Creating Hard Divisions

## TEST

Skill icons can appear embedded in parentheses following a short narrative. This is a test declaration; it indicates that the investigator must test the specified skill. When an investigator resolves a test, he performs the following steps:

- Determine Dice Pool:** The investigator determines the number of dice he will roll. This number is his dice pool.
  - He starts with the declared value of the skill being tested.
  - He adds or subtracts test modifiers. A test modifier is a number that follows the skill icon in the effect text preceded by a plus sign (+) or a minus sign (-).
  - He adds or subtracts all dice specified by other effects such as items or Conditions.
- Roll Dice:** He rolls a number of dice equal to his dice pool.
  - If his dice pool is less than one, he rolls one die instead.
  - If his dice pool is greater than the number of dice available, he rolls as many dice as possible, records the results, and rolls the remaining dice again until he has rolled dice equal to his dice pool.
- Reroll & Convert Dice:** He may use any effects that allow him to reroll dice or convert die results, including spending Clues to convert investigation results (C) to success results (S).
- Determine Results:** The total number of S rolled is his test result. The consequences of passing or failing the test are determined by the effect that declared the test.
  - A test declaration may include a number separated from the skill icon by a semicolon. This is the test difficulty. The test difficulty indicates the test result required to pass the test. If the test result is less than the test difficulty, the investigator fails the test.
  - A test declaration that includes the word "negates" following the skill icon indicates that the test prevents Damage or Horror. For each S rolled, the investigator prevents one Damage or one Horror.

➤ Effects that are dependent on a test are preceded by "if you pass" or "if you fail." Any effect in that sentence occurs only if the investigator passes or fails the test, respectively. Any effect after the period or part of a new paragraph is independent from previous effects.

**Related Topics:** App, Clue, Dice, Skills

## FORBIDDEN WORDS

*You fear words will be your downfall, and you think to yourself that you shall never speak again.*

You cannot speak. You win or lose the game as normal.

**“Why is an app worth the  
hassle?”**

# ✓ Interfacing

App is “Blind”

Interfacing is Expensive

Who is doing the work?

Interfacing with a device  
distracts from the group  
experience.

*World of Yo-Ho  
iello*

Am I doing work for  
the app?

-or-

Is the app doing  
work for me?

Continue

# From One Node:

- Where an investigator is
- When they were there
- How much they pass/fail
- Roughly how much damage has been handed out

# Takeaways

- Prototype early
- Be careful of scope
- Divide mechanics between mediums

## Tabletop

- Flexible timing
- Tactical interface
- Social interaction

## Digital

- Real-time interaction
- Hidden information
- Back-end complexity

- Make interfacing worth the hassle

# Questions?
