testing

Problems of 3rd party tools (Unity):

- build for „beginners“
- no unified file management
- tedious setup (content!)

Problems of 3rd party tools:

- only for „standard mechanics“
- dependent on support / hard to maintain
- conflicts between tools

the Greener Woods

**Can we optimize
our workflow ?**

Workflow analysis

Customer Journey with team:

- * Are there any repetitive tasks? Can they be automated?
- * What steals our creative time?
- * Defining „overlapping tasks“ (between departments).
- * What applications are we using? Are they working?
- * What are the teams most „hated“ tasks?

how

design considerations

EvilSystem

EvilSystem design considerations designers

- **represent full workflow** (design / art / code / qa)
- **power/access for game designers** (content / logic)
- **dialogue handling** (branching / localisation)

EvilSystem

design considerations

coders

- **maintainable & independent** (Unity / 3rd party tools)
- **flexible** (features / mechanics / iterations)
- **unified file management** (one place)

EvilSystem

design considerations

important

- **read- & writeable logic** (~~source code~~)
- **independent of specific mechanics**

designers

**I can change
everything
on my own!**

coders

**One
accessible
place!**

important

**Love to reuse for
future projects!**

how

implementation

Scripting

additional
Utilities

Evilsystem tech

Unity

EvilSystem

Content
Management

Visual
Scripting

additional
Utilities

Content Management

- **content model** saves entities as „abstract entity contents“
- **entities** can receive
 - **string, integer** or **bool** variables
 - **GameObjects** on **runtime**
 - different „**states**“ use „**behaviors**“
(e.g. door open or door closed)

Content Management

- **entities** can be added to **categories**
- **entities** manage
 - **scene representation**
(e.g. rooms & closeups)
 - **UI elements**

**A flexible &
maintainable
system!**

Evilsystem designers

- **2,5D adventure**
- gameplay driven
- multiplatform
- ~sequential levels
- dialogues (voice!)
- puzzles

Squirrel & Bear: Europe (in development)

Unity

EvilSystem

Content
Management

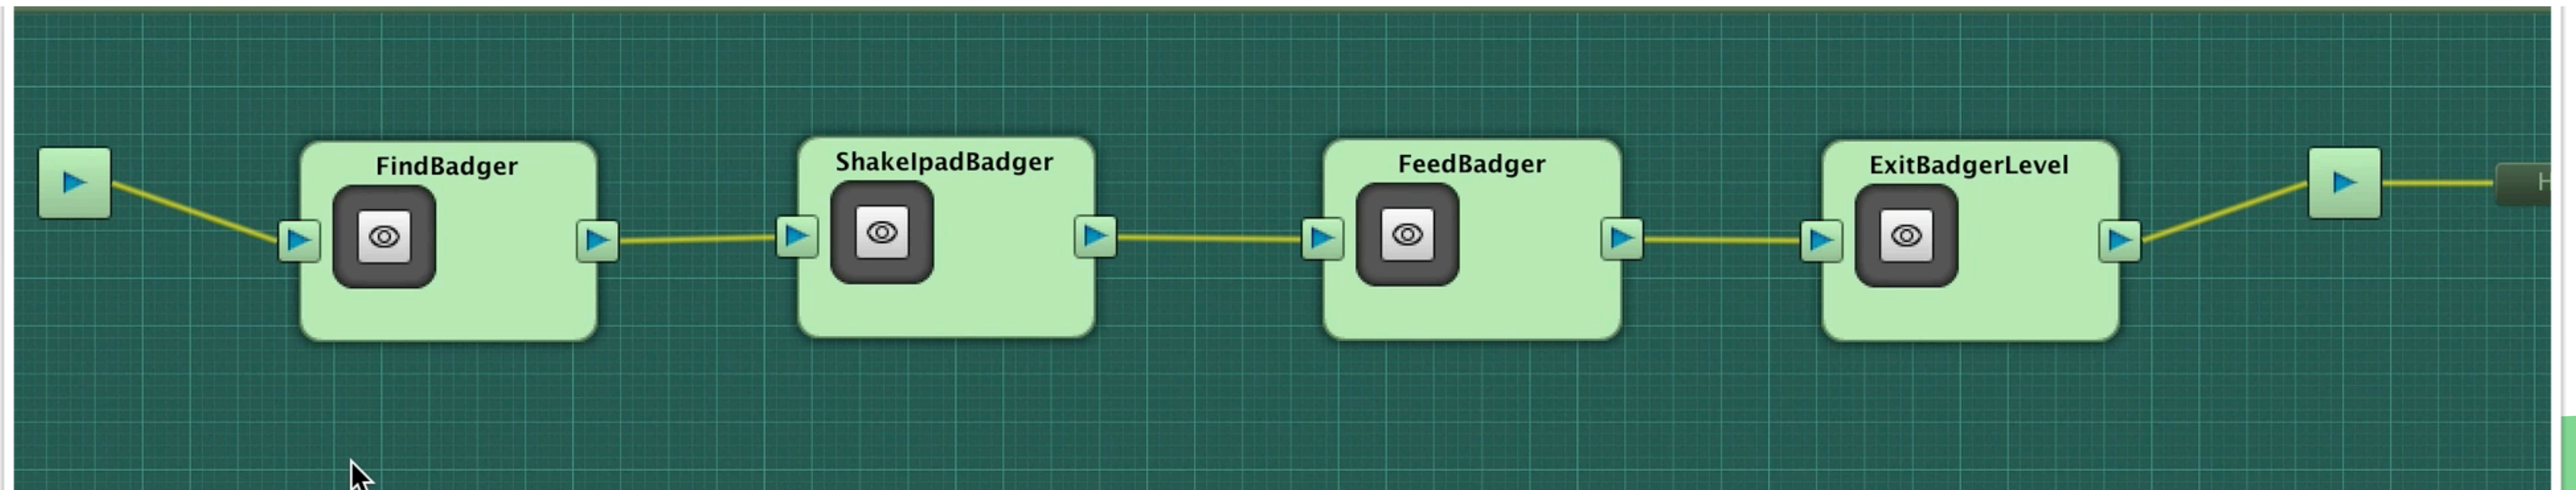

Visual
Scripting

additional
Utilities

Visual Scripting

node editor defines **game flow**

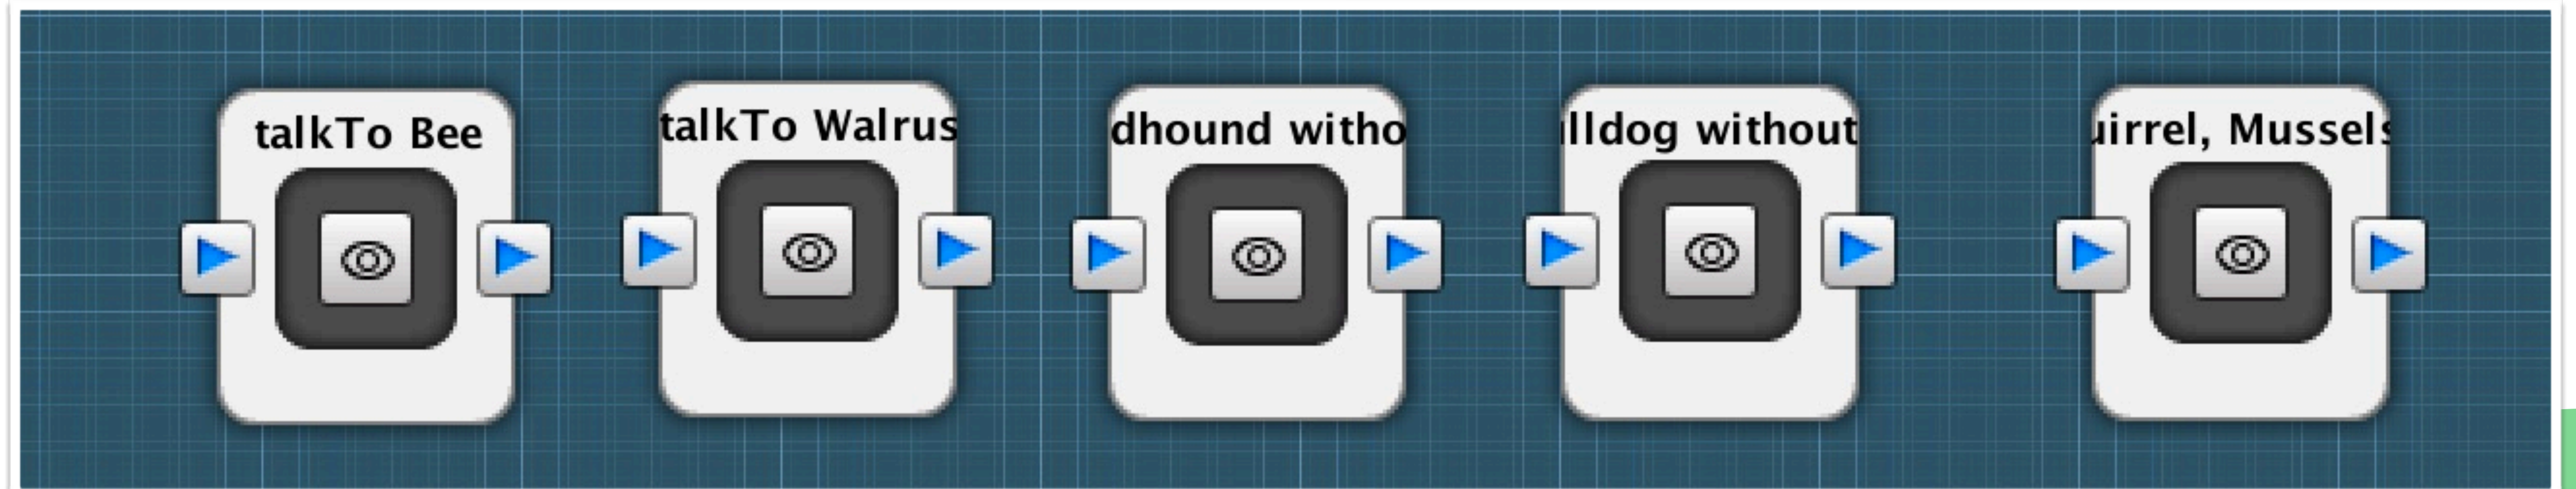

- **game flow** follows **one node** after the other on runtime
- nodes follow **hierarchy** of **nested elements** (!lower level)

Visual Scripting

game flow

- calls **tasks** / **UI elements**
- reacts to **GameEvents** / **conditions**

Setup

Bruges

Position	Story	Task	Animal	Learning	Have to	Can do
1	SQB arrive outside of Bruges with plane. Plane can slide on screen first, then SQB can walk in (if easier).	SQ to set task: find Bee (follow pollen dust).	SQ+B	How does Landscape outside Bruges look like	x	

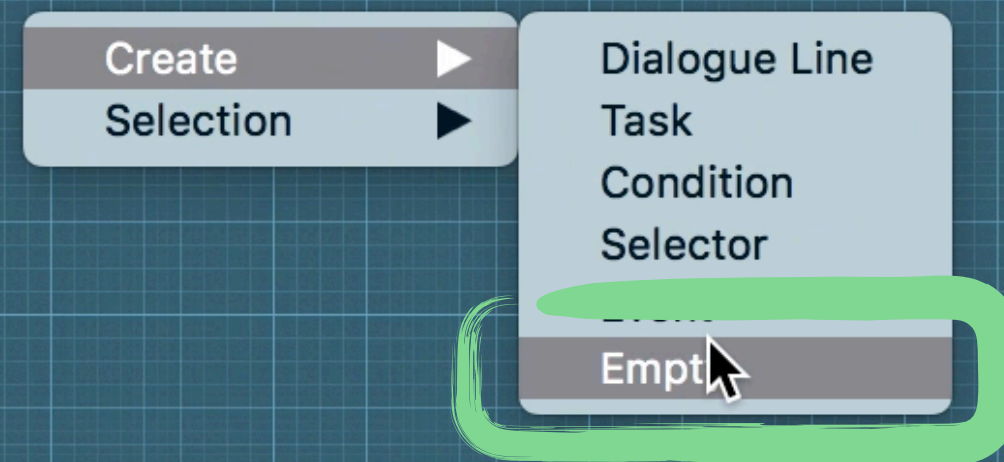

5	SQ loves climbing up towers, churches and other things.	<ul style="list-style-type: none">• SQ: Follow pollen dust• SQ: climb up to find bee.• Find hidden facts about Belfry (and his bell).	SQ, Bee	Hidden Facts (1,2)	x	x
6	SQ found bee. Translation Bee, Happy to see SQB (Bee savers). Happy to help. Wants to fly into SQ ear, but its too small. Need to fly into B ear. Bee flies down. SQ has to follow.	SQ: Tap bee to talk.	SQ+B, Bee	Bee can only translate through Bear.	x	

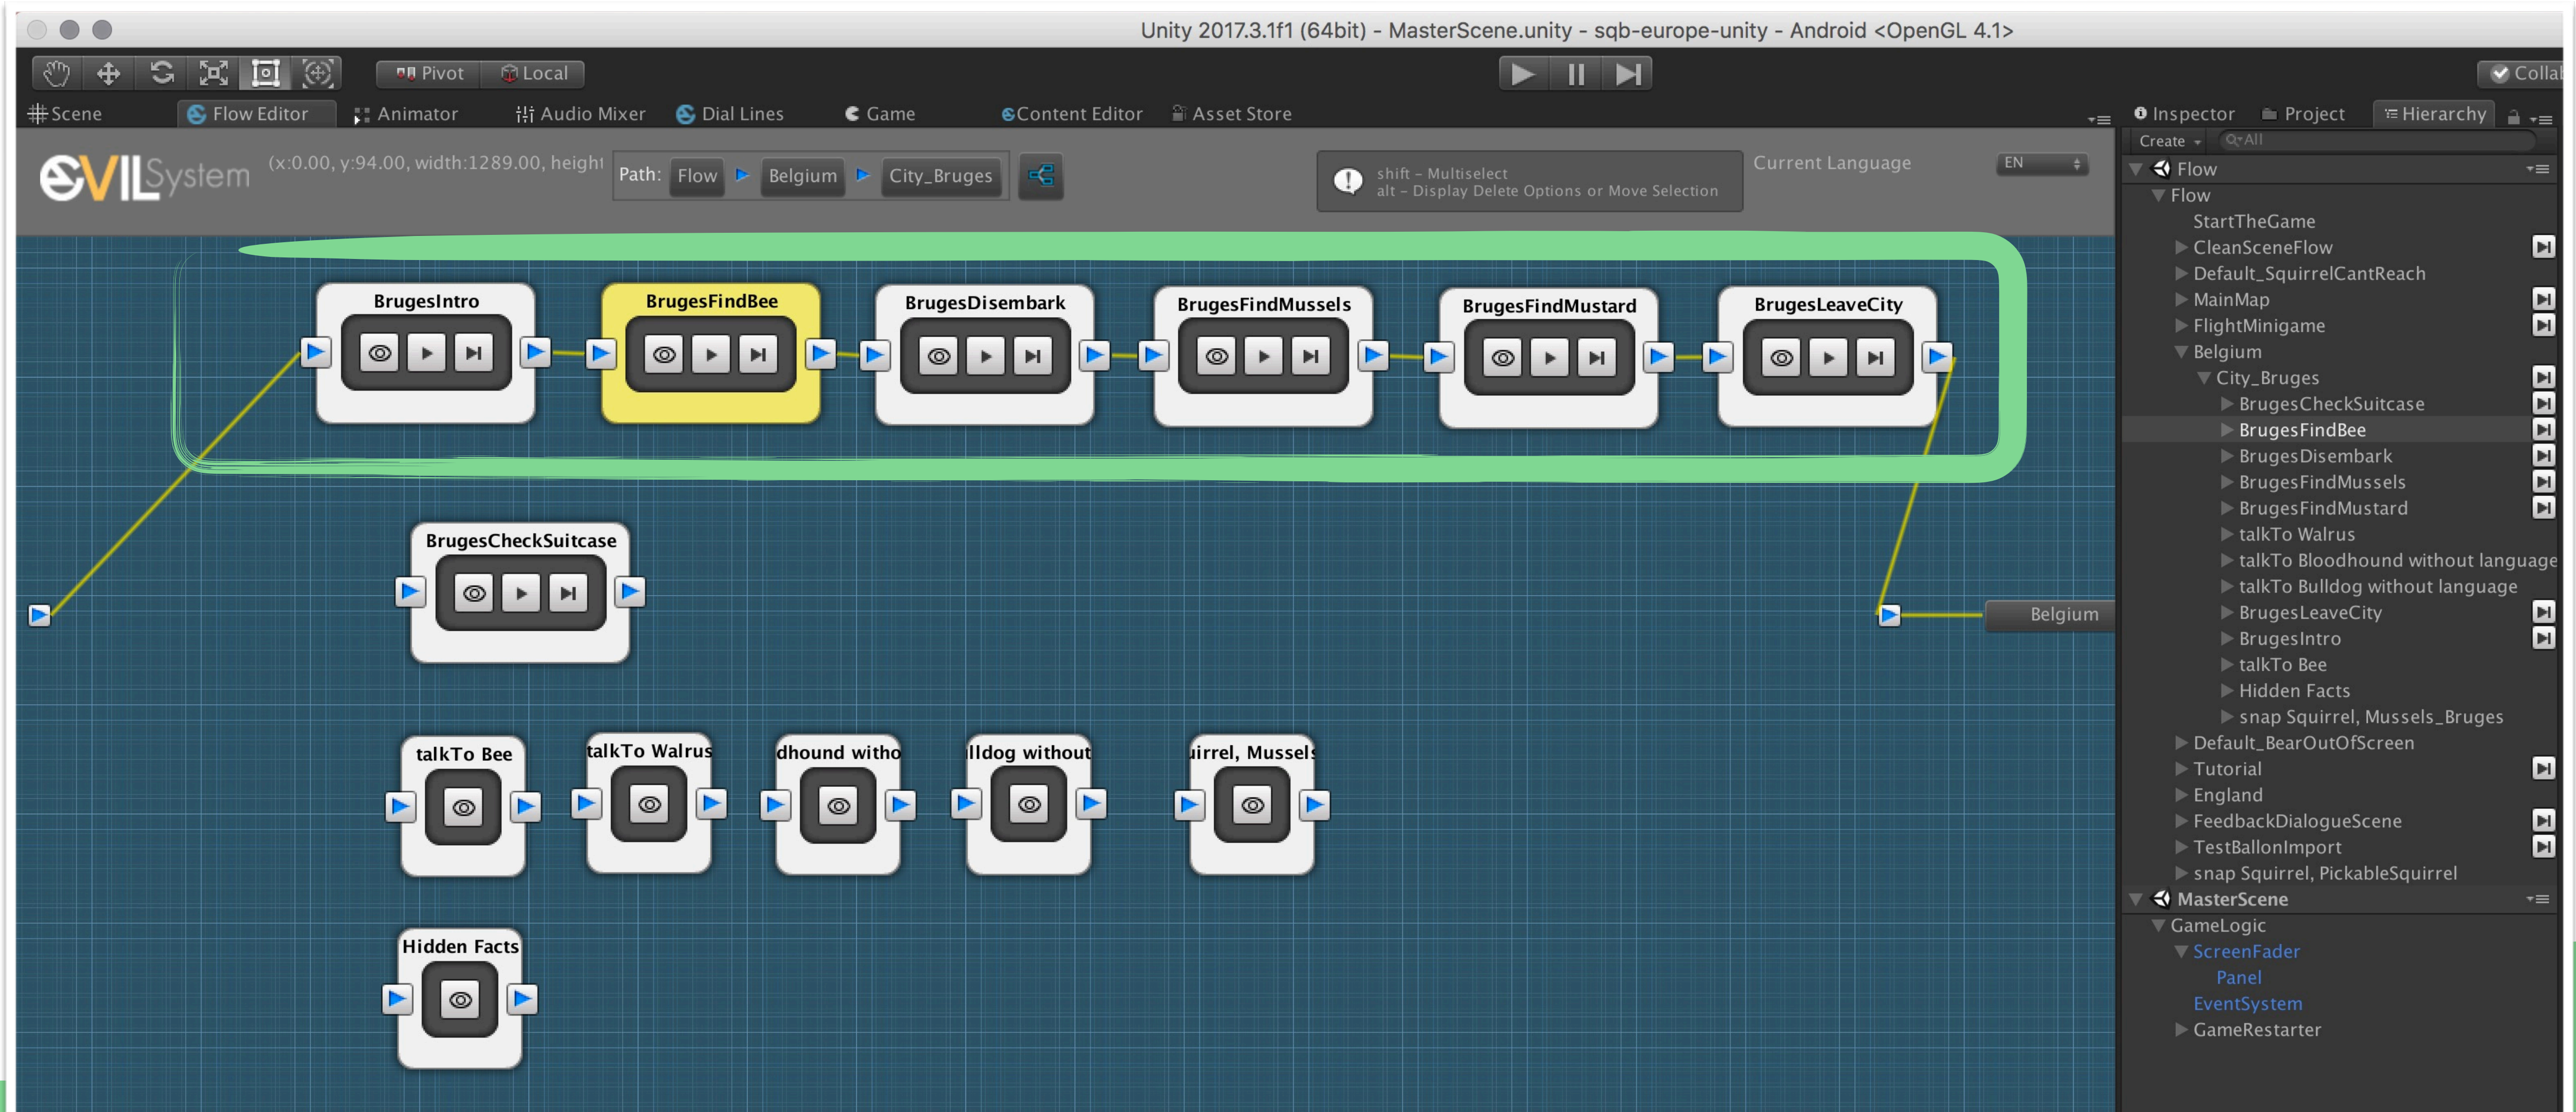

- **create** new flow element „**FindBee**“ for Bruges scene
- trigger dialogue when **Squirrel** „**talks to**“ **Bee** (click on Bee)
- **only Squirrel** can **reach** Bee
- If **Squirrel** can **reach** **Bee** start dialogue
else trigger **help dialogue** of Squirrel

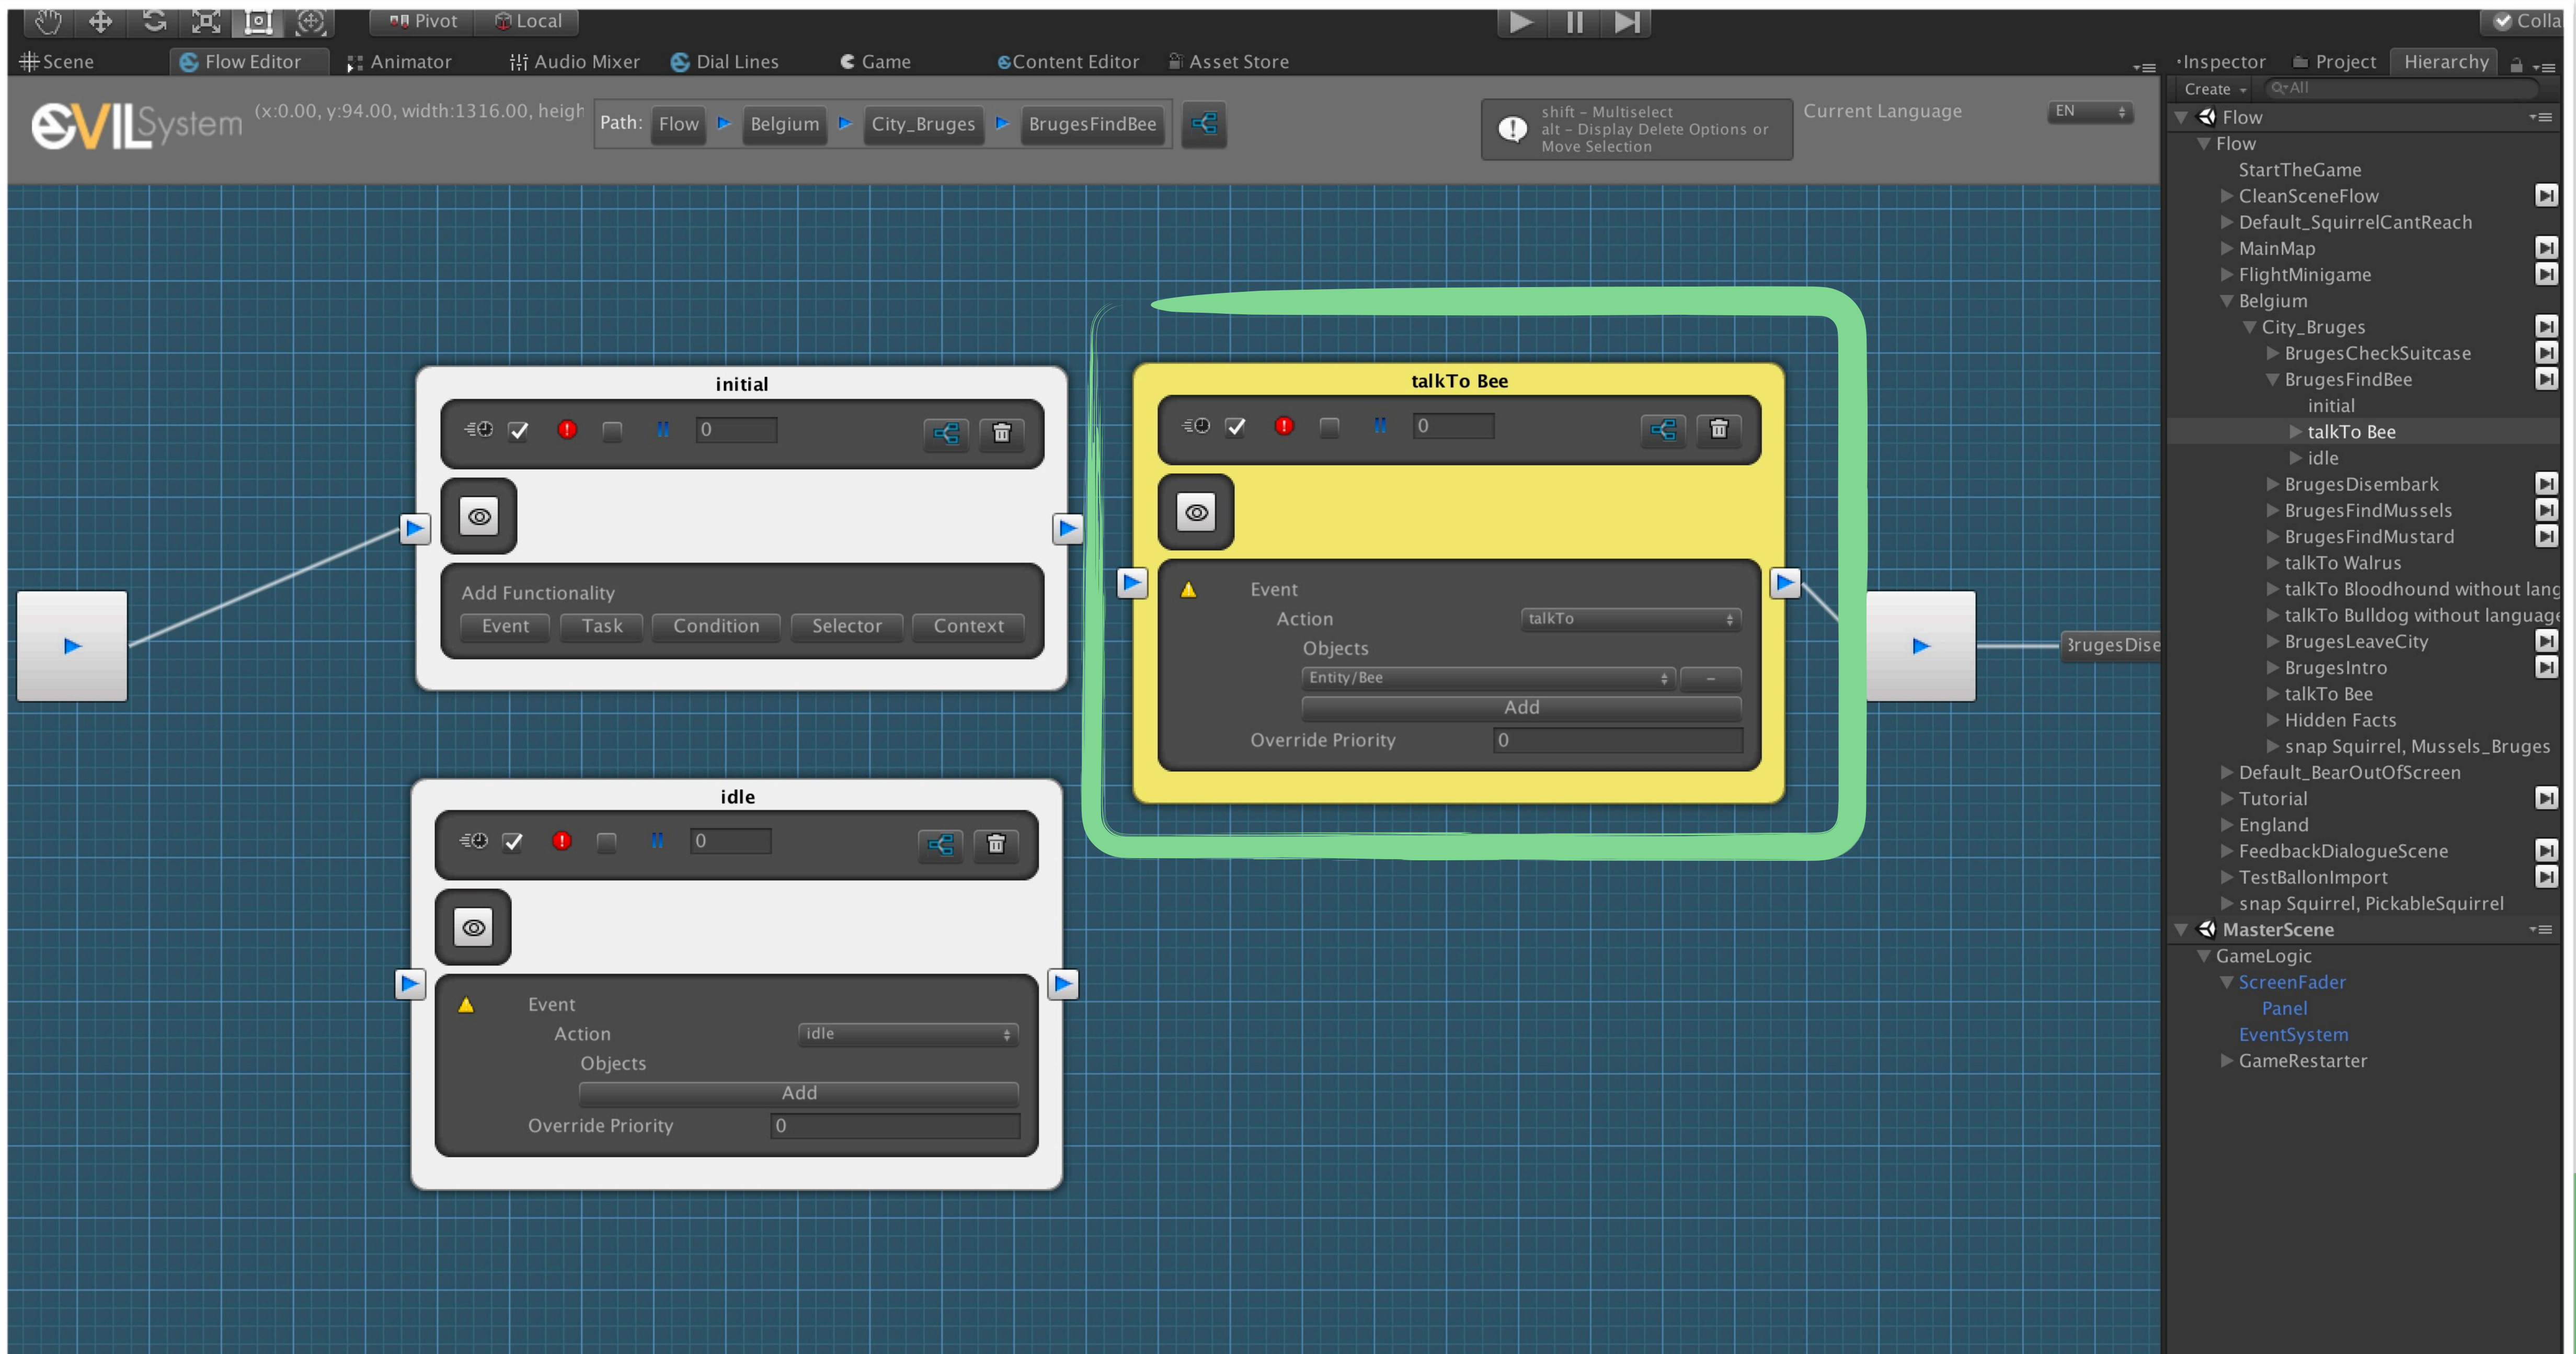

Flow Editor

(logic setup /
game design)

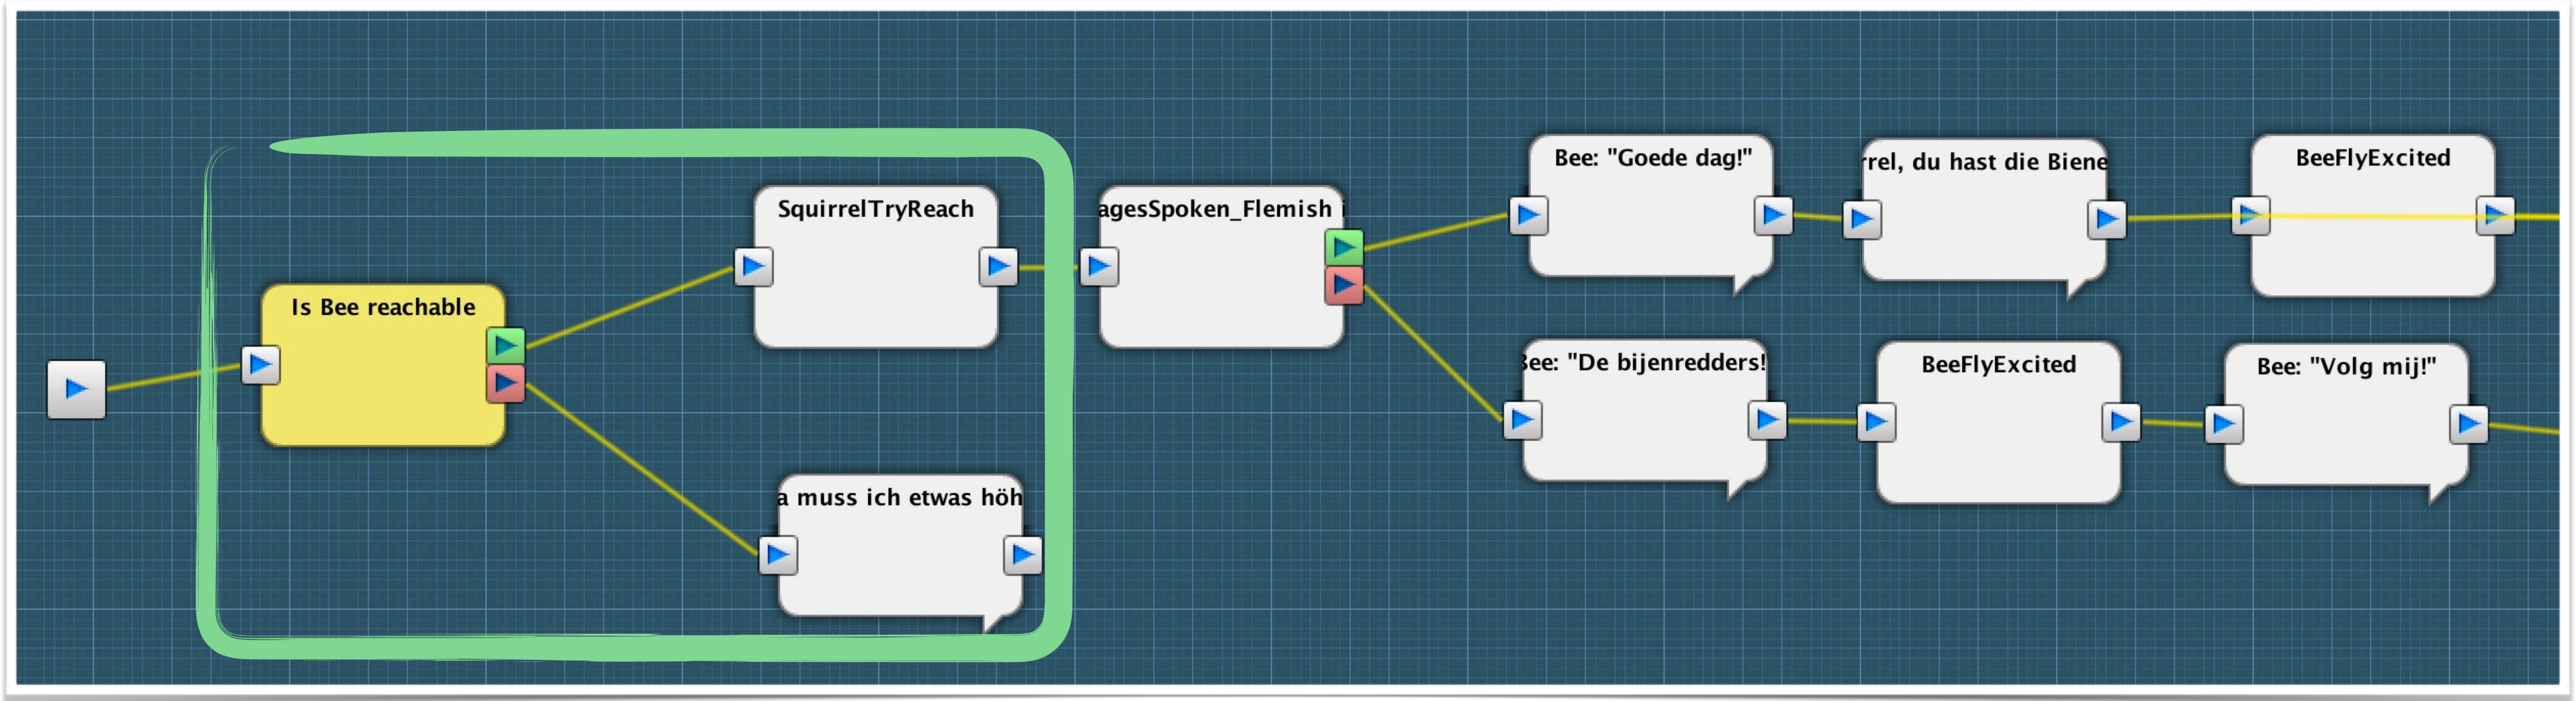

Flow Editor (logic setup)

- ~~create~~ new flow element „**FindBee**“ for Bruges scene
- trigger dialogue when **Squirrel** „**talks to**“ **Bee** (click on Bee)
- **only Squirrel** can **reach** Bee
- If **Squirrel** can **reach** **Bee** start dialogue
else trigger **help dialogue** of Squirrel

What we
love!

flexible & maintainable system

**One
accessible
place!**

enable efficient workflow + teamwork

**I can change
EVERYTHING
on my own!**

independent of specific game mechanics

**Love to reuse for
future projects!**

bonus

**Boost creativity
within the
design process.**

Junior Tool Devs

Start use your tools early!

- * It will break. It hurts. It takes time.
- * Iterate: Don't rewrite, refactor!
- * Create a **feature test project**.
- * Analyse, review, priorities tool!
- * guidelines / git / good docs
