A Simple intuitive UI?

UI Example: Scoping
between groups

Media Molecule needs you to find the differences between this picture and this picture.

They're the same picture.

Performative motion controls?

EXPECTATION

REALITY

Performative motion controls?

“Motion controls are always gimmicky and terrible”

GDC[®]

GAME DEVELOPERS CONFERENCE | July 19–23, 2021 | #GDC21

What is Dreams?

Design Expectations
vs **User Test Reality**

Teaching Dreams

Making Creation a
Game

Making Dreams
Accessible

I don't like the motion controls

Why was it you didn't like them?

They're just annoying and fiddly

What makes them feel fiddly?

I can't get the pieces where I want
them

What's happening when you try to
put pieces where you want?

When I moved the camera the thing I
was holding moved as well

GDC

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

“Easy” creation experiences

Balancing needs of the studio and new users

Balancing needs of the studio and new users

Visual Feedback

Control the amount of visual feedback the UI gives you, to tell you which scope or mode you're in, what tool you're using and so on.

MINIMAL

MODERATE

ALL

GDC[®]

GAME DEVELOPERS CONFERENCE | July 19–23, 2021 | #GDC21

Dealing with the motion controls

- Fundamental changes were made to how the camera worked
- Future on-boarding designed to highlight ways to make the motion controls easier/more precise
- Move away from getting players to make neat/blocky things early on – it wasn't what Dreams is best at anyway.
- Motion controls are completely new to most players, so regardless of on-boarding will always take some time for them to become comfortable

Design Expectations vs User Test Reality: Takeaways

Developers

- Get researchers and external people involved early, you have to face reality at some point
- Compromising for new players' experience is important, but it doesn't need to come at the expense of power users - be flexible

Research

- Dig! Don't settle for the shallow responses or questionnaire feedback alone for complex or nuanced questions

How to teach Dreams?

Technical challenge

The screenshot shows the Dreams game interface. At the top, the 'dreams' logo is on the left, and a settings gear icon and 'Index' link are on the right. A left-hand menu lists various actions: 'Start' (highlighted), 'Moving the camera', 'Changing the camera', 'Highlighting objects', 'Camera modifier', 'The options menu', 'Switching modes', 'Resetting the imp', and 'Finish'. The main area is titled 'Current tutorial: Controlling the IMP' and features a large image of a person's hands holding a DualShock 4 controller, with a small 'IMP' character visible in the game world. Below the image, there are two sections: 'GOALS' with a bullet point 'Learn about the Imp and motion control', and 'INSTRUCTIONS' with two numbered steps: '1. Rotate and tilt the controller' and '2. Do not use buttons or sticks'.

Failing quickly

Expectations

Reality

The initial results

- ❖ Players struggled to split their attention between a laptop screen and the game
- ❖ Complex pieces and levels were very easy to break or get lost in

BUT

- ✓ Starting with a pre-built scene gave players a clear starting point
- ✓ Breaking tutorials down into short steps meant players weren't totally overwhelmed

Start Dreaming - Teaching the basic controls

Information overload - The steps taught in Start Dreaming

1. Moving the camera and imp
2. Grabbing and moving objects
3. Undo + Redo
4. Delete tool
5. Rotating with the touchpad
6. Rotating with L2
7. "Grab-Cam"
8. Searching for elements
9. Clone tool
10. "Shift" actions and strafing
11. Flipping objects
12. Resizing
13. Selecting objects
14. Grouping objects
15. Navigating groups
16. Shortcuts for groups

Tutorials lacked clearly defined goals

Moving the camera

Changing the camera

Highlighting objects

Camera modifier

The options menu

Switching modes

Resetting the imp

GDC

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

A success story

“Platforming 1”

The results

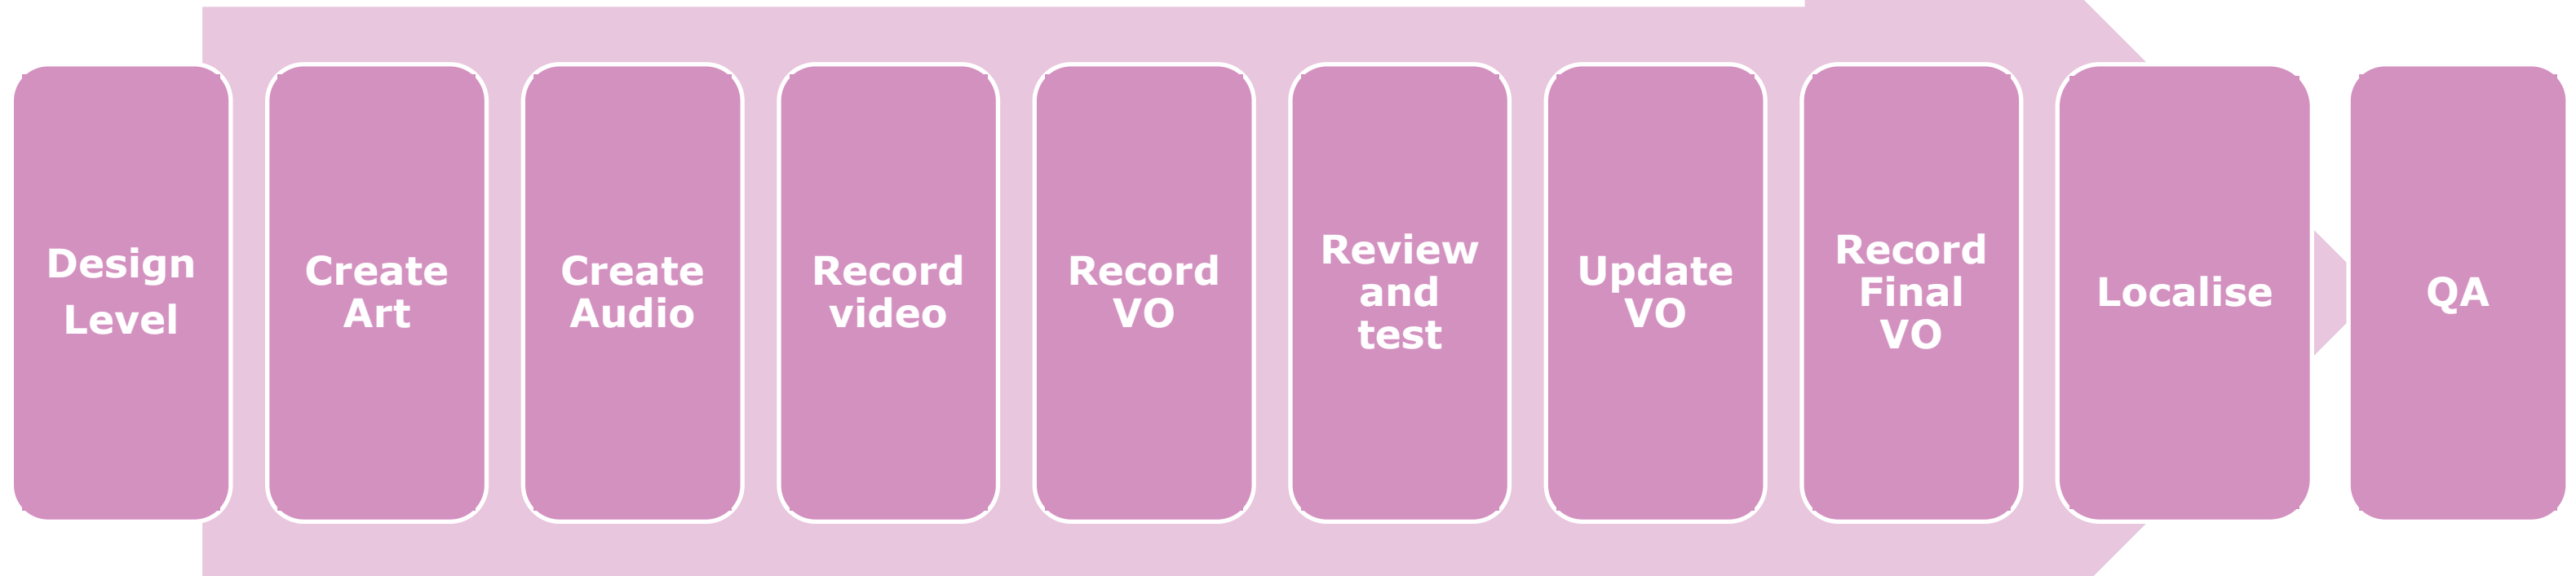

- ✓ The built in PiP player made it easier for players to focus on the steps
- ✓ “Frozen” levels limited players ability to mess everything up!
- ✓ *Some* tutorials are working well - “Platforming 1”

BUT

- ❖ The goal of some tutorials was vague and inconsistent
- ❖ The basic controls were still overwhelming to learn

Tutorial production timeline

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

Information de-overloaded

Start Dreaming 1

- Basic camera movement
- Using the motion controls
- Grabbing and moving objects
- Undo + Redo
- Delete tool
- "Grab-Cam"
- Searching for elements

Start Dreaming 2

- Reinforce moving objects
- Rotate
- Resize

Start Dreaming 3

- Clone tool
- Multi-cloning

Start Dreaming 4

- Selecting objects
- Grouping
- Scoping

Takeaways

Development

- The sooner tutorials are developed the better
- Know when to change strategy, even if it means more work

Teaching creative tools

- Break down larger concepts into digestible steps
- Have a tangible goal for players to aim for
- Don't overload players' attention or memory

What is Dreams?

Design Expectations vs User Test Reality

Teaching Dreams

Making Creation a Game

Making Dreams Accessible

Still a long way to go...

Getting to the root of the issues

- Lots of feedback from multiple channels to process:

Media Molecule 
@mediamolecule

Follow

Game Analytics

“Hands off” Testing

Quick discoveries...

- Creation is mentally draining
- The Standard “playtest” processes didn’t work for Dreams

q5b8602a1c3-Gben	Awesome!	The prebuilt levels are so inspiring. Ancient temple is beautiful	Homespace or main menu
qf5b9fd1417-Gben	Frustrating	I got locked into a tool and it was not clear on how to get out of it.	tutorial: Coat, Style and Effects, step: 3
q5b8602a1c3-Gben	Frustrating	After creating a sculpture, I cloned and grouped it so I could select the clones as if they were a single sculpture. It appears though that I can't edit the grouped-together sculpture as a whole.	tutorial: Sculpting, step: 4
q50d3e1a443-Gben	Awesome!	The Last Upgrade was really awesome. Defintely add more levels.	playing: The Last Upgraded
q5b8602a1c3-Gben	Awesome!	Discovered there is actually a grid snap tool	editing from scratch

Integrating with Telemetry - Getting ratings

Player finishes a level and telemetry posts a "level exit" event

App listens for that event and prompts players with a question whenever they finish a level

A "rating" event is posted back to the server which can be seen live and analysed later

GDC[®]

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

Testing revealed different kinds of Players and Creators

Types of creator

Hardcore Creators

ROBLOX

MINECRAFT
(Creative mode)

Specialist Creators

Dabbling Creators

SUPER
MARIO MAKER 2

MINECRAFT
(Classic)

Testing revealed different kinds of Players...

UGC Appreciators

- Excited by a variety of unique content
- Enjoy games, videos, music, animations
- Willing to overlook "rough edges"

Traditional Gamers

- Only looking for "games"
- Expect high quality "complete" experiences
- Unforgiving of bugs or lack of polish

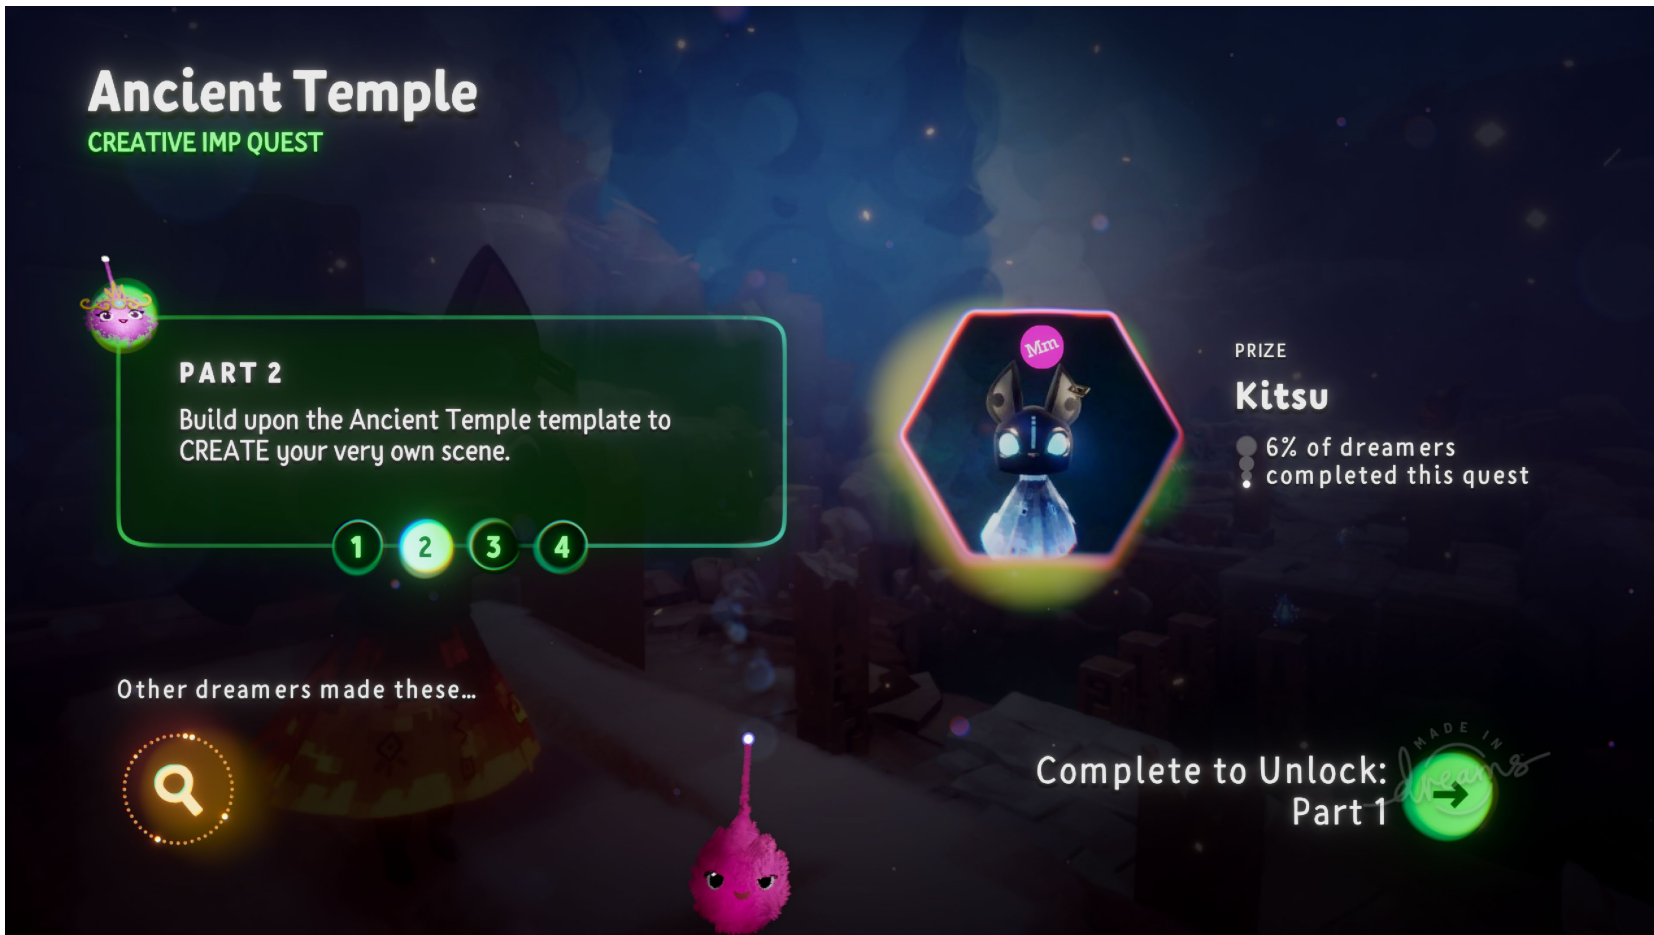

Gamified on-boarding - The basics

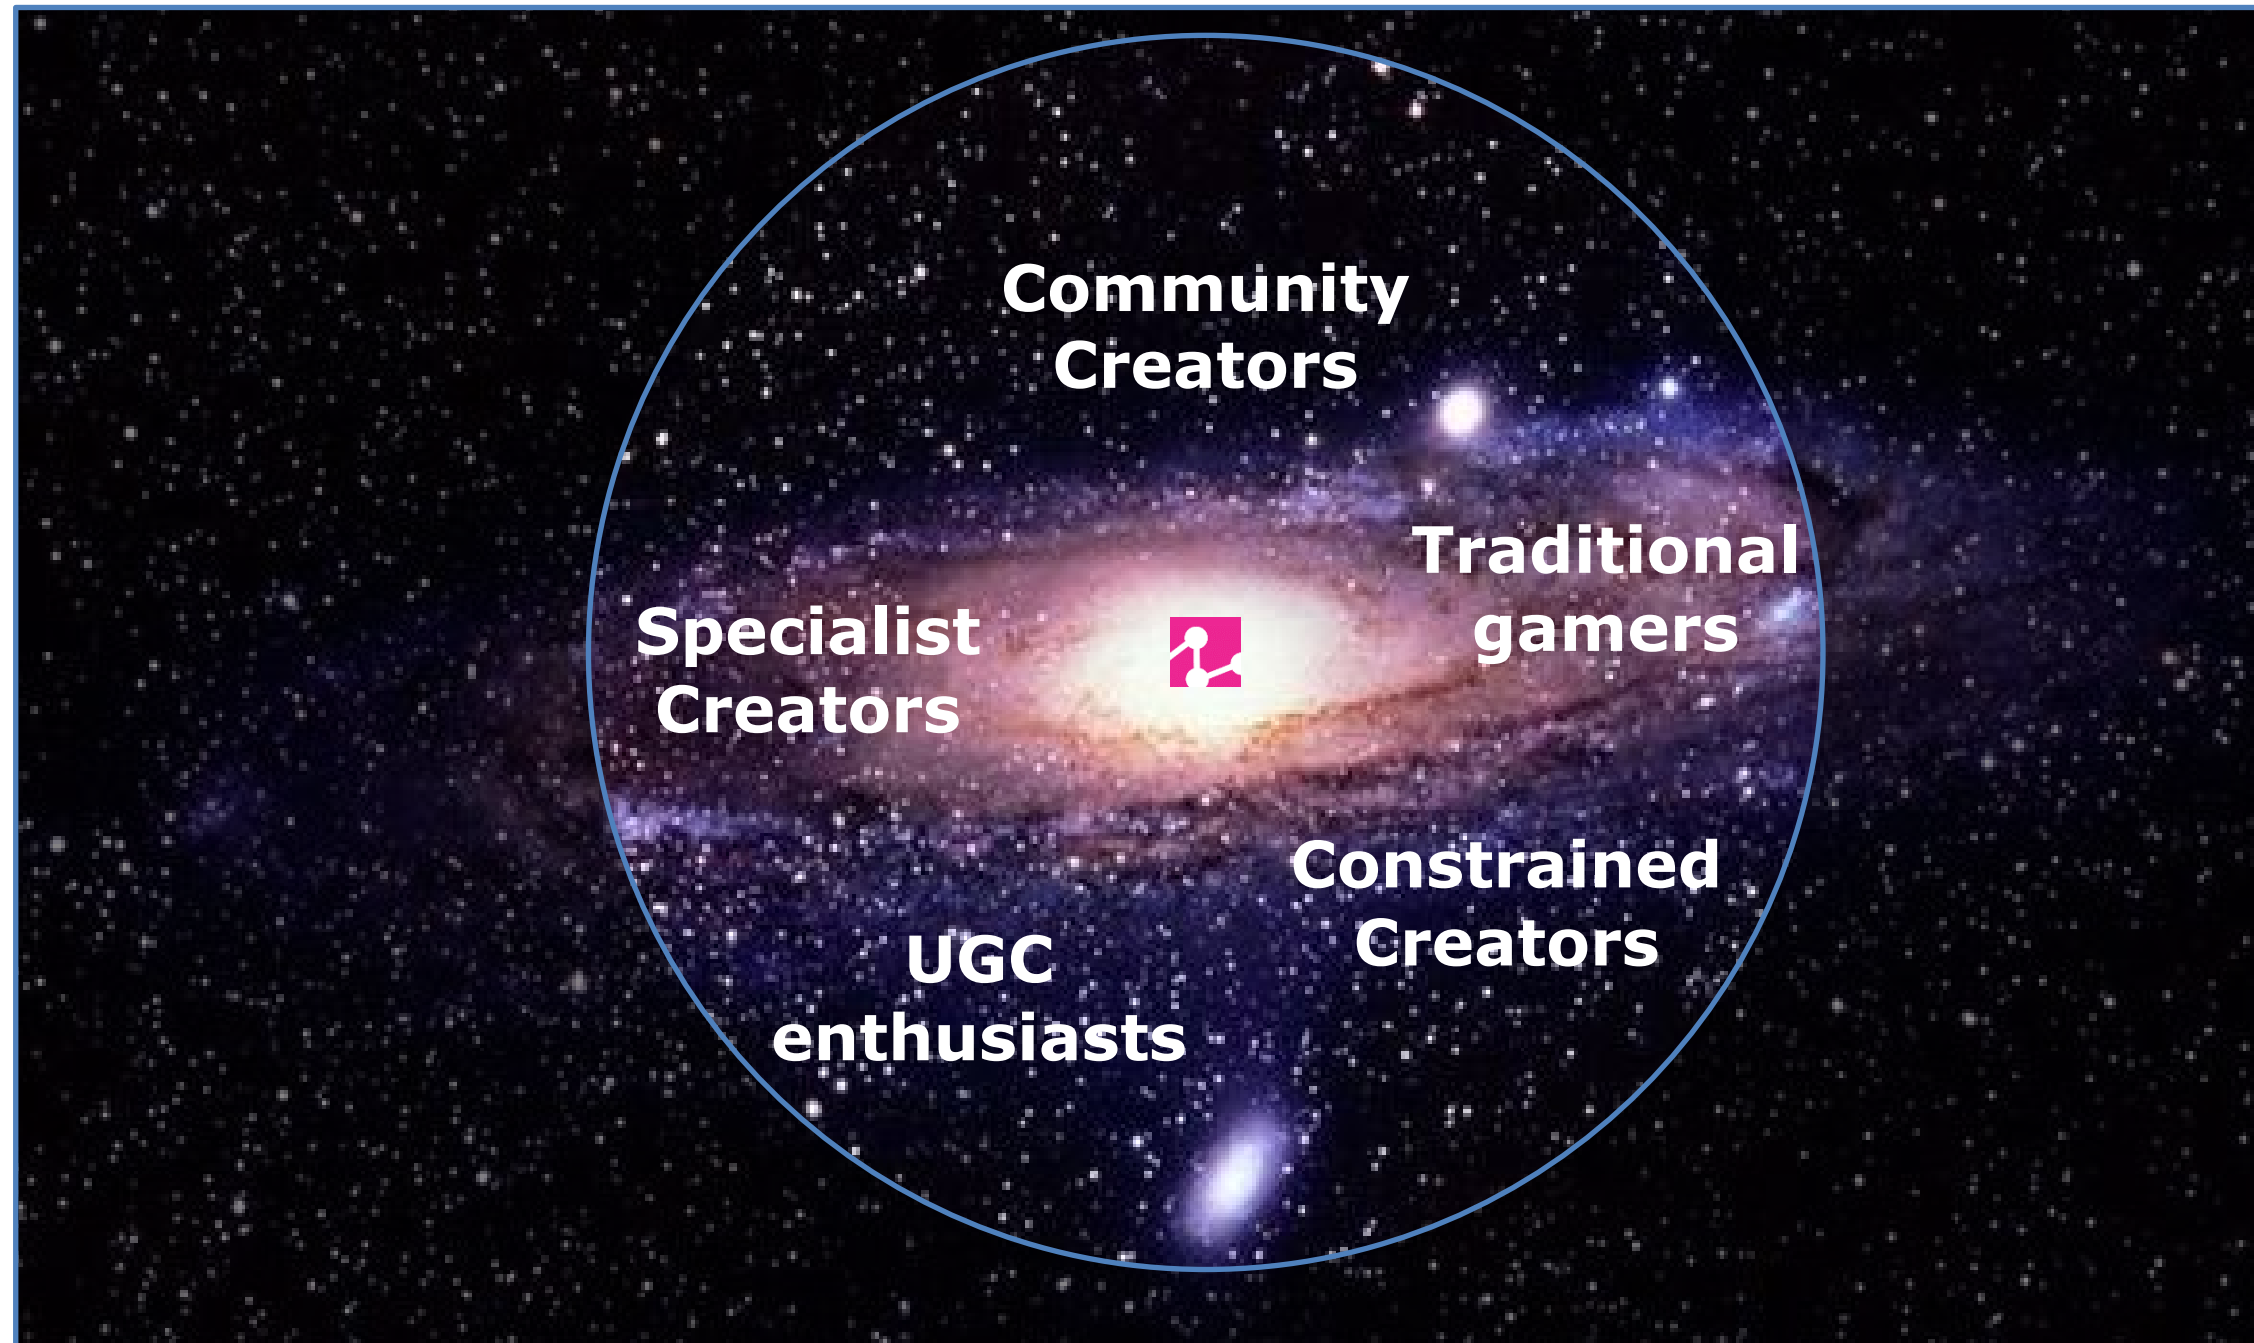

Story campaign

Creative imp quests

Real Launch...

Takeaways

Dev

- Leverage all the feedback you can during early access (Data, Forums, UR)
- Understand who your players are in depth
- Beware the blank canvas in creative games, it can easily overwhelm and put off players

Research

- Telemetry isn't just for dashboards and graphs after a test, utilise it as a live feed to enhance your research
- Build your own tools (you don't need to be a programming pro)

GDC

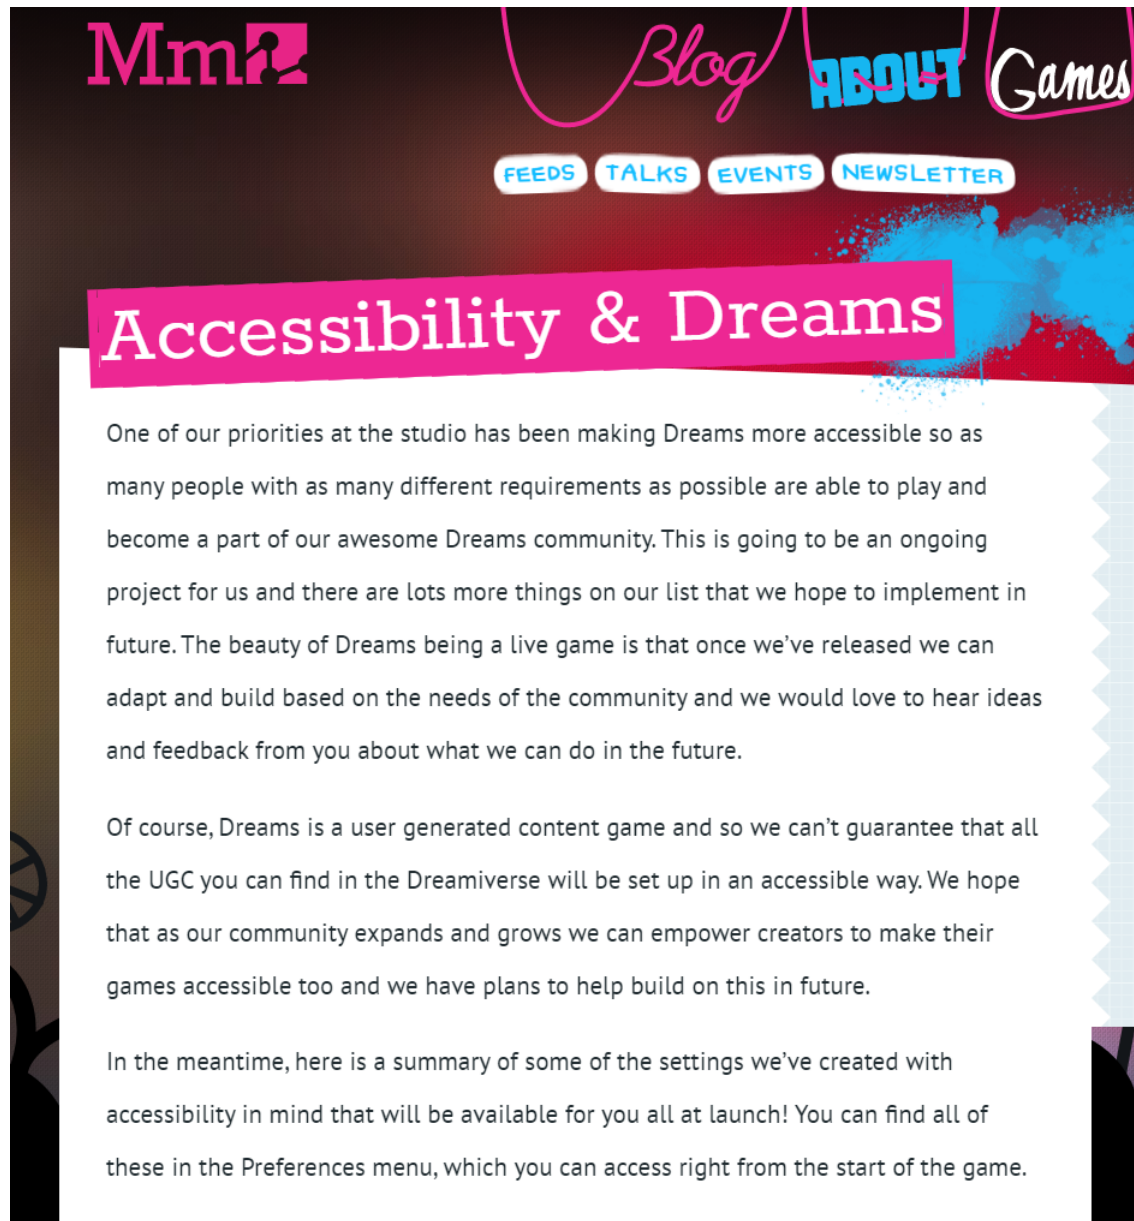

GAME DEVELOPERS CONFERENCE | July 19-23, 2021 | #GDC21

The results

- Lack of full re-map limited accessibility
- It wasn't always clear how or when the settings were useful to players!

Additional considerations

Mm? Blog ABOUT Games

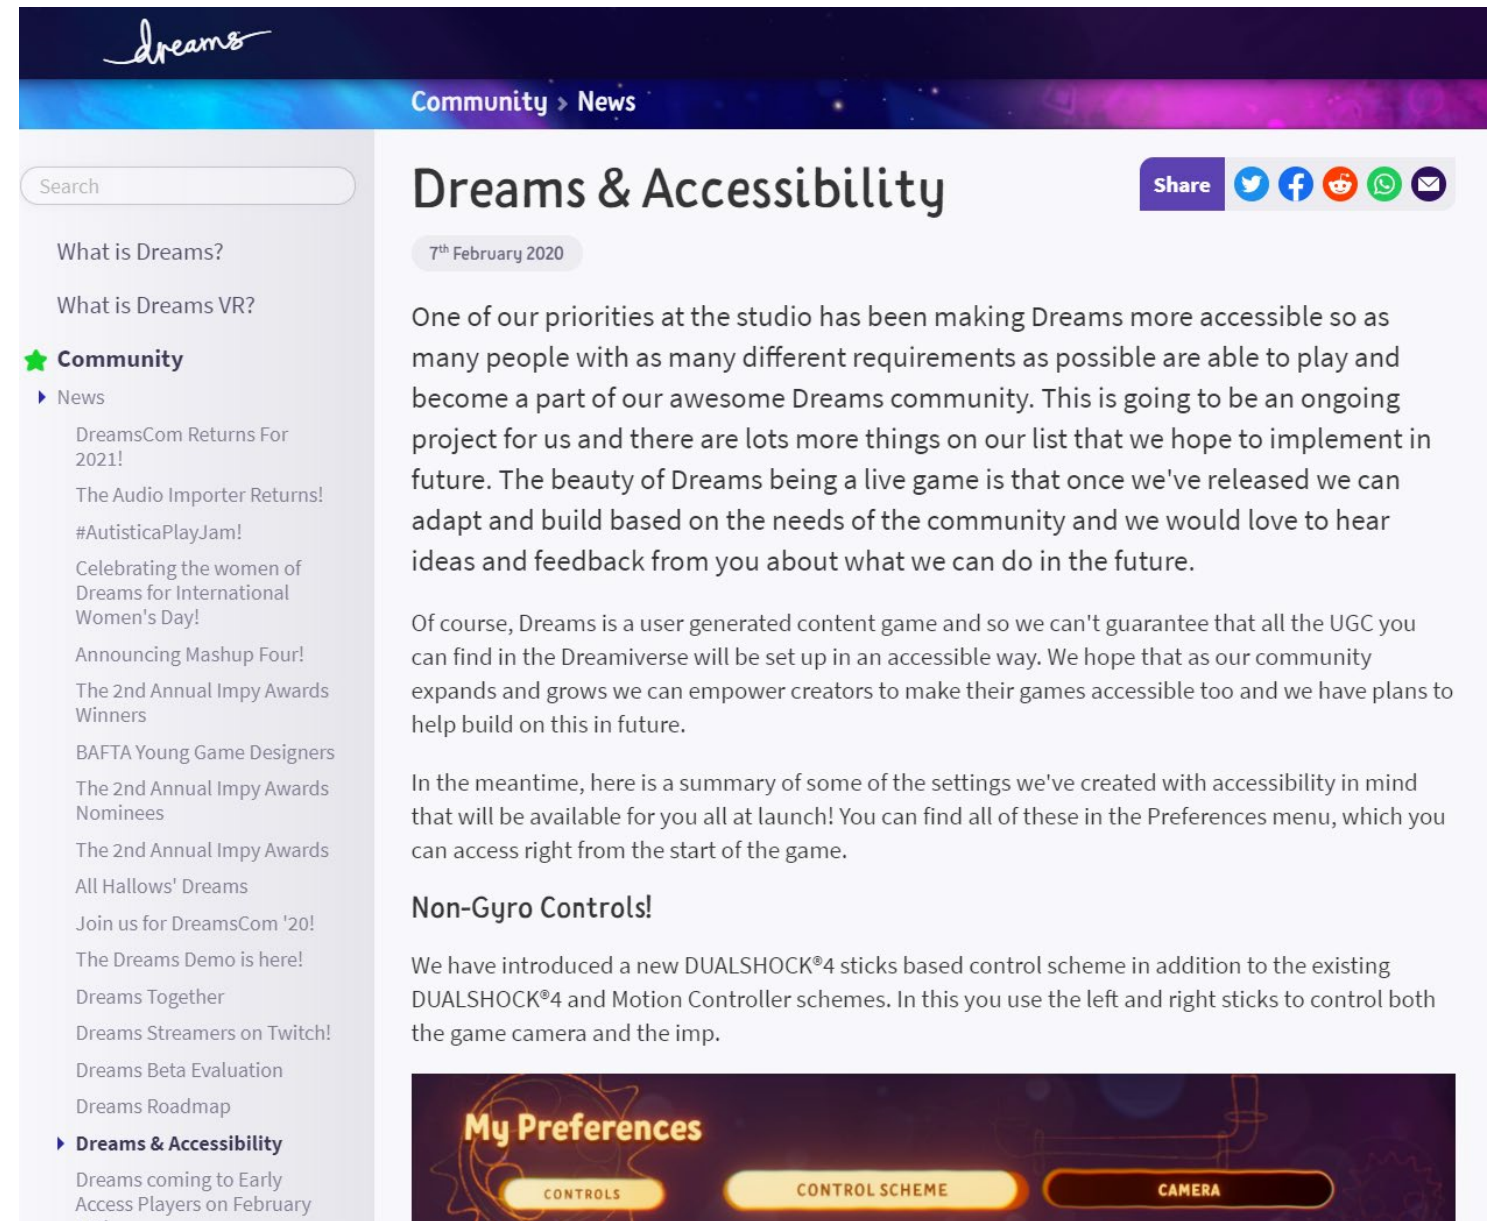

FEEDS TALKS EVENTS NEWSLETTER

Accessibility & Dreams

One of our priorities at the studio has been making Dreams more accessible so as many people with as many different requirements as possible are able to play and become a part of our awesome Dreams community. This is going to be an ongoing project for us and there are lots more things on our list that we hope to implement in future. The beauty of Dreams being a live game is that once we've released we can adapt and build based on the needs of the community and we would love to hear ideas and feedback from you about what we can do in the future.

Of course, Dreams is a user generated content game and so we can't guarantee that all the UGC you can find in the Dreamiverse will be set up in an accessible way. We hope that as our community expands and grows we can empower creators to make their games accessible too and we have plans to help build on this in future.

In the meantime, here is a summary of some of the settings we've created with accessibility in mind that will be available for you all at launch! You can find all of these in the Preferences menu, which you can access right from the start of the game.

Dreams & Accessibility

7th February 2020

One of our priorities at the studio has been making Dreams more accessible so as many people with as many different requirements as possible are able to play and become a part of our awesome Dreams community. This is going to be an ongoing project for us and there are lots more things on our list that we hope to implement in future. The beauty of Dreams being a live game is that once we've released we can adapt and build based on the needs of the community and we would love to hear ideas and feedback from you about what we can do in the future.

Of course, Dreams is a user generated content game and so we can't guarantee that all the UGC you can find in the Dreamiverse will be set up in an accessible way. We hope that as our community expands and grows we can empower creators to make their games accessible too and we have plans to help build on this in future.

In the meantime, here is a summary of some of the settings we've created with accessibility in mind that will be available for you all at launch! You can find all of these in the Preferences menu, which you can access right from the start of the game.

Non-Gyro Controls!

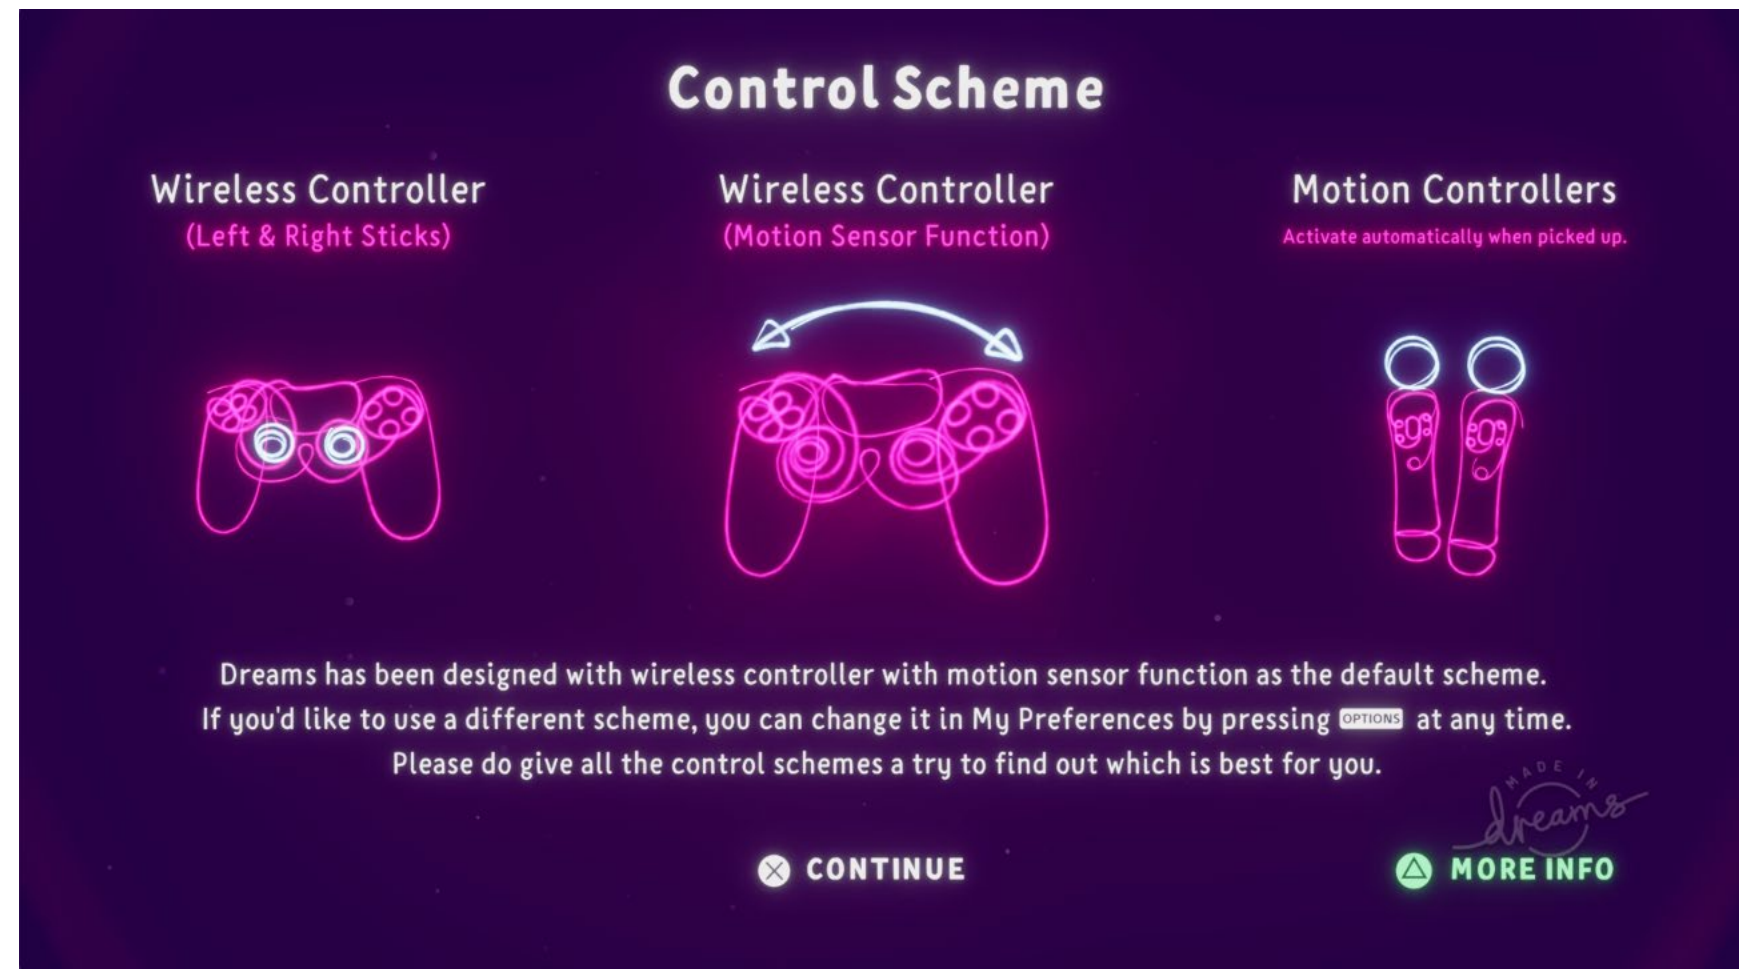

We have introduced a new DUALSHOCK®4 sticks based control scheme in addition to the existing DUALSHOCK®4 and Motion Controller schemes. In this you use the left and right sticks to control both the game camera and the imp.

My Preferences

CONTROLS CONTROL SCHEME CAMERA

Final fixes

Enable UI Effects

When on, UI elements in the game have various effects, like animation, chromatic aberration and parallax. When off, these are reduced or removed.

On

Takeaways

Dev

- Get experts and the accessibility community involved
- Have accessibility advocates across diverse teams

Research

- Accessibility trained researchers can catch potential issues throughout development
- Talk to people who have experience of accessibility testing
- Use testing to understand the effectiveness of accessibility features

Summary

- Test early and face the issues head on before it's too late
- Getting tutorials right takes iteration
- Understand your players and give them what they want
- Make the accessibility a core part of the development process

Thanks to Panos, Luis and all the PlayStation research team!

And thanks to everyone at Mm, particularly Constantin who helped put the presentation together and Dave C and Jamie C who helped find us nice assets!
