

# TABLE TRENCHES

- Design Challenges and Opportunities in Mobile AR
  - A Table Trenches Retrospective

**Blake Gross**

**DB Co-Founder**

Former senior tech lead  
developing 1<sup>st</sup> Party Enterprise  
HoloLens Apps at Microsoft  
(Layout, Product Visualize,  
UnityGLTF), engineer on Xbox  
Live.

**Dustin Kochensparger**

**DB Co-Founder**

Senior Producer at Bungie  
developing Destiny 2

Focused on Production, Design  
at DB

# Why Make AR Games?

1. AR is the next big disruptive technology market
2. Consumer AR glasses need content
3. New frontier of exploring gaming within spatial computing

# TABLE TRENCHES

Casual RTS designed from the ground up for AR

Scan table, couch, or floor and create a playspace that's scaled to players environment

Capture towers, deploy units, and fight to the last in fast paced strategy action!

# Gameplay Video

# Hero Idea – The Magic of AR

Environmental adaption

Dynamic map

Immersive in environment

Seamless viewing

# Hero Idea -> Game

What can the current technology do well?

# Hero Idea -> Game

What kind of gameplay  
could we make with this  
technology?

# Hero Idea -> Game

Looked to strategy game genre

Scoped to team ability, dev costs

# Constraints – Battery Life

**Problem:** AR drains mobile device batteries fast

**Solution:** Short match time

# Constraints – Phone as Portal

**Problem:** Game interface is part of the 'window' into the gameplay – needs to mesh well

**Solution:** Minimal UI; balance world and screen space UI

# Constraints – Confusing Setup

**Problem:** Users unfamiliar with AR tech, could get stuck in setup

**Solution:** Optimize plane setup flow

# Plane Scan - Scale vs Aspect Ratio

Scale – Is content visible

Aspect Ratio- How does content fit to plane

# Plane Scan - Time to Play

- Largest retention drop-off
- Balance “have fun” with get to experience

# Plane Scan - Adjustment Tools

- Plane find imprecise
- Translation/Scale/Rotate/Aspect Ratio Tools
- Known mobile conventions vs on-screen UI

# Co-Located Play

- Goal: No online connection required
- Difficult to get shared space working seamlessly
- Cut-from build last minute
- LiDAR and newer solutions making this easier

# It's all iterative!

- Early versions different from the final product
  - Experimented with 2D sprite for units
  - No lanes – units could move anywhere on the map
- Agile-style production
  - Weekly team feedback playtests
- Don't be afraid of change – embrace it!

你的 桌子 是  
戰場

# Market Considerations

- AR is a global market
- Limited press appetite for AR content
- Market is still learning what AR even is, how to show it to customers
- Bespoke platforms powerful for discoverability (Snapchat, Spark)

# What can we do better?

- Better plane find flow
- Additional user hooks
- Online multiplayer

# What's next?

- Table Trenches on Additional Platforms
- Experimentation with Emerging Headsets
- Building for “all-in-one” platforms
- LiDAR!
